(section revised JANUARY 2006)

Physiologists are employed by:

- universities and colleges
- hospitals
- institutes related to sports health
- pharmaceutical and biotechnology companies
- firms working in rehabilitation medicine.

Physiologists are part of the larger National Occupational Classification 2121: Biologists and Related Scientists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,100 Albertans are employed in the Biologists and Related Scientists occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since physiologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for physiologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Biologists occupational group working part-time or full-time earned from **$29,400 to $103,200 a year.** The average salary was **$64,800 a year.**

Physiotherapist

Produced FEBRUARY 2005

Physiotherapists work with patients to plan and carry out individually designed physical treatment programs to restore function and prevent disability from disease, trauma or injury.

NOC Number(s): 3142
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M I S**

Duties

Physiotherapists may focus on particular clinical areas such as orthopedics, cardiopulmonary and cardiovascular disorders, neurology, geriatrics, burns or sports injuries, rheumatology, oncology, pediatrics and obstetrics. However, in general, they:

- assess physical and functional abilities to identify problems
- develop intervention programs to address problems
- carry out programs that may include patient education, exercises, mobilization or other physical approaches such as electrotherapy or hydrotherapy
- maintain clinical and statistical records
- work in multidisciplinary teams and consult with other professionals as required
- develop and implement screening and preventive health promotion programs
- conduct research in physiotherapy
- provide related education and consulting services.

Working Conditions

Physiotherapists work in a variety of settings including heath clinics, fitness centres, hospitals and long term care facilities. Those who provide direct patient care do a great deal of bending, stretching, standing and reaching. They may have to help transfer patients who have limited or little mobility, and lift and adjust equipment weighing up to 25 kilograms.

Physiotherapists generally work weekdays; however, evening and weekend work is required in many settings.

Personal Characteristics

Physiotherapists need the following characteristics:

- good health and physical stamina
- good co-ordination and manual dexterity
- analytical and problem solving abilities
- the interpersonal skills, patience and understanding required to work with sick and disabled people
- good organizational skills
- good communication skills in person and in writing
- the ability to motivate people.

They should enjoy developing and implementing innovative health promotion programs and dealing with people.

Educational Requirements

Physiotherapists must have a university degree in physiotherapy and complete a period of supervised practical training. By 2010, Canadian universities will offer entry-level education programs in physiotherapy at the master's degree level.

In Alberta, the **University of Alberta** in Edmonton offers a two and a half year, course-based Master of Phyical Therapy (MPT) program that prepares students for entry to physical therapy practice. The entrance requirement is completion of a four year bachelor's degree program with full-year courses in English, human physiology and psychology, and half-year courses in statistics and human anatomy. Students planning their university studies are strongly advised to consult the University of Alberta calendar or website for more detailed information about course requirements.

The University of Alberta Faculty of Rehabilitation Medicine also offers thesis-based Master of Science in Physical Therapy and doctoral (PhD) programs.

Other Requirements

Under Alberta's Physical Therapy Profession Act, only registered members of the College of Physical Therapists of Alberta (CPTA) may call themselves Physiotherapists or Physical Therapists, or use the words physiotherapy or physical therapy to describe or refer to their practice, occupation, profession or business.

Employment and Advancement

(section revised JANUARY 2006)

Physiotherapists may work in settings such as:

- child development centres
- community health centre
- fitness centres, health clubs or spas
- government and health planning agencies
- home care
- nursing homes and other long term care facilities
- hospitals and rehabilitation centres
- physiotherapy clinics
- schools
- sport facilities.

Physiotherapists may advance to supervisory and management positions, or move into university teaching and research positions.

In Alberta, people employed as physiotherapists work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,750 Albertans are employed in the Physiotherapists occupational group which is expected to grow 3.4 to 4.4 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 80 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Physiotherapists occupational group working part-time or full-time earned from **$24,500 to $145,200 a year.** The average salary was **$55,900 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Plasterer

Produced DECEMBER 2003

Plasterers select, mix and apply gypsum, cement and acrylic mixtures to exterior and interior walls and ceilings to produce plain or decorative surfaces that are fire, weather or sound resistant.

NOC Number(s): 7284.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O i**

Duties

On the exterior surfaces of buildings, plasterers apply stucco and texture it or embed it with dolomite or quartzite to produce a decorative finish. Or, they may apply exterior insulated finish systems by spreading and texturing thin coats of copolymer.

On interior surfaces, plasterers may use different procedures to apply plaster. When the foundation for the plaster is metal lath (a supportive wire mesh), plasterers:

- apply a preparatory or scratch coat to the lath using a spray gun or a trowel
- broom the surface of the scratch coat so the next coat will adhere to it
- apply a brown coat by hand or with a plaster gun and prepare the surface to accept the appropriate finish
- apply a very thin white coat that may be smoothly finished, textured or ornamental
- brush on water periodically as the final coat is hardening.

When the foundation is cinder block or gypsum lath, a preparatory coat often is not necessary.

Some plasterers also:

- set precast ornamental plaster into walls and ceilings
- apply a single coat of plaster material over interior masonry surfaces, specially manufactured wallboard or drywall prepared with a bonding agent
- do drywall taping
- do industrial fireproofing.

Working Conditions

Plasterers work primarily outdoors stuccoing so there is less work available in the winter. Some plasterers work indoors on interior surfaces. They may work in confined spaces, in damp or dusty conditions, or on benches or from scaffolds. They usually work a 40 hour, five day week with some overtime required to meet construction schedules.

Lifting up to 25 kilograms is routinely required.

Personal Characteristics

Plasterers need the following characteristics:

- strength and stamina
- manual dexterity
- the ability to work from ladders and scaffolds.

They should enjoy working outdoors with little direction or supervision.

Educational Requirements

Plasterers learn **on the job**. They usually start as helpers carrying materials, setting up scaffolds and mixing plaster. Mastering the required sweep and pick-up trowel motion and other plastering skills takes patience and practice.

Employers generally prefer to hire high school graduates and expect plasterers to provide their own tools.

Employment and Advancement

(section revised JANUARY 2006)

Most plasterers are employed by independent contractors working on new construction or alteration jobs. Some plasterers are self-employed and contract their services for smaller jobs. In smaller centres, plasterers may also work as drywall tapers and wall board applicators.

Experienced plasterers may advance to supervisory positions or estimator positions. With additional training, they can transfer their skills to related occupations such as cement finisher, drywall installer, bricklayer, lather-interior systems mechanic or tilesetter.

Plasterers are part of the larger National Occupational Classification 7284: Plasterers, Drywall Installers and Finishers and Lathers. In Alberta, most people employed in this classification work in the **Construction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the Construction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 5,450 Albertans are employed in the Plasterers, Drywall Installers and Finishers and Lathers occupational group which is expected to grow 1.8 to 2.8 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 90 to 160 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since plasterers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for plasterers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Plasterers, Drywall Installers and Finishers and Lathers occupational group working part-time or full-time earned from **$23,400 to $70,700 a year.** The average salary was **$51,000 a year.**

© Government of Alberta, Human Resources and Employment

Plastics Processing Technician

Produced FEBRUARY 2004

Plastics processing technicians set up, monitor, troubleshoot and optimize plastics processing equipment (including injection moulding and extrusion equipment).

NOC Number(s): 2233.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M i**

Duties

In injection moulding, molten plastic material is injected into a steel mould to form individual three-dimensional products such as industrial components, domestic goods or medical parts. Softened plastic quickly cools and hardens in the mould. Then the mould opens, the part is ejected and the process is repeated to produce another part.

Extrusion processes produce continuous products such as plastic pipe, film and sheet goods, or wire and cable covering. Softened plastic material is forced through a metal die to produce the desired shape.

Duties and responsibilities vary depending on the process involved but, in general, plastics processing technicians:

- monitor the operation of automated equipment and record product measurement and output rates
- adjust process conditions to correct part defects, meet product specifications and production requirements, and optimize productivity
- maintain and interpret quality control systems
- set up equipment and troubleshoot problems
- safely start up and shut down automated equipment
- properly install, maintain, handle and store injection moulds and extrusion dies.

Working Conditions

Plastics processing technicians work in manufacturing plants that often operate 24 hours a day. They work shifts that may include nights, weekends and holidays. Working in an industrial environment often requires wearing safety gear such as eye and ear protection and steel-toed boots to reduce the risk of injury.

Lifting up to 25 kilograms is routinely required.

Personal Characteristics

Plastics processing technicians need the following characteristics:

- manual dexterity
- the ability to stand for long periods of time
- the ability to perform repetitive tasks and pay attention to details
- mechanical ability
- the problem solving skills required to correct processing and equipment related problems
- the communication and interpersonal skills required to work effectively in a team environment.

They should enjoy performing tasks requiring precision, taking a methodical approach to their work and assisting engineers.

Educational Requirements

Plastics processing technicians need:

- basic math skills
- a working knowledge of the processing characteristics of common plastics materials

- the knowledge and skills required to set up and maintain automated processing equipment
- related safety training.

In Alberta, most plastics processing technicians are **trained on the job**. Employers may require applicants to have one or more of the following qualifications:

- experience working in manufacturing or production environments
- experience working with small tools, forklifts or pallet jacks
- related post-secondary education or training (eg. a minimum of one semester in materials engineering or manufacturing technology, or completion of the first and second periods of millwright or related apprenticeship training)
- a Fourth Class Power Engineering Certificate (for more information, see the Power Engineer occupational profile).

Employment and Advancement

(section revised JANUARY 2006)

Plastics processing technicians are employed by large and small plastics manufacturing firms.

Experienced plastics processing technicians may advance to supervisory positions or move into related positions in quality control and testing, equipment maintenance or costing and production estimating. Further education may be required to advance to management positions.

Plastics processing technicians are part of the larger National Occupational Classification 2233: Industrial Engineering and Manufacturing Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Other Manufacturing**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,450 Albertans are employed in the Industrial Engineering and Manufacturing Technologists and Technicians occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since plastics processing technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for plastics processing technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Industrial Engineering and Manufacturing Technicians occupational group working part-time or full-time earned from **$20,800 to $76,900 a year.** Salaries for plastics processing technicians are generally toward the lower end of this range.

OCC info Alberta Occupational Profiles

Alberta Human Resources and Employment

Plumber

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Plumbers plan, install and service plumbing systems, fixtures, piping equipment and controls.

NOC Number(s): 7251
Minimum Education: Apprenticeship Trade - Grade 12
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O i m**

Duties

On construction sites, plumbers start by "roughing in" after the frame and roof of a new building are in place. In general, they:

- study the building plans and specifications to determine the layout for plumbing and related materials
- locate and mark positions for connections and fixtures
- cut holes through walls and floors to accommodate pipes
- select the type and size of pipe required and measure, cut, thread, bend, clamp, solvent cement or solder pipe
- assemble and install valves and fittings
- join pipe sections and secure them in position
- test pipe systems for leaks
- install underground storm sanitary and water piping systems.

Plumbers return to the construction site after the plasterers or drywallers, tilesetters and floorcovering installers have completed their work and do the "finishing" work such as installing sinks, tubs and toilets.

Plumbers may specialize in the types of work they do:

- installing water conditioners
- installing plumbing in houses under construction
- installing plumbing in commercial, institutional, industrial or public buildings
- renovating, maintaining and repairing existing plumbing.

In smaller communities, plumbers generally do a wider variety of plumbing and plumbing-related jobs such as installing private sewage disposal systems and potable water distribution systems.

Working Conditions

Working conditions vary from one job to another. Plumbers may be required to stand all day or work in cramped, awkward positions. There is some risk of injury when working with rough metals, power tools and pipe-joining equipment. When roughing-in, the plumbers have little protection from the weather.

Plumbers may required to lift items weighing over 25 kilograms.

Personal Characteristics

Plumbers need the following characteristics:

- physical strength and stamina
- the agility to work in cramped positions
- mechanical ability
- the ability to work independently or with others.

They should enjoy working with little supervision and working in a variety of conditions.

Educational Requirements

To work in Alberta, plumbers must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta high school diploma with Math 10 or 13, Pure Math 10 or Applied Math 10 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

First or second class gasfitters who are certified in Alberta, and want to be certified as plumbers as well, must apprentice in the plumber trade.

Applicants who are not already certified in Alberta as a Gasfitter (1st Class or 2nd Class) must complete an apprenticeship program that includes both the plumber and gasfitter 2nd class trades.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Plumber apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- Medicine Hat College
- the Northern Alberta Institute of Technology (NAIT) in Edmonton and Fairview
- Red Deer College
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Plumbers are employed by construction contractors, plumbing repair shops and large organizations. Some are self-employed.

Experienced plumbers may advance to supervisory positions such as foreman or estimator, or start their own contracting businesses. Alberta certified journeyman plumbers who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, most people employed as plumbers work in the **Construction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the Construction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 5,200 Albertans are employed in the Plumbers occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 110 to 170 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice plumbers earn at least 50 per cent of the journeyman wage rate in their place of employment in the first year, 60 per cent in the second, 70 per cent in the third and 80 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$18 to $24 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Plumbers occupational group working part-time or full-time earned from **$19,000 to $120,000 a year.** The average salary was **$50,800 a year.**

Podiatrist

Produced FEBRUARY 2005

Podiatrists diagnose and treat diseases, deformities and injuries of the human foot and help patients prevent foot-related disorders.

NOC Number(s): 3123.1
Minimum Education: 8 + years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I M O**

Duties

Podiatrists are health care professionals who are primarily concerned with patients' feet, just as dentists are primarily concerned with patients' mouths and optometrists are primarily concerned with patients' eyes. Podiatrists deal with all types of foot disorders including:

- ingrown toenails
- tumours and cysts
- bunions and bone growths
- warts, corns and calluses
- deformities from birth or neglect
- sprains and fractures
- abnormalities of gait and posture
- skin disorders.

In general, podiatrists:

- assess and diagnose foot problems by observing symptoms, reading x-rays and interpreting medical test results (e.g. from blood tests, urinalysis, micro-organism cultures)
- treat foot problems by performing surgery on soft tissue and bone, prescribing orthotic devices, providing palliative care or, in some cases, prescribing medication.

Working Conditions

Most podiatrists are self-employed and are therefore free to set their own hours. They generally work regular office hours but, for the convenience of their patients, may work some evenings and weekends.

Podiatrists spend part of their working hours standing, conducting examinations and treating patients, and the rest of their working hours sitting at a desk, consulting with patients and doing the required paperwork.

Personal Characteristics

Podiatrists need the following characteristics:

- an interest in assisting people
- an interest in science
- the academic ability and ambition required to complete advanced studies successfully
- manual dexterity
- average physical strength
- good eyesight.

They should enjoy working with people, following a routine, and using instruments and equipment to perform tasks requiring precision.

Educational Requirements

One post-secondary institution in Canada and seven in the United States provide training through a four year program leading to a Doctor of Podiatric Medicine (DPM) degree:

- **Universite de Quebec a Trois-Rivieres** in Quebec (instruction in French)
- **Barry University School of Podiatric Medicine** in Miami Shores, Florida
- **Samuel Merritt College** in San Francisco
- **New York College of Podiatric Medicine** in New York
- **Ohio College of Podiatric Medicine** in Cleveland
- **Temple University School of Podiatric Medicine** in Philadelphia
- **Rosalind Franklin University of Medicine and Science** in Chicago
- **University of Osteopathic Medicine and Health Sciences - The College of Podiatric Medicine and Surgery** in Des Moines, Iowa.

The **minimum** admission requirement for these programs is three pre-professional years at a recognized college or university with course work in biology, chemistry, physics, mathematics and English.

In most cases, applicants must have a Bachelor of Science (B.Sc.) or a Bachelor of Arts (BA) degree and successfully complete the Medical College Admissions Test (MCAT) to be considered for admission.

The first two years in podiatry college consist of classroom instruction and laboratory work in sciences such as anatomy, microbiology, biochemistry, physiology, pharmacology and pathology. In the final two years, the emphasis is on clinical practice and on practical experience in all departments including surgery.

Graduates of four year podiatry programs generally complete two to three years of residency after graduation. Therefore, it usually takes students **a total of eight to eleven years** to complete their studies.

Other Requirements

Under Alberta's Podiatry Act, only registered members of the Alberta Podiatry Association (APA) may call themselves Podiatrists. Registered members provide podiatric services as defined in the Podiatry Act and the Drugs, Chemicals and Compounds Regulation.

Employment and Advancement

(section revised JANUARY 2006)

Most podiatrists work in general practice, either alone or in a group situation.

Advancement generally takes the form of becoming a recognized expert in specific types of foot problems or treatments.

Podiatrists are part of the larger National Occupational Classification 3123: Other Professional Occupations in Health Diagnosing and Treating. In Alberta, people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 250 Albertans are employed in the Other Professional Occupations in Health Diagnosing and Treating occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since podiatrists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for podiatrists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

There are relatively few podiatrists in Canada and most are located in large urban centres. Employment growth is best in smaller communities that currently have no specialized foot care services.

Salary

Podiatrists' earnings vary depending on:

- personal ability and reputation
- efficiency of practice management
- years of experience
- size and location of the practice
- government limits on expenditures for podiatric services.

© Government of Alberta, Human Resources and Employment

Police Officer

Produced APRIL 2003

Police officers help to protect citizens and their property, maintain public peace, prevent and detect crime, apprehend those who break the law, process court requirements, handle traffic problems, enforce regulations, and act as agents of social change within the community to promote safer neighbourhoods.

NOC Number(s): 6261
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M D S**

Duties

In their daily work, police officers perform many duties ranging from enforcing the law and apprehending criminals, to controlling traffic and arbitrating domestic disputes. Police work does not always involve a physical act of protection or the apprehension of a law breaker. It also involves activities such as:

- crime prevention activities
- helping victims of crime
- working with community groups to identify and solve policing problems of mutual concern
- forensic investigations
- administrative work such as writing up shift reports
- court appearances.

Some officers do undercover work.

Working Conditions

Police officers may work a regular five-day, 40 hour week or a compressed work week with 10 or 12 hour shifts. Weekend, holiday and night shifts are usually required because police protection must be provided around the clock.

Officers work both indoors and outdoors in all kinds of weather and may be required to stand or walk for hours at a time, or ride in a vehicle for a complete shift. At times, they have to use force and may be required to lift in excess of 25 kilograms in emergency situations.

Police officers often work in stressful, emotional situations and sometimes work in dangerous situations (e.g. dealing with domestic and public disputes, arresting lawbreakers, pursuing speeding motorists).

Personal Characteristics

Personal characteristics such as honesty, integrity, maturity, good judgement, patience, intelligence, good observation skills and basic good humour are essential in this occupation. Police officers also need to be:

- physically fit and able to meet visual acuity standards
- able to work with all kinds of people in a variety of situations
- able to use their own initiative and work with a minimum of supervision
- able to work as part of a team.

They should enjoy having clear rules and guidelines for analyzing information and investigations, taking charge of situations and dealing with people.

Educational Requirements

(section revised JUNE 2005)

Specific qualifications required by police departments **vary**. They **may** require:

- a high school diploma or related post-secondary diploma (or have no stated minimum education requirement)
- character references or psychological testing
- Canadian citizenship or legal permanent resident status
- a valid driver's licence and good driving record
- no criminal convictions or criminal charges pending before the courts
- evidence of writing, keyboarding and computer skills
- valid first aid and cardioplumonary resuscitation (CPR) certificates.

Candidates must be physically fit, meet minimum vision requirements and be in good health. The minimum application age varies from 18 to 21 years but the average age of new recruits is generally about 26 or 27 years of age. Related post-secondary education, the ability to speak a second language and knowledge of Alberta's multi-cultural and volunteer communities are definite assets.

In Alberta, education programs related to law enforcement are offered by the following post-secondary institutions:

- **Athabasca University** offers a four year Bachelor of Professional Arts degree program in Criminal Justice. This program is available to students who have a two year diploma in criminal justice-related areas from an accredited college or technical institute program.
- **CDI College of Business, Technology and Health Care** in Calgary and Edmonton offers a 42-week Policing and Protection Services program.
- **Columbia College**, a private vocational school in Calgary, offers Criminal Justice Certificate and Diploma programs. These programs may be taken as 25 week full-time programs or 50 week part-time programs. The entrance requirements for the Certificate program are a high school diploma with at least 60 per cent in English 30 and Math 30 or equivalent, a successful interview and a criminal record check.
- **Grant MacEwan College** in Edmonton offers a two year Police and Security diploma program with a specialization in Police Studies. The entrance requirement is a high school diploma or equivalent with at least 65 per cent in English 30 (or at least 75 per cent in English 33 or a skills assessment). A criminal record check and fitness test are required. Grant MacEwan College also offers a nine month Aboriginal Police Studies program.
- **Lethbridge Community College** offers a two year Criminal Justice Diploma. The entrance requirement is a high school diploma or equivalent. Applicants are required to take a computerized placement test, complete a questionnaire and attend an interview with a faculty member. A medical examination and eyesight/colour vision testing are recommended. Lethbridge Community College also offers a Criminal Justice certificate designed for aboriginal people.
- **Medicine Hat College** offers a two year Police and Security diploma program with a Police major. The entrance requirements are a high school diploma or with at least 60 per cent in English 30 or equivalent, and completion of a Standard First Aid and CPR certificate. An interview and program orientation are required, and a physical fitness test may be required. This program is offered in partnership with Grant MacEwan College.
- **Mount Royal College** in Calgary offers a four year applied degree program in Justice Studies. The entrance requirement is a high school diploma with English 30, Pure or Applied Math 30 and Social Studies 30 or equivalent.
- **Northern Lakes College** in Grouard offers a 10 month Aboriginal and Community Policing certificate program. Applicants must be at least 19 years old and have successfully completed English 23 and Math 13 or Applied Math 10 or equivalent. A valid driver's licence, criminal record check, fitness assessment, medical exam and personal interview are also required. Graduates of this program may apply for credit toward police and security programs at Lethbridge Community College, Grant MacEwan College or Athabasca University.
- **NorQuest College** in Edmonton offers a 40-week Aboriginal Policing and Security certificate program. Applicants must be at least 19 years old and have successfully completed a Grade 10 English and Math or equivalent. A valid driver's licence, fitness assessment and medical exam are also required.
- The **University of Alberta** in Edmonton offers a four year Bachelor of Arts (BA) degree program in criminology. The entrance requirement is completion of one year of an undergraduate degree program (usually an Arts program) with a minimum grade point average of 6.0/9. This is a quota program so higher than minimum marks may be required for admission. Two letters of reference and personal suitability for employment in the criminal justice system are also required.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

In Alberta, police officers are employed by:

- the Royal Canadian Mounted Police
- municipal police services
- First Nation police services
- rail services
- special constable services.

Following induction, recruits undergo a period of basic training that includes classroom lectures, physical fitness activities and in-service street policing. Training is followed by assignment to a patrol or traffic division. Advanced and specialized training is provided later for experienced officers.

Officers have the opportunity to advance in the service, although promotion generally requires several years of employment.

Police officers are part of the larger National Occupational Classification 6261: Police Officers (Except Commissioned). In Alberta, most people employed in this classification work in the **Public Administration** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Public Administration industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 5,350 Albertans are employed in the Police Officers (Except Commissioned) occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 80 to 140 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Police Officers (Except Commissioned) occupational group working part-time or full-time earned an average salary of **$64,900 a year**.

© Government of Alberta, Human Resources and Employment

Political Scientist

Produced JANUARY 2006

Political scientists study the institutions, laws and methods used in political process and government, influences that shape government policy, practices and organization (politics) and fundamental questions about related concepts (for example, power, freedom, security, justice, democracy).

NOC Number(s): 4169.6
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I D M**

Duties

In general, political scientists:

- analyze the policies, public issues, legislation or the operations and activities of governments, business corporations and regional, non-governmental and international organizations
- research institutions, political processes and public policy and law relating to domestic and international politics (for example, study public opinion, political parties, elections, interest groups, social movements, non-governmental organizations, inter-govermental relations, international law and organization)
- collect, analyze and interpret data (for example, election results and surveys, public documentation)
- publish the results of their research in academic publications, written reports or through presentations at public seminars
- participate, organize, manage or run as candidates in election campaigns
- advise elected representatives or political parties in municipal, provincial or federal politics
- advise governmental and non-governmental organizations
- serve on administrative boards and commissions
- provide media commentary on public policy and political issues.

Political scientists usually specialize in particular areas such as:

- political theory, economy or behaviour
- comparative government
- municipal, provincial, national or international government
- public policy and administration
- constitutional law
- international relations and strategic studies.

Working Conditions

Political scientists working in universities or colleges divide their time between teaching, administrative duties, community outreach and research. Travel to meetings and conferences is often required. Tight schedules, deadlines and heavy workloads can be stressful.

Political scientists employed by political parties may work long, irregular hours, especially during election campaigns. Those employed in the diplomatic service or by international or non-governmental organizations also may attend numerous social functions.

Personal Characteristics

Political scientists need the following characteristics:

- a strong interest in political affairs and research
- strong written and oral communication skills
- strong interpersonal skills

- good time management skills
- critical thinking skills and the ability to understand the world from a variety of political, cultural and community perspectives
- initiative and the ability to work effectively in groups and alone.

They should enjoy gathering, synthesizing and evaluating information, taking responsibility for projects, and taking a methodical approach to gathering information.

Educational Requirements

The preferred credential for political scientists is a master's or doctoral degree in political science. Doctoral (PhD) degrees are required for college and university teaching positions.

The standard admission requirement for a master's degree program is a four year bachelor's degree in a related discipline with an acceptable grade point average (GPA) in the last two years of study. In Alberta, the following institutions offer **four year** degree programs related to political science.

- **Athabasca University** offers a four year Bachelor of Arts (BA) degree program in Political Economy by distance education. Applicants must be at least 16 years of age.
- The **King's University College** in Edmonton offers a four year BA degree program in Politics, History and Economics. The entrance requirement is an average of at least 60 per cent in five appropriate Grade 12 subjects including English Language Arts 30-1, or equivalent.
- **Mount Royal College** in Calgary offers a four year Applied Bachelor Degree program in Policy Studies. The entrance requirement is an average of at least 60 per cent in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30), Social Studies 30 and two other appropriate Grade 12 subjects.
- The **University of Alberta** in Edmonton offers BA and BA (Honors) degree programs in Political Science. The entrance requirement is a competitive average in English Language Arts 30-1 (or English 30), a 30 level language other than English or Pure Math 30 (or Math 30), one 30 level science and two other approved 30 level subjects. The University of Alberta also offers master's and doctoral degree programs in political science.
- The **University of Calgary** offers four year BA and five year BA (Co-op) programs in Political Science. The entrance requirement is a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 or Math 30 or 31, and three of the following: Biology 30, Chemistry 30, Physics 30, Social Studies 30, Science 30, a 30 level language other than English, one five credit Grade 12 subject. The University of Calgary also offers master's and doctoral programs in political science.
- The **University of Lethbridge** offers four year BA, Bachelor of Arts and Science, and Bachelor of Management degree programs and five year combined degree programs in Political Science. The entrance requirement is an average of at least 65 per cent in English Language Arts 30-1 (or English 30), three other appropriate 30 level subjects and a fifth Grade 12 subject. Pure or Applied Math 30 (or Math 30 or 33, or equivalent) is required for admission to the Management program. The University of Lethbridge also offers a master's degree program in political science.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Graduates of bachelor's degree programs in political science may work in:

- partisan (connected to a political party) and non-partisan positions in parliament, legislative assemblies, municipalities, government departments, crown corporations and regulatory agencies (for example, caucus researchers, executive or special assistants to ministers, research officers)
- research bureaus and organizations that conduct surveys and opinion polls
- consular offices
- consulting firms that advise citizens' groups, large banks and corporations
- advocacy-research organizations that analyze government policies (for example, non-governmental organizations operating in the Third World)
- the news media (as political reporters)
- businesses or corporations (as government relations specialists).

Political scientists who have master's or doctoral degrees may work in:

- senior administrative positions in municipal, provincial or federal government departments
- colleges or universities, teaching and conducting research
- international service organizations such as the United Nations or the World Bank
- private consulting firms or thinktanks, conducting research.

Self-employed consultants work on short-term contracts and may experience periods of unemployment. In electoral politics, job security is dependent on election results.

Political scientists are part of the much larger National Occupational Classification 4169: Other Professional Occupations in Social Science. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Educational Services**
- **Health Care and Social Assistance**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 350 Albertans are employed in the Other Professional Occupations in Social Science occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since political scientists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for political scientists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for political scientists vary considerably.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Professional Occupations in Social Science occupational group working part-time or full-time earned from **$31,800 to $79,600 a year.** The average salary was **$54,900 a year.**

Pollution Control Technologist

Produced SEPTEMBER 2005

Pollution control technologists conduct inspections, tests and field investigations to determine the extent of existing air, water or soil contamination and find ways to control and prevent contamination.

NOC Number(s): 2211.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I M**

Duties

Pollution control technologists often work as part of a team of environmental specialists that may be primarily concerned with:

- air quality
- water quality
- soil quality
- noise control
- hazardous waste control
- a combination of the above.

Duties and responsibilities vary depending on their area of specialization but, in general, pollution control technologists:

- conduct inspections of industrial facilities, municipal facilities and waste management facilities to determine compliance with standard operating procedures or environmental legislation
- collect and analyze environmental samples such as soil samples, gas samples from industrial emissions or water samples from streams
- set up, operate and maintain environmental monitoring equipment and test instrumentation in fixed or mobile stations
- conduct environmental audits in solid waste, air and water management
- prepare environmental reports and maintain records
- make recommendations regarding the equipment and procedures to be used in removing or reducing the level of pollutants.

For a description of the duties performed by technologists who work primarily in laboratories analyzing samples, see the Chemical Technologist profile.

Working Conditions

Working conditions range from pleasant office environments to unpleasant outdoor environments (for example, working in bad weather conditions or around odorous substances, pollutants or hazardous wastes). Some jobs involve a lot of physical activity including lifting equipment weighing up to 25 kilograms, travel to field sites or being away from home for several days or weeks at a time.

Personal Characteristics

Pollution control technologists need the following characteristics:

- the patience and perseverance required to gather and test field samples
- the ability to ensure legal compliance tactfully but persistently
- good observation and analytical skills
- the ability to be innovative and creative
- the ability to work independently as well as part of a team
- good verbal and written communication skills.

They should enjoy working with tools and instruments at tasks requiring precision, analyzing data to find solutions to problems, taking a methodical approach to their work and supervising others.

Educational Requirements

Most pollution control technologists have **related post-secondary education** such as a diploma in biological or environmental sciences, or a degree in biology, chemistry, biochemistry or environmental science.

Post-secondary institutions throughout Alberta offer programs in biology, chemistry, biochemistry, environmental science and related disciplines. The following institutions offer two year diploma programs in environmental science or technology:

- **Keyano College** in Fort McMurray offers a two year Environmental Technology diploma program. The entrance requirement is a high school diploma with Grade 11 math, chemistry and biology.
- **Lakeland College** in Vermilion offers two year diploma programs in Agro-Environmental Technology, Conservation and Vegetation Management Technology, Environmental Conservation and Reclamation, Environmental Protection Technology, and Natural Resources Technology. The entrance requirement for all programs is a high school diploma with English Language Arts 30-1 or English 30 (or 65 per cent in English Language Arts 30-2 or English 33), Math 30 or Pure Math 30 (or 65 per cent in Applied Math 30 or Math 33), Biology 30 and Chemistry 30.
- **Lethbridge Community College** offers a two year Environmental Sciences diploma program with specializations in renewable resource management, and environmental assessment and restoration. The entrance requirement is a high school diploma with English Language Arts 30-1, Biology 20, Chemistry 20 and Applied Math 20, or equivalent. Applicants who do not have at least 70 per cent in ELA 30-1 and Applied Math 20 will be required to complete a computerized placement test. **Medicine Hat College** also offers the first year of this program.
- **Mount Royal College** in Calgary offers a one year certificate program in Environmental Technology. This program is designed for students who have experience in environmental management or related fields.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Biological Sciences Technology diploma program with specializations in environmental sciences and renewable resources. The entrance requirement is a high school diploma with English Language Arts 30-1 or 30-2, Chemistry 30, Biology 30 and Applied or Pure Math 30 (or equivalent).
- **Olds College** offers a two year Land and Water Resources diploma program. The entrance requirement is a high school diploma with Pure or Applied Math 20 (or equivalent) and Chemistry 20, Biology 20 or Science 30.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers two year Environmental Technology diploma program. The entrance requirement is a high school diploma with at least 60 per cent in Pure Math 30 and Chemistry 30, and at least 50 per cent in English Language Arts 30-2 (or equivalent).

The following post-secondary institutions offer degree programs in environmental science:

- **Concordia University College of Alberta** in Edmonton offers three and four year B.Sc. degree programs in environmental science. The entrance requirement is an average of at least 60 per cent in English Language Arts 30-1, Pure Math 30, Chemistry 30 and Biology 30 (or equivalent) and one other appropriate 30-level subject.
- **The King's University College** in Edmonton offers three and four year Bachelor of Arts and B.Sc. degree programs in environmental studies. The entrance requirement is an average of at least 60 per cent in English Language Arts 30-1, Pure Math 30, and one of Biology 30 or Chemistry 30 (both are recommended), and two other approved 30-level courses.
- **Lakeland College** in Vermilion a Bachelor of Applied Environmental Management degree program with a reclamation/remediation stream and a monitoring/environmental protection stream. The entrance requirement is successful completion of a related two year diploma program from a recognized post-secondary institution.
- The **University of Alberta** offers four year degree programs in Environmental and Conservation Sciences (Edmonton), Environmental and Conservation Sciences/Native Studies Combined (Edmonton) and Environmental Science (Camrose). The entrance requirement for these programs is a competitive average of 65 to 80 per cent in English Language Arts 30-1, Pure Math 30, Chemistry 30, Biology 30 and one other Grade 12 subject.
- The **University of Calgary** offers a four year B.Sc. degree program in Environmental Science. The entrance requirement is a high school diploma with a competitive average in English Language Arts 30-1, Pure Math 30 (or equivalent), Chemistry 30, two of the following: Biology 30, Math 31, Physics 30, and one other 30-level subject selected from an approved list. Biology 30 is required for the biological sciences concentration. Students must complete a year of appropriate university studies before being admitted to this program.

- The **University of Lethbridge** offers a four year B.Sc. degree program in Environmental Science. The entrance requirement is an average of at least 65 per cent in English Language Arts 30-1, Biology 30, Chemistry 30, Pure Math 30 (or equivalent) and a fifth Grade 12 subject (Math 31 recommended).

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Certification is voluntary. The Alberta Society of Engineering Technologists (ASET) offers certification for graduates of recognized education programs who have two years of successful experience in industry.

Employment and Advancement

(section revised JANUARY 2006)

Pollution control technologists may work for the following types of organizations:

- government research laboratories or inspection and maintenance departments
- environmental consultants
- electric utility generation facilities
- water and wastewater treatment plants
- private research organizations
- environmental monitoring agencies
- waste management companies
- oil and gas companies
- petrochemical companies
- pulp and paper companies.

Pollution control technologists sometimes work as inspectors, instrument specialists, technical representatives for equipment manufacturers, or in other fields directly related to environmental investigation and enforcement.

In large organizations, experienced technologists may advance to supervisory and management positions.

Pollution control technologists are part of the much larger National Occupational Classification 2211: Chemical Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Petrochemicals, Rubber, Plastics and Chemicals Manufacturing**
- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Public Administration**
- **Food and Beverage Products Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,150 Albertans are employed in the Chemical Technologists and Technicians occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since pollution control technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for pollution control technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Chemical Technologists and Technicians occupational group working part-time or full-time earned from **$23,500 to $89,300 a year.** The average salary was **$53,600 a year.**

Postal/Wicket Clerk

Produced NOVEMBER 2005

Postal/wicket clerks provide postal services for customers and record transactions at sales counters and postal wickets.

NOC Number(s): 1461.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M i s**

Duties

For simplicity, postal/wicket clerks are called postal clerks for the remainder of this profile. In general, they:

- greet customers and answer questions
- rent postal boxes and sell postage stamps, money orders and special envelopes
- use a computerized system to weigh mail, determine the class of mail and calculate postage
- fill out forms for special services such as registered, Priority Post or cash-on-delivery (COD) mail
- set postage meters
- collect payments
- cash in money orders
- put undelivered parcels away, retrieve them when customers come to claim them and complete any required documentation.

In small Canada Post offices, postal clerks also may move heavy mail sacks. In retail postal outlets, they may have additional responsibilities such as maintainting inventory or helping to keep the store clean.

Working Conditions

Postal clerks work in post offices and postal outlets located in retail establishments. They may work full-time or part-time shifts that include evenings (and weekends in retail outlets). Some are required to wear uniforms supplied by employers. In postal outlets with smaller mail volumes, postal clerks may work alone.

Postal clerks are on their feet for most of their shifts and may be required to routinely lift items weighing up to 22.7 kilograms.

Personal Characteristics

Postal clerks need the following characteristics:

- the ability to handle and account for stamps, cash and other supplies
- the ability to communicate well with colleagues, supervisors and a wide variety of postal customers
- manual dexterity
- a good memory.

They should enjoy having clear guidelines and organized methods for their work, handling mail and talking to people.

Educational Requirements

Postal clerks are trained on the job. When seeking employment, a high school diploma and experience serving the public are definite assets. Applicants for Canada Post positions must:

- have recent physical work experience
- have good references
- pass a series of practical and oral tests.

Employment and Advancement

(section revised JANUARY 2006)

Postal clerks are employed throughout Alberta in postal outlets that are operated by Canada Post or by contractors to Canada Post.

Competition for Canada Post positions is keen and there are rigorous screening procedures for job applicants. Nearly one in three jobs is part-time. Prospective Canada Post employees in major urban centres are hired as temporary employees who are on call. At first, they may work only a few days a month. More than three years of seniority are usually required to become permanent employees and several more years are required to move into wicket positions.

Postal clerks employed by Canada Post are members of the Canadian Union of Postal Workers (CUPW). Postal clerks employed by contractors who operate retail store postal outlets may not be represented by unions.

Many postal clerks stay in the occupation until they retire. Without further education, advancement opportunities for postal clerks are limited.

Postal clerks are part of the larger National Occupational Classification 1461: Mail, Postal and Related Clerks. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Transportation and Warehousing**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 4,250 Albertans are employed in the Mail, Postal and Related Clerks occupational group which is expected to grow up to 1.0 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since postal clerks form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for postal clerks.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Wages and benefit packages vary considerably from one employer to another.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Mail, Postal and Related Clerks occupational group working part-time or full-time earned from **$12,500 to $28,500 a year.** The average salary was **$17,100 a year.**

Hourly wages for postal clerks employed by Canada Post range from **$20.55 to $21.28 an hour (2005 figures)**.

© Government of Alberta, Human Resources and Employment

Power Engineer

Produced JULY 2005

Power engineers supervise, operate and maintain machinery and boilers that provide power, heat, refrigeration and other utility services to heavy industry and large building complexes.

NOC Number(s): 7351
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O i m**

Duties

Power engineers are responsible for the safe and efficient operation and maintenance of industrial equipment such as boilers, steam and gas turbines, generators, gas and diesel internal combustion engines, pumps, condensers, compressors, pressure vessels and related controls. In large industrial or building complexes, they also may be responsible for heating, air-conditioning, ventilation, refrigeration, fire systems and building control systems.

Responsibilities vary from one position to another but, in general, power engineers:

- ensure that safety codes and other applicable regulations are followed
- use automatic or manual controls to start, operate and shutdown plant systems
- monitor alarms, gauges and other instruments associated with plant operations
- trouble shoot and take corrective action to prevent equipment or system failures
- isolate equipment mechanically and electrically for inspection and repair
- ensure that equipment and processes operate at maximum efficiency
- assist in the development of operation, maintenance and safety procedures
- maintain a daily log of operation, maintenance and safety activities
- investigate and report on safety-related accidents or incidents
- write reports about plant operation
- work with outside agencies, consultants and contractors.

Industrial plants and building operations often are automated to enhance production efficiency and improve safety. In more modern plants, senior power engineers may work in control room environments, analyzing problems and taking action to ensure continuous and reliable operation of equipment and systems. At times, they must switch from automatic controls to manual controls to correct problems and ensure the safety of staff and equipment.

Working Conditions

Working conditions vary considerably in this occupation. Power engineers may be exposed to high noise levels, high temperatures, high humidity, all types of outdoor weather conditions, dust, grease, hazardous chemicals or unpleasant odours. For example, those working in a coal-fired power generating station are exposed to coal dust and fly ash. In large plants, power engineers may be required to enter confined spaces or inspect equipment located at extreme heights. Lifting items that weigh up to 25 kilograms may be an occasional or regular part of their work. Safety precautions and procedures must be observed to reduce the risk of injury.

Power engineers often work shifts, weekends, holidays and emergency overtime to accommodate continuous production.

Personal Characteristics

Power engineers need the following characteristics:

- mechanical and electrical aptitude
- good vision, hearing, manual dexterity and eye-hand co-ordination
- good communication skills in person and in writing
- good organizational and decision-making skills

- the ability to work well with others in a team environment.

Power engineers should enjoy controlling and operating manual and automated systems, analyzing information and solving problems, and having clear rules and organized methods for their work.

Educational Requirements

In Alberta, power engineers are **certified through the Alberta Boilers Safety Association**. Certification examinations are standardized and accepted in all provinces except Quebec.

There are five levels of certification, advancing from Fifth Class certificate to First Class certificate. Each level of certification has different training and employment experience requirements. Completion of an approved course is required to challenge Fourth and Fifth Class Certificate of Competency examinations.

To write the examination for the Third Class certificate, candidates must have:

- the required operating experience with a Fourth Class certificate
- Science 10 or Physics 10, Applied Math 10 or Pure Math 10 (or Math 10 or 13) and English 10 or 13 (or equivalent education) or pass Part A of a recognized Third Class course in power engineering.

To write the examination for the Second Class certificate, candidates must have:

- the required operating experience with a Third Class certificate
- Science 20 or Physics 20, Applied Math 20 or Pure Math 20 (or Math 20 or 23) and English 20 or 23 (or equivalent education) or pass Part A of a recognized Second Class course in power engineering.

To write the examination for the First Class certificate, candidates must have:

- the required operating experience with a Second Class certificate
- Science 30 or Physics 30, Applied Math 20 or Pure Math 20 (or equivalent) and English 20 or 23 (or equivalent), or pass Part A of a First Class course in power engineering.

Power engineering programs and continuing education courses are offered by the following post-secondary institutions in Alberta:

- **Grande Prairie Regional College**
- **Keyano College** in Fort McMurray
- **Lakeland College** in Lloydminster,
- **Lethbridge Community College**
- **Medicine Hat College**
- **Northern Alberta Institute of Technology (NAIT)** in Edmonton and Fairview
- **Northern Lakes College** in Grouard
- **Portage College** in Lac La Biche
- **Red Deer College**
- **Southern Alberta Institute of Technology (SAIT)** in Calgary.

Entrance requirements for entry level power engineering programs vary but generally include Grade 10 or 11 English, math and physics courses. Some programs require a high school diploma or equivalent.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Power engineers may be employed in any industry in which boilers are used. For example, they may be employed in:

- gas plants
- power generating plants
- heavy oil plants
- petrochemical plants
- pulp mills
- plastic plants
- breweries
- food production plants
- refineries

- hospitals
- hotels
- schools and other institutions
- office and apartment complexes.

Competition for entry level positions is keen, especially at the third, fourth and fifth class Power Engineer levels. Advancement to more responsible positions usually requires higher levels of certification. However, higher level certificates do not guarantee promotion.

People who have power engineering certification may be employed in a number of National Occupational Classifications (NOC groups). In Alberta, over 75 per cent of people employed in the classification 7351: Stationary Engineers and Auxiliary Equipment Operators classification work in the following industries:

- **Utilities**
- **Health Care and Social Assistance**
- **Educational Services**
- **Oil and Gas Extraction**
- **Food and Beverage Products Manufacturing**
- **Mineral Products Manufacturing**
- **Public Administration**
- **Management, Administrative and Other Support Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,950 Albertans are employed in the Stationary Engineers and Auxiliary Equipment Operators occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: This forecast does not include job openings created in other NOC classifications that require power engineering certification.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Earnings for power engineers vary according to the level of certificate held, the responsibilities of the position, and the location and size of the employing organization.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Stationary Engineers and Auxilliary Equipment Operators occupational group working part-time or full-time earned from **$21,600 to $78,400 a year.** The average salary was **$57,300 a year.**

Power Lineman

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Power linemen construct, maintain and repair overhead and underground electrical power transmission and distribution systems.

NOC Number(s): 7244
Minimum Education: Apprenticeship Trade
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O i m

Duties

Duties vary from one position to another but, in general, power linemen:

- erect and maintain steel, wood or concrete poles, towers and guy wires
- install, maintain and repair overhead and underground power lines and cables, insulators, conductors, lightning arrestors, switches, transformers, street lighting and other associated equipment
- splice, solder and insulate conductors and related wiring to connect power distribution and transmission networks.

When there is a power disturbance, failure or storm damage, power linemen locate the source of the problem and replace or repair defective power lines and accessories. They use wiring diagrams, voltage indicating devices and other electrical-testing instruments to identify defective automatic sectionalizing devices, circuit breakers, fuses, voltage regulators, transformers, switches, relays or wiring.

Working Conditions

Power linemen work outdoors and travel to various work sites. The work may be strenuous and require frequent heavy lifting, carrying and reaching. Getting to power lines may require climbing poles or towers, working from a bucket attached to an aerial lift boom or entering manholes and underground vaults.

Although a 40-hour work week is normal, linemen may be called upon at any hour and in any weather to respond to emergency situations. Shift work may also be required.

There is some risk of injury due to falls and electrical shocks. Special equipment and training in safe work practices and procedures help reduce the risk of injury when working with energized power lines. (Power lines may be de-energized and grounded or they may remain energized while power linemen are working.)

Power lineman may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Power linemen need the following characteristics:

- physical strength and stamina
- good physical co-ordination and manual dexterity
- mechanical ability
- good hearing and colour vision
- the ability to work in high places and extreme conditions
- the ability to work as a member of a team and adapt to changing tasks and locations
- the ability to keep up to date with changing technology.

They should enjoy working outdoors in all types of weather.

Educational Requirements

To work in Alberta, power linemen must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least Alberta Math 20 or 23, Pure Math 20 or Applied Math 20 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,525 hours of on-the-job training and seven weeks of technical training in each of first three years and a minimum of 1,800 hours of on-the-job training in the fourth. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Power lineman apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at the Northern Alberta Institute of Technology (NAIT) in Edmonton.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Power linemen are employed by utility companies and their contractors. In some companies, power linemen must be union members.

Experienced power linemen may advance to foreman or line supervisor positions. Alberta certified journeyman power linemen who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Power linemen are part of the larger National Occupational Classification 7244: Electrical Power Line and Cable Workers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Utilities**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,650 Albertans are employed in the Electrical Power Line and Cable Workers occupational group which is expected to grow 1.8 to 2.8 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since power linemen form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for power linemen.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice power linemen earn a minimum of 50 per cent of the journeyman wage rate in their shop in the first year, 60 per cent in the second, 67.5 per cent in the third and 75 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$25 to $32 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Electrical Power Line and Cable Workers occupational group working part-time or full-time earned from **$26,700 to $95,200 a year.** The average salary was **$50,900 a year.**

Power System Electrician

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Power system electricians install, maintain and repair electrical power generation, transmission and distribution systems and equipment.

NOC Number(s): 7243
Minimum Education: Apprenticeship Trade
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O i m**

Duties

In general, power system electricians work in two distinct areas: substations and metering.

Substations
Power system electricians in substation areas work with high voltage equipment such as:

- circuit-breakers
- transformers
- switches
- control circuits for protection, indication and monitoring systems.

Their daily work involves adjusting relays, working on safety devices, and general maintenance of large switch gear.

Metering
Power system electricians in metering areas work with a variety of recording devices such as:

- supervisory controls
- indicating and recording devices
- switchboards and equipment circuitry found in generating stations and powerhouses.

When client companies wish to review the way they are billed for power usage, power system electricians may install demand meters. These meters provide data that can help companies determine how to be more cost-effective in their power usage.

Working Conditions

Power system electricians work both indoors and outdoors. Although a 40-hour work week is normal, power system electricians may be on call at designated times or required to respond to emergencies whenever they occur. Shift work may also be required.

Special equipment and training in safe work practices and procedures help reduce the risk of injury when working with live electricity.

Personal Characteristics

Power system electricians need the following characteristics:

- the ability to handle heavy swith gear
- the ability to work with precision instruments to fine tune equipment
- the ability to understand the theoretical background of their work
- the ability to pay careful attention to details
- the ability to keep up to date with changing technology.

They should enjoy thinking of new ways to do things.

Educational Requirements

To work in Alberta, power system electricians must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least Alberta Math 20 or 23, Pure Math 20 or Applied Math 20 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire post-secondary graduates of technical programs, or high school graduates who have good marks in math, physics and drafting.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training in the first and second year and a minimum of 1,425 hours of on-the-job training and ten weeks of technical training in the third and fourth. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- Keyano College in Fort McMurray at the main campus and by mobile delivery at the Suncor site.
- Lakeland College in Vermilion
- Lethbridge Community College
- Medicine Hat College in Brooks
- the Northern Alberta Institute of Technology (NAIT) in Edmonton and Grande Prairie
- Red Deer College
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Lakeland College, Lethbridge Community College and NAIT also offer technical training by distance delivery.

Competency-Based Apprenticeship Training (CBAT) is also offered by Lakeland College, Lethbridge Community College, Medicine Hat College, NAIT and Red Deer College.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Power system electricians are employed by utility companies, large industrial facilitites, and their subcontractors.

Experienced power system electricians may advance to supervisory positions such as foreman or electric services superintendent. Alberta certified journeyman power system electricians who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, over 75 per cent of people employed as power system electricians work in the following industries:

- **Utilities**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 450 Albertans are employed in the Power System Electricians occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice power system electricians earn at least 50 per cent of the journeyman wage rate in their place of employment in the first year, 60 per cent in the second, 67.5 per cent in the third and 75 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$25 to $35 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Power System Electricians occupational group earned **up to $71,800 a year.** The average salary was **$67,700 a year**.

© Government of Alberta, Human Resources and Employment

Pre-Press Technician

Produced DECEMBER 2005

Pre-press technicians use computer software and computer-controlled machines and equipment to generate and combine text, graphics and other visual elements to prepare copy for printing.

NOC Number(s): 9472.5
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M I**

Duties

After authors write the text and artists or graphic designers translate ideas into images, publishing materials such as books, magazines and pamphlets involves the following three stages:

- The pre-press stage includes the assembly of design elements such as illustrations and text on a page, photography, scanning, imposition, film assembly, proof-reading and the transfer of images to printing press plates or digital printers.
- The press stage involves using digital printers or printing presses to produce single to full colour copies.
- The binding and finishing stage includes folding, cutting, collating and binding large sheets of paper in various ways and packaging for delivery.

This profile describes work done in the pre-press stage. For information about work performed in other publication stages, see the Digital Printing Machine Operator, Printing Press Operator and Binding and Finishing Machine Operators occupational profiles.

Most printers use computer systems to enter text, format it, add graphics and create a layout design, all in one operation. In general, **electronic (desktop/digital) publishing specialists:**

- discuss requirements and specifications with the producers of information to be published
- use computer software to prepare sample layouts for approval
- key in textual material according to specifications for typeface, point size, column width, line justification, depth of copy on page, headings, location of columns, page numbering, table of contents and indexing
- spell-check copy and correct errors
- use page-layout software to format and place text and pictures on the page
- combine, convert and prepare various types of digital files for printing
- produce final copies according to design specifications
- store copies of publications on paper, film or electronic storage media.

In process colour printing, visible colours in art work or photographs must be colour separated to create printing plates or cylinders. The nature of the plate or cylinder will depend on the type of printing press to be used. Lithographic or planographic processes require plates that have image and non-image areas on the same plane, separated by chemical interaction. Computer systems or CTP devices are often used to transfer digital images directly onto lithographic plates or directly to a specially equipped printing press. Newer digital presses don't use printing plates; they produce images directly from electronic files.

In addition to desktop/digital publishing systems, pre-press technicians may use scanners or more traditional processes to prepare images for printing:

- **Scanner operators** use flatbed or drum scanning equipment to capture images digitally. The original photograph or slide is scanned to create a digital image that can be manipulated using colour correction software. Scanner operators ensure that each image is colour corrected and has the correct tone reproduction curves for the printing process.
- **Film assemblers** assemble pieces of film (negatives or positives) into final pages which are assembled into imposed printing layouts. These assembled layouts or flats are used to make conventional proofs and, once approved, printing plates.

- **Platemakers** take approved flats of assembled positives and negatives, and position them onto a printing plate. They expose, process and quality approve the plate before sending it to press operators.

When necessary, pre-press technicians may modify film or computer files to produce the best possible print results. They must understand the entire production process to make appropriate decisions.

Working Conditions

Working conditions vary. In large companies, pre-press technicians may work in specialized departments such as a desktop publishing department or a scanning department. Most printing companies employ eight to ten people and have one pre-press area for all pre-press operations. These shops are usually located in industrial bays.

Shift work may be required and overtime is often required to meet print deadlines.

Personal Characteristics

Pre-press technicians need the following characteristics:

- accurate colour perception
- full body mobility and good hand/eye co-ordination
- the ability to pay careful attention to details
- the ability to work under the pressure of deadlines
- tact and discretion when dealing with customers' material
- a willingness to keep up to date with changing hardware and software technology.

They should enjoy having clear rules and guidelines for their work, operating computers and related equipment, and experimenting with document layouts.

Educational Requirements

(section revised FEBRUARY 2006)

Many pre-press technicians have learned on the job but technological advances are making this increasingly difficult. Related computer skills are essential for new entrants into this field. Employers generally prefer to hire applicants who have related training or experience.

In Alberta, many post-secondary institutions offer visual communications and graphic design programs. For a list, see the Graphic Designer occupational profile. The following institutions offer programs directly related to publishing or digital design:

- **Grant MacEwan College** in Edmonton offers a one year Design Foundations program. The entrance requirement is a high school diploma with English Language Arts 30-1 (or equivalent). Graduates may go on to take a two year Design Studies diploma program with a specialization in design and digital media.
- **Mount Royal College** in Calgary offers a 210 hour Publishing certificate program through Continuing Education. Applicants must be at least 18 years of age.
- **NorQuest College** in Edmonton offers a 20 week Press and Bindery Operator program. The entrance requirement is Grade 10 English and math. Graduates of this program may transfer credit toward the SAIT diploma program.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a one year Graphic Communications certificate program that focuses on pre-press skills in Mac and PC environments including elements of film assembly and reproduction photography. The entrance requirement is Grade 11 with English and at least 60 per cent in Math 20 or 23, but admission to this program is competitive so higher marks in Grade 12 subjects may be required. Art, drafting, photography or computer experience is an asset. Students are expected to have, or to acquire during the program, a minimum keyboarding speed of 50 words per minute.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Digital Graphics Communications diploma program. The entrance requirement is a high school diploma with English Language Arts 30-1 or 30-2 (or English 30 or 33).

Continuing education programs are often offered on an as needed basis. Before enrolling in any program, prospective students should discuss the suitability of the program with potential employers.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Pre-press technicians are employed by:

- daily and weekly newspapers
- commercial printers
- large corporations
- advertising agencies and publishers
- trade shops that specialize in pre-press work and subcontract to other printers.

Some desktop publishing specialists are self-employed and contract out their services.

Increasing use of digital cameras has decreased the need for scanner operators. However, it has increased the need for people skilled in colour correction and image manipulation.

Experienced pre-press technicians may become customer service representatives, estimators (who quote prices for customers), production controllers or production managers, or move into marketing and sales.

Pre-press technicians are part of the larger National Occupational Classification 9472: Camera, Platemaking and Other Pre-Press Occupations. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Other Manufacturing**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 250 Albertans are employed in the Camera, Platemaking and Other Pre-Press Occupations group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Camera, Platemaking and Other Pre-Press Occupations group working part-time or full-time earned from **$16,100 to $64,500 a year.** The average salary was **$37,800 a year.**

Printing Press Operator

Produced DECEMBER 2005

Printing press operators set up and operate sheet and web-fed presses that print single or multiple colours on paper.

NOC Number(s): 7381
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M O d**

Duties

Printing presses range from small one-man, sheet-fed lithographic presses to very large web offset presses that require several operators. Their duties and responsibilities vary depending on the type of press but, in general, press operators:

- review job orders to determine production time, colour sequence, quantities required and other paper and ink specifications
- load paper (which requires an understanding of the climatization of the paper and the effects of curl on the usability of the stock)
- install and adjust plates
- load and mix ink colours
- prepare ink fountains and feeder units
- adjust settings to control colour and consistency of reproduction
- set up the press and check samples for ink coverage and density, alignment and registration
- monitor quality consistency during production runs and make adjustments as necessary
- remove and clean plates after a press run
- perform press and feeder maintenance functions.

Different problems can arise during a run depending on the type of plates, paper, ink and chemicals used, and the humidity and temperature in the press room. Press operators must keep presses running to capacity and, at the same time, ensure that ink and chemicals are in proper balance and reproduction meets quality standards.

Working Conditions

Printing press operators usually work in climate controlled press rooms. Shift work is often required and working overtime to meet print deadlines is common.

Printing press operators often stand for long periods and do a considerable amount of bending and reaching. They frequently lift paper, ink rollers and other items weighing up to 10 kilograms. Working with machinery can be noisy and involves some risk of injury.

Personal Characteristics

Printing press operators need the following characteristics:

- good vision and accurate colour perception
- good hand/eye co-ordination
- average hearing
- mechanical ability
- the ability to stand for long periods
- the ability to pay careful attention to details
- flexibility and an interest in learning new technologies
- the ability to work under the pressure of deadlines
- good oral and written communication skills.

They should enjoy taking a methodical approach to their work, setting up and adjusting presses, and working in a team environment.

Educational Requirements

Printing press operators generally acquire their skills by learning on the job. Printing and publishing is an evolving industry and they must be prepared to handle change by learning new skills.

There are no standard education requirements for printing press operators. Employers generally prefer to hire high school graduates who have experience operating machines or equipment.

In Alberta, the following post-secondary institutions offer related education programs:

- **NorQuest College** in Edmonton offers a 20 week Press and Bindery Operator program. The entrance requirement is Grade 10 English and math. Graduates of this program may transfer credit toward the SAIT diploma program.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Digital Graphics Communications diploma program. The entrance requirement is a high school diploma with English Language Arts 30-1 or 30-2 (or English 30 or 33).

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Printing press operators are employed by:

- newspaper publishers
- magazine publishers
- commercial printers
- large corporations that have in-house printing facilities.

Where operating large presses requires a press crew, experienced operators may advance to lead hand, foreman, plant manager or other supervisory positions.

In Alberta, over 75 per cent of people employed as printing press operators work in the **Other Manufacturing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Other Manufacturing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,850 Albertans are employed in the Printing Press Operators occupational group which is expected to grow up to 0.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Printing Press Operators occupational group working part-time or full-time earned from **$20,400 to $72,100 a year.** The average salary was **$43,700 a year.**

Top salaries for printing press operators range up to $35 an hour (2005 estimate).

Private Investigator

Produced APRIL 2003

Private investigators gather information and conduct surveillance to secure evidence relating to a wide range of private, corporate and legal interests.

NOC Number(s): 6465.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I S**

Duties

Private investigators may:

- investigate and work to prevent loss caused by theft or fraud within corporations and businesses
- observe disability insurance claimants to see if they are working at another job while they are claiming disability, or to see if their activities are consistent with the claimed disability
- conduct searches for missing persons
- gather information for lawyers about defendants or witnesses in criminal and civil court cases
- gather material or evidence for individuals in divorce or child custody cases
- conduct pre-employment checks
- work with law enforcement agencies to investigate corporate/insurance crimes.

To gather the information and evidence they need, private investigators may:

- contact law enforcement agencies
- interview employers, friends, relatives and other sources
- take photographs and videotape events
- locate witnesses and obtain statements from them
- search through public records
- keep individuals under surveillance.

Working Conditions

No two assignments are ever the same. However, long hours and hard work are almost always involved. Much of the work is routine.

Personal Characteristics

Private investigators need the following characteristics:

- personal integrity
- physical fitness
- tact and good communication skills
- mental alertness and a good memory
- an inquiring mind
- a determination to investigate each problem in detail.

They should enjoy having work responsibilities that change frequently, taking a methodical approach to compiling information, finding innovative approaches to locating people, and working with people.

Educational Requirements

(section revised JUNE 2005)

Private investigators must be licensed by Alberta Justice or employed by a licensed agency. They must be at least 18 years of age. Some agencies require investigators to hold valid first aid and CPR certificates, have a valid driver's licence and provide their own mode of transportation.

Some related experience or education is a definite asset when seeking employment. Many agencies provide additional training programs for new employees.

In Alberta, the following post-secondary institutions offer investigation programs:

- **Bow Valley College** in Calgary offers a 39-hour Private Investigator certificate program. There are no specified admission requirements. Bow College College also offers a six course Private Investigation and Security certificate (part-time). The entrance requirement is the Introduction to Private Investigation program.
- **CDI College of Business, Technology and Health Care** in Calgary and Edmonton offers a 42-week Policing and Protection Services program.
- **Grant MacEwan College** in Edmonton offers a two year Police and Security diploma program with a specialization in Investigations and Security Management. The entrance requirement is a high school diploma or equivalent with at least 65 per cent in English 30 (or at least 75 per cent in English 33 or a skills assessment). A criminal record check and fitness test are required.
- **Mount Royal College** in Calgary offers a five course (90 hours) Investigation certificate program through Continuing Education. Applicants must be 18 years of age or older.
- **NorQuest College** in Edmonton offers a 40-week Aboriginal Policing and Security certificate program. Applicants must be at least 19 years old and have successfully completed a Grade 10 English and Math or equivalent. A valid driver's licence, fitness assessment and medical exam are also required.

For information about criminology and justice programs, see the Police Officer profile.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Private investigators are employed by investigation companies and security agencies. Some start their own agencies.

To open a private investigation agency, Alberta Justice requires that the applicant:

- obtain a $5,000 surety bond
- provide proof of liability and error and ommissions insurance
- be at least 18 years of age
- be a resident of the province
- have no criminal record
- give a sworn affidavit
- have fingerprints taken by the local police.

There is a $500 licensing fee for an agency and a $50 licensing fee for individuals.

Advancement opportunities are limited.

Private investigators are part of the larger National Occupational Classification 6465: Other Protective Service Occupations. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Public Administration**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

Over 700 Albertans are employed in the Other Protective Service Occupations group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 20 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since private investigators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for private investigators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Private investigators are usually paid a commission according to the fee paid by the client. Earnings vary enormously depending on experience.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Protective Service Occupations occupational group working part-time or full-time earned an average salary of **$43,900 a year**.

Private Trainer/Facilitator

Produced NOVEMBER 2005

Private trainers and facilitators conduct workshops, seminars, retreats, conference sessions and individual coaching sessions for young people and adults. They also may develop, design and evaluate training programs, curricula and materials.

NOC Number(s): 1121
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M S**

Duties

Private trainers/facilitators may be hired on a contract basis to improve the performance and productivity of employees in an organization, or they may offer workshops directly to employers/employees or the general public. They use a variety of instructional techniques and formats such as group discussions, role playing, simulations, team exercises, videos and lectures to:

- develop new skills and competencies
- foster an attitude of interest and acceptance
- enhance self-esteem and personal development and growth
- establish healthy working relationships
- promote improved team work.

Private trainers/facilitators usually negotiate contracts with clients that include fees and expenses. Depending on the nature of a contract, trainers or facilitators may be responsible for:

- determining client needs by analyzing existing information or through meetings, surveys, interviews with employees, focus groups or questionnaires
- negotiating and specifying desired training outcomes
- consulting with clients to determine the best way to implement new training programs
- designing training programs or using existing training packages
- designing communication plans for training programs
- developing course materials such as participant handouts and visual materials
- booking videos and co-ordinating group exercises and training instruments
- arranging the duplication of materials for participants
- evaluating training outcomes and preparing summary reports
- calculating or helping clients to calculate the return on investment (financial cost/benefit) of programs.

Private trainers/facilitators must spend a considerable amount of time reading current journals, magazine articles and books to keep up to date.

Working Conditions

Private trainers/facilitators work in settings such as hotel conference rooms, corporate boardrooms, college classrooms, retreat centres, government training rooms, community centres, hospital training facilities, computer labs and home offices. They may work regular business hours or offer evening and weekend training sessions. Preparation and design work may be done in the evening or while travelling.

Personal Characteristics

Private trainers/facilitators need the following characteristics:

- energetic, effective public speaker who can clearly present information in a way that is interesting, practical and appropriate for client learning styles

- flexible, respectful and patient in dealing with others
- willing to take risks and be creative
- well organized.

They should enjoy:

- independence and variety in their work
- helping others and facilitating personal and professional growth
- being innovative
- being recognized as experts in their fields
- managing their own businesses.

Educational Requirements

With the growing complexity of human resource training programs, a bachelor's degree or professional designation plus experience in adult education is rapidly becoming the minimum requirement for private trainers/facilitators. They must:

- understand the needs and characteristics of adult learners
- be skilled at interpersonal communications, leading group discussions and resolving group conflicts
- know how to use instructional aids and equipment (flipcharts, multimedia projectors, video players, presentation hardware and software)
- have computer skills for preparing training materials, using e-learning methods and locating clients.

Trainers also must have expertise that is in demand. For example, they may be be experts in management development, fostering quality service or creativity, managing change or other areas of personal development.

Although there are many private trainers/facilitators who do not have a university education, it can be difficult for those who do not have post-secondary education to break into the training field. Many private trainers/facilitators have a master's degree plus several years of experience in their fields as well as group facilitation experience.

A bachelor's degree in human resources, adult education or a business-related field would provide a good background for those entering this field. Universities and colleges located throughout the province offer a number of suitable degree programs. (For more information, see the Human Resources Professional and College, Technical or Vocational Instructor occupational profiles.)

In general, admission requirements for bachelor's degree programs include a high school diploma or equivalent with a competitive average of at least 60 per cent (70 per cent for some programs) in English Language Arts 30-1 (or English 30) and four other Grade 12 subjects selected from approved lists.

For information about specific programs and requirements, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Private trainers/facilitators are self-employed and therefore work in a wide variety of settings. Their contracts may vary from half-day sessions to long-term contracts six months to a year in length. Some work primarily for large organizations or post-secondary institutions, teaching a series of programs or seminars.

Private trainers/facilitators may be hired on contract to:

- teach short seminars or full-term courses for colleges, universities and technical institutes (usually offered through continuing education departments)
- conduct workshops for small businesses
- make presentations at professional association meetings, conferences, retreats or symposiums
- custom-design training programs to meet the specific needs of a client
- conduct needs analyses and follow-up evaluations of training sessions
- present short professional development sessions to staff members
- provide in-house training for government employees.

With increasing business competition, developing a productive labour force has become a major concern for most organizations. The need to train employees in areas such as organizational change, strategic planning, creative problem solving and conflict resolution has created growth in the training field.

Private trainers/facilitators are part of the larger National Occupational Classification 1121: Specialists in Human Resources. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**

- **Repair, Maintenance, Personal and Other Services**
- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Finance, Insurance and Real Estate**
- **Management, Administrative and Other Support Services**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

Over 6,350 Albertans are employed in the Specialists in Human Resources occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 90 to 160 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since private trainers and facilitators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for private trainers and facilitators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Incomes in this field vary considerably from one person to another and from one year to another. Private trainers usually charge a set fee per day or per contract (contracts may include content development as well as teaching). Often, preparation time is included in negotiated fees because it is not paid directly.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Specialists in Human Resources occupational group working part-time or full-time earned from **$22,300 to $110,000 a year.** The average salary was **$76,700 a year.**

© Government of Alberta, Human Resources and Employment

Producer - Film, Radio, Television and Theatre

Produced MAY 2003

Producers co-ordinate the making of films, theatre productions, television and radio programs including everything from the initial concept to final production and distribution.

NOC Number(s): 5131.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I D S**

Duties

No two projects are exactly the same but, in general, producers:

- initiate the idea for a film, theatre production or radio/television program
- obtain the rights to a script, if necessary
- find financial backing for the venture
- hire key senior staff including directors, writers and production crew
- oversee budgets, schedules and plans
- co-ordinate the day-to-day production off and on the set or stage
- see that all post-production is completed
- negotiate with distributors and broadcasters
- promote the film, production or program.

Producers usually work closely with directors and production managers in hiring actors and production crew members. They deal with contract negotiations over salary and conditions of employment, and must be familiar with minimum wages and working conditions established by relevant unions and associations. Each department's costs must be approved by the producer, from lighting equipment to travel budgets.

Distribution is an important concern for producers. Advance press materials are often sent out before the show is completed or opens on stage. Often a short promotional version or clip is sent out for preview. Producers must then do follow-up calls and sometimes participate in promotional tours and media interviews.

Once a show is running or released, producers:

- wrap up all of the elements related to the project
- pay back any investors
- distribute residual payments to artists
- administer the business concerns of the project.

Film producers may produce commercials, TV programs, industrial training or promotional films, music videos or documentaries. Sometimes film producers write and submit proposals to bid on certain projects to win a contract.

Radio producers are usually assigned a specific show. For example, a producer may be in charge of a local morning show or an afternoon talk show. In general, they:

- determine the program content (within station guidelines)
- supervise the researchers, writers and production assistants
- ensure expenditures do not exceed a set budget.

Radio producers may also work in the control room, directing the music and information portion of the program.

Television producers are responsible for the conception, direction, production and completion of television programs within budget limitations. At larger operations, producers may specialize in news, entertainment or commercials. At smaller stations, they may assume responsibility for several programs. Producers may have some input into hiring on-air staff.

Theatrical producers co-ordinate the production of live plays and musicals. The producer's office must book venues for the play, sometimes in more than one city. Dinner theatres have theatrical producers who produce shows strictly as commercial properties.

Working Conditions

Producers work long, irregular hours. Large projects may take two or more years to complete or involve considerable travel.

Personal Characteristics

Producers working in radio, television, film or theatre need the following characteristics:

- strong leadership and communication skills
- the ability to work with a wide variety of people
- adaptability
- good judgement for hiring key people
- a passion for the work they do and an entrepreneurial spirit
- the ability to deal with stress
- willingness to be held accountable for all decisions made.

They should enjoy having variety in their work, finding innovative solutions to problems, co-ordinating productions and negotiating with people.

Educational Requirements

Producers need a broad range of background knowledge, including:

- an understanding of what each person does in the creation of a project
- a strong business background
- an understanding of Canada's tax system (to explain to financial backers the tax benefits of investing in a project)
- a good understanding of ever-changing technology.

For this reason, producers come from varied backgrounds.

- **Film producers** may come from inside the film business. In larger centres such as Toronto and Vancouver, executive producers are often lawyers or business people.
- **Radio producers** generally begin as writers, broadcasters, researchers or assistant producers. They usually have a university degree in journalism or liberal arts or a two year diploma in radio and television arts.
- **Television producers** tend to come from within the organization and work their way up through junior production jobs. They may have a university degree in arts, commerce, management or law; some have a two year diploma in radio and television arts.
- **Theatre producers** may have experience in the theatre business or be business people who recognize a successful commercial venture.

Red Deer College offers a one year post-diploma Motion Picture Arts, Advanced Certificate program and a Bachelor of Applied Motion Picture Arts degree program both with a specialization in production. The entrance requirement for both programs is two years of a post-secondary Theatre Studies Program, or equivalent, with a grade point average of at least 2.0/4. The entrance requirement for the Theatre Studies diploma program at Red Deer College is a high school diploma with English 30 or mature student status.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

For information about other degree and diploma programs in broadcasting, radio and television arts, communication arts, theatre arts and journalism, see the Actor, Announcer, Theatre Director, Film Director and Reporter occupational profiles.

For information about related workshops and support groups, contact the following organizations:

- **Calgary Society of Independent Filmmakers**
- **Film and Video Arts Society**
- **National Screen Institute of Canada.**

Employment and Advancement

(section revised JANUARY 2006)

Most **radio producers** are employed by radio broadcast companies.

Television producers are often hired on contract for specific shows, although larger television stations may have several producers on staff as well. It is possible to start as news reporter or production assistant or in entry-level positions in sales or operations and work your way up to a producer's position.

There are very few **theatrical producers** in Canada and most of them are situated in the larger cities.

Some **film and television** companies are successfully producing films and television series in Alberta. Producers may work on documentaries, training films, music videos and commercials as well as television programs and feature films.

Producers of all types are part of the larger National Occupational Classification 5131: Producers, Directors, Choreographers and Related Occupations. In Alberta, most people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,950 Albertans are employed in the Producers, Directors, Choreographers and Related Occupations group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since producers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for producers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Incomes for freelance producers, who are hired on contract to produce one specific show or a number of programs, vary considerably from one producer to another and from one year to another.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Producers, Directors, Choreographers and Related Occupations group working part-time or full-time earned from **$16,200 to $108,800 a year.** The average salary was **$46,800 a year.**

Professional Athlete

Produced MARCH 2005

Professional athletes compete in sports either individually or as team members at the paid professional level.

NOC Number(s): 5251
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M d i**

Duties

Through training, perseverance and talent, professional athletes have advanced through the amateur ranks of their sport to become paid professionals. Depending on the sport, they may compete against one opponent (e.g. tennis players) or be members of a team (e.g. hockey, football and baseball players).

Training and competition schedules vary from one sport to another but, in general, professional athletes must:

- practice daily
- be committed to a daily physical and mental training programs
- lead a healthy lifestyle that includes proper nutrition
- travel frequently
- act as ambassadors for their sport.

Working Conditions

The work is both physically and mentally demanding. Some sports require lifting items weighing up to 25 kilograms or more.

Professional athletes often work evenings, weekends and holidays. Employment is generally seasonal and those who play outdoors must cope with variable weather conditions. Some professional athletes are required to relocate quite frequently when they are traded to teams in other cities.

All sports require physical skill but some sports involve greater physical contact than others. Injuries may have permanent effects on physical health and, in some sports, the risk of injury is high.

Personal Characteristics

Professional athletes need the following characteristics:

- exceptional talent in their sport including extraordinary physical fitness, co-ordination, strength, stamina and speed
- exceptional dedication and determination
- honesty
- the ability to think quickly
- the ability to endure public criticism and the physical and emotional pressures of constant competition.

They should enjoy training and competing, taking charge of situations, and analyzing performances to identify weaknesses and strengths.

Educational Requirements

Professional athletes usually start playing their chosen sport at a young age to develop the level of skill required to become professionals.

It is becoming increasingly common for prospective professional athletes to **attend college or university** where they can continue their athletic training, acquire the education necessary for a second occupation and perhaps be scouted by a professional team. However, post-secondary education does not guarantee a job as a professional athlete. Specific paths of entry for the various sports must be followed. This information can be obtained by contacting the appropriate sports league or association.

Employment and Advancement

(section revised JANUARY 2006)

There are very few professional athletes employed in Alberta. The number of years professional athletes are physically able to maintain a high level of play is also limited. For example, the careers of football players last approximately five years. For this reason, aspiring professional athletes are encouraged to prepare for a second occupation.

Professional athletes often find there are various options open to them when they retire from active play. Their training and experience may enable them to stay involved in their sport by becoming coaches, trainers, managers, officials, scouts, athletic directors or sports commentators. Sales and promotional work also are popular fields of employment for retired athletes.

In Alberta, most people employed as athletes work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 500 Albertans are employed in the Athletes occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Salary

Salaries for professional athletes vary considerably from one sport to another and can be quite high. However, because the time spent as a professional athlete is often short, individuals may earn a relatively high income for a limited number of years.

Property Manager

Produced JANUARY 2006

Property managers oversee the administration, maintenance, operation and improvement of residential, commercial and industrial properties and represent the interests of property owners.

NOC Number(s): 1224
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M D s**

Duties

Duties vary somewhat depending on the type of property but, in general, property managers:

- prepare annual management plans for properties
- ensure that properties are properly maintained
- prepare budgets and monthly financial statements
- maintain good tenant-owner relations
- negotiate, prepare and administer leases and other legal agreements
- propose and discuss possible renovations or improvements with property owners and in some cases tenants
- deal with tenant and owner concerns such as parking, heating, maintenance, security, insurance, rent payments and the enforcement of rules, regulations and by-laws
- regularly inspect each property
- obtain quotes or bids from contractors for repairs, renovations or maintenance
- supervise janitorial and security services, building superintendents, building operators, contractors and staff
- ensure that work has been satisfactorily completed and approve invoices
- administer and maintain records of damage and security deposits or condominium fees
- collect rents and serve notices to vacate, or collect condomimium fees
- prepare reports on topics such as energy management and upgrading options
- review rents to ensure they are kept at market value.

Condominium managers regularly report to a condominium board and must act in accordance with the Condominium Property Act and all applicable bylaws.

Working Conditions

Property managers work in an office environment but are often away from the office inspecting properties and monitoring contractors. Their work days tend to be unstructured and they must deal with frequent interruptions. They work normal business hours, although long hours and evening meetings are sometimes required.

Personal Characteristics

Property managers need the following characteristics:

- good communication skills in person and in writing
- the ability to work effectively with a wide variety of people including owners, staff, contractors and tenants
- diplomacy, patience and flexibility
- the ability to negotiate effectively
- good organization and time management skills.

They should enjoy taking a methodical approach to their work, co-ordinating and supervising the work of others, and dealing with people.

Educational Requirements

Most employers prefer to hire property managers who have at least a high school diploma, business experience and computer skills. Graduation from a post-secondary program related to property management, real estate management, accounting or business administration is a definite asset. Most commercial managers have related post-secondary education.

Property managers who show suites, collect rent or prepare and administer leases and other legal documents must be licensed by the **Real Estate Council of Alberta** (RECA). To qualify for licensing, applicants must complete the six-course Real Estate Agents licensing program offered by the **Alberta Real Estate Association** (AREA) and pass a provincial qualifying exam.

The **Building Owners and Managers Association** (BOMA), the **Real Estate Institute of Canada** (REIC), the **Institute of Real Estate Management** (IREM) and the **International Facility Management Association** (IFMA) have developed a Property Management 1000 course that is recognized by RECA for property managers seeking their real estate agent's license. The Property Management 1000 course is offered by the **Real Estate Training Institute** in Edmonton and the Faculty of Continuing Education and Extension at **Mount Royal College** in Calgary. The entrance requirement is a high school diploma or equivalent. For current information about the course and mature student admission policies, please check institution calendars or websites.

Other Requirements

Certification is voluntary in Alberta.

The Real Estate Institute of Canada offers a Certified Property Manager (CPM) designation. To qualify for the CPM designation, a property manager must:

- have at least five years of experience as a property manager including one year under the supervision of a CPM (10 years of experience is required if the manager does not have a university degree)
- successfully complete specified university level and Real Estate Institute courses
- complete a long range management plan
- work full-time in real estate management.

The Building Owners and Managers Association (BOMA) offers a Real Property Administrator (RPA) designation. To qualify for the RPA designation, property managers must successfully complete eight designated courses covering a wide range of topics related to property management. Some of these courses can be taken at the University of Alberta in Edmonton, the University of Calgary, Mount Royal College in Calgary, or through home study.

The Canadian Condominium Institute offers a Professional Associate (ACCI) designation.

Employment and Advancement

Property managers are employed by:

- governments
- corporations (including condominium corporations)
- individual owners
- property management firms that manage properties such as shopping malls, warehouses, office towers, condominiums and other residential buildings.

Some property managers work on a contract basis and charge property owners on a fee-for-service basis.

Advancement opportunities depend on the individual's level of skill, education, motivation, attitude and performance. A professional designation is not always required but most employers consider it important.

The number of building starts in a community is a good indicator of the employment situation for property managers in that community. More buildings generally means a greater demand for property managers.

Property managers are part of the larger National Occupational Classification 1224: Property Administrators. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Finance, Insurance and Real Estate**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta

- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 4,300 Albertans are employed in the Property Administrators occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 90 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for property managers vary greatly depending on the employing organization, the responsibilities involved and the background of the manager.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Property Administrators occupational group working part-time or full-time earned from **$9,900 to $52,700 a year.** The average salary was **$32,700 a year.** Commercial property managers may earn considerably more.

Prosthetic/Orthotic Technician

Produced MARCH 2005

Prosthetic/orthotic technicians work with prosthetists and orthotists in the production, fabrication and repair of prostheses (artificial limbs) and orthoses (braces and supports) that are used to support weakened body parts, correct body defects or replace amputated limbs.

NOC Number(s): 3219.4
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O I M**

Duties

Prosthetic/orthotic technicians may specialize in prosthetics or orthotics, or work on both types of devices. In general, they:

- design, fabricate and refurbish orthotic/prosthetic devices from plaster cast positives and assessment forms
- make othotic/prosthetic devices using materials such as thermoplastic and thermosetting materials, metal alloys and leather
- service and repair appliances as required
- maintain an inventory of materials
- help serve patients as directed
- service and repair machinery used in the fabrication of devices.

Working Conditions

Prosthetic/orthotic technicians usually work in laboratories and workshops, standing at workbenches and using a variety of machines such as grinders, sanders, buffers, drill presses, lathes, welding equipment and sewing machines. They may be required to lift items weighting up to 25 kilograms.

At times, technicians may be under pressure to meet deadlines.

Personal Characteristics

Prosthetic/orthotic technicians need the following characteristics:

- good manual dexterity
- strength and stamina
- patience
- mechanical ability and inventiveness
- the ability to work quickly
- good problem-solving and decision-making skills
- good interpersonal skills
- good communication skills
- the ability to work well as a member of a team.

They should enjoy working with tools and machinery at tasks requiring precision, analyzing measurements and building devices, and having clear rules and guidelines for their work.

Educational Requirements

Prosthetic/orthotic technicians need at least a basic knowledge of mathematics, chemistry, physics and biology. They may be trained on the job or have a combination of related formal and on-the-job training.

George Brown College of Applied Arts and Technology in Toronto offers a two year Orthotic/Prosthetic Technician program. The entrance requirement is a high school diploma or equivalent with at least Grade 11 physics and biology. Admissions tests, an interview and manual dexterity tests are required. For more information about the program and mature student admission, please check the College calendar or website.

Other Requirements

Prosthetic/orthotic technicians may write examinations in prosthetics or orthotics to register with the **Canadian Board for Certification of Prosthetists and Orthotists**. There are two ways to become registered:

- After four years of on-the-job training, candidates supervised by a certified orthotist or prosthetist, or a registered orthotic or prosthetic technician, may write a registration examination in prosthetics or orthotics. If they so desire, after an additional 24 months under a certified practitioner, they may write the required examination for the other specialization (prosthetics or orthotics).
- After successful completion of the technical diploma program at George Brown College and 22 months of on-the-job training, prosthetic/orthotic technicians may write a registration examination in prosthetics or orthotics. An additional 12 months under a certified practitioner is required to write the examination for the other specialization.

Employment and Advancement

(section revised JANUARY 2006)

Prosthetic/orthotic technicians are employed in:

- private clinics
- hospital rehabilitation departments
- government agencies.

Prosthetic/orthotic technicians may advance to supervisory positions.

Prosthetic/orthotic technicians are part of the larger National Occupational Classification 3219: Other Medical Technologists and Technicians (Except Dental Health). In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Health Care and Social Assistance**
- **Other Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 200 Albertans are employed in the Other Medical Technologists and Technicians (Except Dental Health) occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since prosthetic/orthotic technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for prosthetic/orthotic technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for prosthetic/orthotic technicians vary considerably, ranging from **$33,000 to $46,000 per year (2005 estimate).**

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Medical Technologists and Technicians (Except Dental Health) occupational group working part-time or full-time earned from **$26,900 to $74,600 a year.** The average salary was **$61,000 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

© Government of Alberta, Human Resources and Employment

Prosthetist and Orthotist

Produced MARCH 2005

Prosthetists and orthotists work from physicians' prescriptions to design, fabricate, fit and repair prosthetic devices (artificial limbs) and orthotic devices (braces and supports) which are used to support weakened body parts, correct body defects or replace lost limbs.

NOC Number(s): 3219.3
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O I D**

Duties

Prosthetists and orthotists may specialize in prosthetics or orthotics, or work on both types of devices. In general, they:

- examine clients to identify factors affecting the fit of devices
- measure clients, take negative impressions and make plaster/fiberglass casts of limbs for which appliances will be made, or capture shapes digitally to assure proper fit
- select appropriate materials and design devices
- fabricate devices or supervise the work of prosthetic/orthotic technicians
- fit and adjust finished products for maximum comfort and usefulness.

Most prosthetists and orthotists work with health care professionals on rehabilitation teams and follow up with clients to ensure proper device function over time.

Working Conditions

Prosthetists and orthotists work in a variety of settings including clinics, laboratories, work rooms and fitting rooms. They work directly with clients to develop specifications for fabrication. Usually, they work a regular five day work week but weekend work may be required for emergency cases.

Prosthetists and orthotists stand for long periods of time and may be required to lift items weighing up to 25 kilograms.

Personal Characteristics

Prosthetists and orthotists need the following characteristics:

- strong communication skills
- patience and problem-solving skills
- the ability to work with a variety of people including clients, physicians, physical therapists, nurses and technicians
- time management and organizational skills
- manual dexterity
- mechanical aptitude
- good physical health.

They should enjoy working with tools, instruments and machinery at tasks requiring precision, analyzing specifications and solving problems, and directing the activities of others.

Educational Requirements

Prosthetists and orthotists who own their own businesses need business skills as well as clinical and technical skills.

In Canada, the following institutions offer accredited prosthetic/orthotic programs in English:

- The **British Columbia Institute of Technology (BCIT)** in Burnaby offers a two year Prosthetics and Orthotics Technology diploma program. The entrance requirement is a high school diploma with at least a C+ average and courses in Grade 12 English and mathematics and Grade 11 physics. Metal and wood working experience is recommended.
- The **George Brown College of Applied Arts and Technology** in Toronto offers a two year Clinical Methods in Orthotics/Prosthetics diploma program. The entrance requirement is successful completion of the Orthotic/Prosthetic Technician program offered by the College or a degree in a related science.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Graduates of clinical programs must enter an internship program to specialize in prosthetics or orthotics, or both (see below).

Other Requirements

After completing an internship of twenty-two months under the supervision of a certified prosthetist or orthotist, graduates of clinical programs are eligible to write the National Certification Examination in prosthetics or in orthotics, set by the Canadian Board for Certification of Prosthetists and Orthotists. This certification is required by most provincial funding agencies. To qualify to take the examination for the second discipline, those who are certified in a first discipline must complete a further 22 months of practical experience and internship in that area of specialty.

Employment and Advancement

(section revised JANUARY 2006)

Prosthetists and orthotists are employed in:

- private clinics and device manufacturing companies
- hospital rehabilitation departments and government agencies
- ambulatory care services and special treatment facilities (e.g. arthritis centres).

Many prosthetists and orthotists set up their own companies and work independently.

Prosthetists and orthotists are part of the larger National Occupational Classification 3219: Other Medical Technologists and Technicians (Except Dental Health). In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Health Care and Social Assistance**
- **Other Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 200 Albertans are employed in the Other Medical Technologists and Technicians (Except Dental Health) occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since prosthetists and orthotists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for prosthetists and orthotists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Certified prosthetists/orthotists earn from **$44,000 to over $65,000 per year.** Those who own their own businesses may earn more **(2005 estimates).**

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Medical Technologists and Technicians (Except Dental Health) occupational group working part-time or full-time earned from **$26,900 to $74,600 a year.** The average salary was **$61,000 a year.**

© Government of Alberta, Human Resources and Employment

Psychiatric Aide

Produced FEBRUARY 2005

Psychiatric aides work under the direct supervision of health care professionals caring for people who are mentally ill, developmentally handicapped, cognitively impaired or brain injured.

NOC Number(s): 3413
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **S M o**

Duties

In hospitals, psychiatric aides:

- provide routine physical, emotional, psychological and rehabilitation care for patients
- assist with treatments and procedures
- organize and supervise activities
- assist in maintaining a clean, orderly and safe environment
- attend to the personal needs of patients
- observe and assist patients.

In long-term care facilities, psychiatric aides perform a variety of routine unit/group home functions related to the care of people who have developmental disabilities. For example, psychiatric aides may:

- provide health maintenance and hygiene services (bathing, feeding, dressing)
- observe, report and record behaviours
- escort residents going to off-unit programs and activities, medical appointments or shopping malls
- teach daily living skills.

Psychiatric aides are primary care givers who allow the individuals they care for to take as much responsibility as possible in daily planning and decision making.

Working Conditions

This work can be physically and emotionally demanding. Aides spend much of their shift on their feet and do a great deal of repetitive bending, stretching and lifting (up to 25 kg).

Shift work is required in hospitals and long-term care facilities.

Personal Characteristics

Psychiatric aides should possess the following characteristics:

- patience and tolerance
- the ability to remain calm in stressful situations
- physical strength and manual dexterity
- the ability to follow instructions
- good observation skills
- good communication skills
- the ability to work effectively as a member of a team.

They should enjoy helping people, having clear guidelines and organized methods for their work, and operating tools, equipment and machinery.

Educational Requirements

Psychiatric aides receive **extensive in-service training** particularly during their first month of employment.

Job applicants should have a high school diploma and current CPR (Cardiopulmonary Resuscitation) certification. Experience in dealing with special populations, first aid certification, social science courses at the post-secondary level or training as a personal care attendant are definite assets. For information about related training programs, see the Personal Care Attendant occupational profile.

Employment and Advancement

(section revised JANUARY 2006)

Psychiatric aides work in institutions for the:

- brain injured
- aged
- mentally ill
- developmentally handicapped
- physically ill.

Without additional education, advancement opportunities for psychiatric aides are limited.

Psychiatric aides are part of the larger National Occupational Classification 3413: Nurses Aides and Orderlies. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 18,150 Albertans are employed in the Nurses Aides and Orderlies occupational group which is expected to grow 2.7 to 3.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 490 to 680 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since psychiatric aides form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for psychiatric aides.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Nurse Aides and Orderlies occupational group working part-time or full-time earned from **$13,300 to $73,200 a year.** The average salary was **$24,700 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Psychiatric Nurse

Produced SEPTEMBER 2004

Psychiatric nurses provide professional nursing and mental health nursing services in mental health care facilities and in the community. They promote and help people restore and maintain good mental health.

NOC Number(s): 3152.4
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **S M D**

Duties

Psychiatric nurses may work independently or as part of a health care team. In general, they may:

- complete physical and mental health assessments
- develop strategies for helping clients to be as independent as possible
- plan, implement and document physical and mental health nursing care plans
- evaluate and update nursing care plans as needed
- provide nursing care as needed
- administer and assess the effects of prescribed medications and treatments
- observe and report behavioural changes
- encourage patients to participate in interpersonal and other therapeutic activities to enhance their interpersonal skills
- teach strategies and activities designed to promote wellness.

In developing and implementing therapeutic programs, psychiatric nurses work in co-operation with other health care professionals including psychiatrists, physicians, psychologists, social workers, recreational therapists and occupational therapists.

For information about nursing duties in acute care and long term care settings, see the Registered Nurse occupational profile.

Working Conditions

Psychiatric nursing can be intellectually, physically and emotionally demanding. In institutional settings, nurses work a variety of shifts including nights, weekends and holidays. They may be required to assist with lifting and transferring patients, and direct or assist with meeting patients' basic needs.

Working in community settings may involve driving to various locations.

Personal Characteristics

Psychiatric nurses need the following characteristics:

- patience, understanding and a caring attitude
- maturity and self-discipline
- problem-solving and critical-thinking abilities
- effective verbal and written communication skills
- good judgment, especially in stressful situations
- good physical health.

They should enjoy working with and consulting others, taking a methodical approach to compiling information and administering treatments, and directing the work of others.

Educational Requirements

The minimum education requirement for psychiatric nurses is a **diploma in psychiatric nursing**.

In Alberta, the following post-secondary institutions offer programs specifically related to psychiatric nursing:

- **Grant MacEwan College** in Edmonton offers a two year Psychiatric Nursing diploma program at its Alberta Hospital Ponoka campus. The entrance requirement is a high school diploma or equivalent with an average of at least 65 per cent in English 30, Biology 30, Chemistry 30 or Science 30, Math 30 or 31, and one other 30-level subject from the humanities, sciences or fine arts. An immunization and clear security clearance are also required.
- **Mount Royal College** in Calgary offers a six course Advanced Studies in Mental Health certificate program by online distance education. Applicants must be registered nurses (or eligible for registration) or registered psychiatric nurses, or have a post-secondary diploma or degree in a related discipline such as social work. With permission from the co-ordinator, fourth year nursing students and people already working in the field may register in individual courses.

For current information about programs and mature student admission policies, please check post-secondary calendars or websites.

For information about post-secondary programs for registered nurses, see the Registered Nurse occupational profile.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Health Disciplines Act and Psychiatric Nurses Regulation, only registered members of the Registered Psychiatric Nurses Association of Alberta (RPNAA) may call themselves Psychiatric Nurses. Registered members provide health services listed in the Regulation.

Employment and Advancement

(section revised JANUARY 2006)

Approximately one third of the psychiatric nurses employed in Alberta work in two large psychiatric hospitals. Most of the rest are employed by:

- community mental health programs/clinics, support services for persons who have disabilities, and chemical dependency (drug and alcohol) centres and programs
- residential care and institutional facilities for people who have developmental handicaps
- acute care facilities (e.g. hospitals)
- extended care facilities
- school boards
- correctional institutions
- youth centres
- social service departments
- halfway houses.

Psychiatric nurses also may work as consultants to community agencies, public health nurses or foster home parents.

Psychiatric nurses are part of the larger National Occupational Classification 3152: Registered Nurses. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 27,150 Albertans are employed in the Registered Nurses occupational group which is expected to grow 3.3 to 4.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that over 600 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since psychiatric nurses form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for psychiatric nurses.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for nurses vary depending on the employer and the nurse's educational qualifications, experience and responsibilities.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Psychiatric Nurses occupational group working part-time or full-time earned from **$37,700 to $61,700 a year.** The average salary was **$54,200 a year.**

Psychiatrist

Produced OCTOBER 2004

Psychiatrists are physicians (medical doctors) who specialize in the diagnosis and treatment of mental illness and emotional disorders, and act as consultants for other physicians.

NOC Number(s): 3111.1
Minimum Education: 8 + years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I S D**

Duties

In general, psychiatrists:

- assess each patient individually
- design care plans which may include treatments ranging from family or group therapy to medication management
- counsel outpatients and other patients in their offices
- visit patients in hospitals
- attend meetings with other hospital staff to discuss treatment plans and progress
- diagnose and treat mental health emergency cases in hospital emergency rooms
- engage in research to further knowledge related to mental health
- speak to community groups and organizations about mental health issues
- serve on committees to promote and maintain mental health services and delivery systems in their communities
- teach in university medical schools.

Most psychiatrists work as members of health care teams that often include other physicians, psychologists, social workers, psychiatric nurses and other health care professionals.

Psychiatrists may specialize in caring for people in particular age groups (e.g. children, the elderly) or in caring for people who suffer from particular types of disorders. Their treatment approaches may be primarily analytic, psychotherapeutic or biological but they should be able to provide or refer patients for all types of approaches.

Some psychiatrists conduct research into brain structure, biochemistry or psychotherapy.

Working Conditions

Psychiatrists work in hospitals, mental health clinics and private offices. Like other physicians, they often work long hours. Some have private practices as well as being on staff at hospitals and most staff psychiatrists participate in an on-call roster.

Personal Characteristics

Psychiatrists need the following characteristics:

- the intellectual ability required to successfully complete the academic training
- a genuine interest in people and a desire to help them
- the stamina required to work long hours
- emotional strength and maturity
- an understanding of their own personalities, strengths and weaknesses
- a high tolerance for uncertainty
- good communication skills
- the ability to inspire trust

- the ability to work with patients collaboratively to help them get better.

Psychiatrists should enjoy co-ordinating information, dealing with people and directing the work of others.

Educational Requirements

In Canada, psychiatrists must take **11 to 12 years of training after high school**. They must successfully complete a **Doctor of Medicine** (MD) degree, then complete a five year post-graduate residency training program with a specialization in psychiatry.

In Alberta, MD programs are offered by the following institutions:

- The **University of Alberta** in Edmonton. The entrance requirement is satisfactory completion of at least two years of university studies with courses in organic and inorganic chemistry, English, physics, biology, biochemistry and statistics.
- The **University of Calgary**. The entrance requirement is completion of at least three years of recommended Arts and Sciences courses at a recognized post-secondary institution.

Because these are quota programs, many applicants who fulfil the entrance requirements cannot be accepted. Successful applicants are selected on the basis of:

- academic grades
- letters of recommendation
- personal interviews
- the results of a Medical College Admission Test (MCAT).

The required university courses may be taken entirely at the University of Calgary or the University of Alberta or, in part, at other post-secondary institutions.

Post-secondary institutions across Alberta offer university transfer programs that allow students to apply up to two years of study toward university Bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer. When planning their university studies, prospective students should contact both Faculty of Medicines' admissions offices to ensure that they acquire all of the necessary prerequisites.

In general, the admission requirement for university and university transfer programs is a high school diploma or equivalent with a specified minimum average (ranging from 65 to 80 per cent) in English 30, Pure Math 30 and three other appropriate Grade 12 subjects (usually Biology 30, Physics 30 and Chemistry 30).

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Medical Profession Act, you must be a registered member of the College of Physicians and Surgeons of Alberta (CPSA) to practice medicine in Alberta.

Employment and Advancement

(section revised JANUARY 2006)

Many psychiatrists have their own private practices. In addition, psychiatrists may apply for privileges to work in general hospitals that have psychiatric wards or outpatient clinics. They also may enter into contractual arrangements to work in:

- provincial psychiatric hospitals and mental health clinics
- school districts
- community agencies
- outpatient clinics
- university medical schools.

Psychiatrists may specialize in particular types of patients (e.g. children) or types of disorders, or advance to supervisory or administrative positions in the health field.

Psychiatrists are part of the larger National Occupational Classification 3111: Specialist Physicians. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,600 Albertans are employed in the Specialist Physicians occupational group which is expected to grow 3.5 to 4.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 90 to 120 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since psychiatrists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for psychiatrists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Most psychiatrists in private or group practice are paid by provincial health insurance programs according to the volume and type of services they provide. Their incomes vary widely.

Psychologist

Produced JULY 2005

Psychologists assess, diagnose and treat psychological, emotional and behavioural disorders. They also research and apply theories relating to behaviour and mental processes.

NOC Number(s): 4151
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S I M**

Duties

Psychologists are concerned with the study and management of human behaviour. Since the field is so broad, they usually specialize in a particular area.

Clinical psychologists diagnose and treat emotional or adjustment problems in children, adults, families or groups. They treat the psychological factors associated with physical health problems. They may use a variety of assessment methods to assess problems and to design, implement and evaluate treatment programs. Clinical psychologists may specialize further in:

- adult or child clinical psychology
- health psychology
- forensic psychology
- clinical neuropsychology.

Clinical psychologists spend much of their time in direct contact with clients and are usually employed in hospitals, clinics, mental health facilities, prisons or private practice.

Counselling psychologists provide individual, group or family counselling services, and spend the majority of their time in direct contact with clients. They may use a variety of assessment methods to provide consulting services to schools, social service agencies and businesses. Counselling psychologists may be employed in clinics, schools or rehabilitation centres or in private practice.

School psychologists assess and treat children who have educational, vocational and emotional problems, or provide consulting services for schools on issues related to classroom management. School psychologists may be employed by school authorities or work in private practice.

Industrial/organizational psychologists develop solutions for problems in business and industry. For example, they may work in areas such as:

- personnel selection and placement
- training and development
- organizational development and change
- performance measurement and evaluation
- quality of work life
- consumer psychology
- human factors psychology.

Although some large corporations employ industrial/organizational psychologists, most work as consultants.

Research or experimental psychologists conduct research in specific areas such as human development, psychopathology, social psychology, neuroscience, perception, motivation, emotion, learning, language or personality. Their research may involve observing and interviewing people to gain insight into behaviour, or working in laboratory settings where they focus on the effects of environment and heredity on human and animal behaviour. Research psychologists are usually employed by colleges and universities, government departments or private research agencies.

Working Conditions

Research psychologists spend most of their time in offices and research laboratories. Other types of psychologists may work in a variety of settings. Some routinely travel to several locations (e.g. school to school).

Psychologists' hours of work vary depending on their circumstances. They may work regular office hours or do some evening and weekend work as well.

Personal Characteristics

Psychologists who work directly with people need the following characteristics:

- a genuine interest in helping others
- emotional maturity and stability
- excellent communication skills
- a willingness to keep learning new approaches
- flexibility.

They should enjoy helping people, synthesizing information and developing innovative solutions to problems, and taking a methodical approach to reviewing literature and administering psychological tests.

Educational Requirements

(section revised SEPTEMBER 2005)

In Alberta, the minimum education requirement for psychologists is a master's degree with the coursework required to become a Chartered Psychologist. For example, it may be a Master of Arts (MA), Master of Science (M.Sc.) or Master of Education (M.Ed.) degree. In most Canadian provinces and American states, the minimum requirement is a doctoral (PhD) degree in a relevant aspect of psychology. Most clinical psychologists have a doctoral degree in clinical psychology; those who work in specialized settings such as clinical neuropsychology may have further training.

In Alberta, the following institutions offer appropriate **master's and doctoral** degree programs:

- The **Campus Alberta Graduate Program in Counselling**, a tri-university partnership of Athabasca University, the University of Calgary and the University of Lethbridge, offers a Master of Counselling degree program with a specialization in counselling psychology.
- The **University of Alberta** in Edmonton offers MA, M.Sc. and PhD degree programs in psychology, and M.Ed., Ed.D and PhD degree programs in educational psychology. St. Stephens College, affiliated with the University of Alberta, offers a MA degree program in pastoral psychology and counselling.
- The **University of Calgary** offers M.Sc. and PhD degree programs in clinical psychology, industrial/organizational psychology and psychology, and M.Ed., M.Sc. and PhD degree programs in educational psychology.
- The **University of Lethbridge** offers MA and M.Sc. degree programs in psychology.

The entrance requirement for a master's degree program in psychology is usually an acceptable average in a four year bachelor's degree program with a specialization in psychology (honours program preferred). In Alberta, the following institutions offer **four year** bachelor's degree programs with a major in psychology or educational psychology:

- **Athabasca University** offers a Bachelor of Arts (BA) degree program in psychology by distance education.
- **Canadian University College** in Lacombe offers a Bachelor of Science (B.Sc.) degree program in psychology.
- **Concordia University College of Alberta** in Edmonton offers a BA program in psychology with an applied emphasis.
- **Grande Prairie Regional College** offers a BA program in psychology in collaboration with Athabasca University.
- **Red Deer College** offers a BA degree (granted by the University of Calgary).
- **Taylor University College and Seminary** in Edmonton offers a BA program in psychology.
- **The King's University College** in Edmonton offers a BA program in psychology.
- **Red Deer College** offers BA and B.Ed. degree programs in collaboration with the University of Calgary and the University of Alberta.
- **Rocky Mountain College** in Calgary offers a BA in Human Services with a specialization in counselling psychology.
- **University of Alberta** in Edmonton offers BA, B.Sc. and B.Ed. degree programs in psychology and educational psychology.
- **University of Calgary** offers BA, B.Sc. and B.Ed. degree programs in psychology and educational psychology.
- **University of Lethbridge** offers BA, B.Sc., B.Ed. and combined degree programs in psychology and

educational psychology.

Entrance requirements for these programs vary but, in general, include a high school diploma with an average of at least 60 to 80 per cent (depending on the program) in English Language Arts 30-1 (or English 30) and four other approved Grade 12 subjects (e.g. Social Studies 30, Pure Math 30, Biology 30, Chemistry 30, a 30-level language other than English). Admission to Athabasca University is open to residents of Canada who are at least 18 years of age.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of their college course work toward university Bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Psychology Profession Act and Psychology Profession Regulation, only registered members of the College of Alberta Psychologists (CAP) may call themselves Psychologists or Chartered Psychologists. However, counsellors and others may provide services that are not defined as restricted activities in the Government Organization Act.

Employment and Advancement

(section revised JANUARY 2006)

Psychologists work in:

- mental health clinics
- correctional facilities
- hospitals
- private practices
- rehabilitation centres
- schools
- business and industrial settings
- post-secondary institutions.

Increasingly, psychologists are employed in program development and evaluation, community consultation and the administration of social services and mental health services provided by government and community agencies.

With experience or additional education, psychologists may move into administrative positions or teach psychology in post-secondary institutions.

In Alberta, over 75 per cent of people employed as psychologists work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,100 Albertans are employed in the Psychologists occupational group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 70 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Psychologists occupational group working part-time or full-time earned from **$17,500 to $172,700 a year.** The average salary was **$61,200 a year.**

© Government of Alberta, Human Resources and Employment

Public Health Inspector

Produced DECEMBER 2003

Public health inspectors prevent disease and promote health by educating people about public health issues and enforcing health legislation.

NOC Number(s): 2263
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I D**

Duties

Public health inspectors investigate health-related complaints and inspect facilities to ensure that they comply with public health legislation and regulations. They inspect a variety of facilities, including:

- food processing, preparation and service establishments
- waste management systems
- workplaces
- hotels, motels and other accommodations
- schools
- child care and long term care facilities
- animal facilities
- private water supplies
- swimming pools, public beaches and recreational camps
- places of entertainment.

In general, public health inspectors assess the particular circumstances, provide advice and ensure compliance with policies and regulations regarding:

- food and water borne communicable diseases
- insect and rodent control
- food problems and institutional sanitation
- public health complaints
- outdoor and indoor air quality
- contaminated land.

Public health inspectors also educate the public to help people understand regulations and the need for proper health protection. For example, they may be involved in injury prevention programs, tobacco control programs or other health promotion programs.

Working Conditions

Public health inspectors spend a significant portion of their time conducting inspections in a wide range of work settings. While in their offices, they prepare reports, set up schedules and answer questions from the public. They normally work alone but may consult with other health team members and health professionals.

Public health inspectors usually work regular office hours. However, overtime is sometimes required.

Lifting up to 10 kilograms may be required.

Personal Characteristics

Public health inspectors need the following characteristics:

- good interpersonal skills
- good communication skills

- problem-solving and decision-making skills.

They should enjoy having clear rules and organized methods for their work, analyzing information and dealing with people.

Educational Requirements

Public health inspectors must have **a bachelor's degree in a related discipline**.

In Alberta, post-secondary institutions throughout the provide offer related degree programs. **Concordia University College of Alberta** in Edmonton offers a Bachelor of Environmental Health (after degree) program. The entrance requirement is an undergraduate degree, preferably a Bachelor of Science degree in a related discipline.

Outside Alberta:

- the **British Columbia Institute of Technology (BCIT)** in Burnaby offers a Bachelor of Technology program in Environmental Health. This two year program is designed for people who have already completed a technical diploma program or two years of post-secondary study with a strong sciences emphasis. Preference is given to applicants who have completed their entrance requirements within five years of applying and have at least a B in English and C+ in the required science courses.
- **Ryerson University** in Toronto offers a four year Bachelor of Applied Science - Occupational and Public Health degree program. The entrance requirement for Alberta applicants is an Alberta high school diploma with an overall average of at least 70 per cent in five academic Grade 12 subjects (including English 30) and a minimum of 60 per cent in Chemistry 30 or Biology 30. Both sciences, as well as Physics 30 and Math 30 or 31 (or equivalent) are recommended. Ryerson also offers a two year program for applicants who already have a bachelor's degree from an accredited university.
- the **University College of Cape Breton** in Sydney, Nova Scotia offers a four year Bachelor of Technology program in Environmental Health. The entrance requirement is a high school diploma with an average of at least 60 per cent in required English, math and chemistry courses. Physics is recommended.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Except in Quebec, public health inspectors must be certified by the Board of Certification of the Canadian Institute of Public Health Inspectors. Candidates who have an approved bachelor's degree in public health and twelve weeks of acceptable field work experience must pass national examinations and submit two field reports to qualify for the Certificate of Public Health Inspection (Canada) designation.

Employment and Advancement

(section revised JANUARY 2006)

Public health inspectors are employed in:

- regional, provincial and national health departments
- environmental and pollution control departments
- industry
- sewage and water treatment plants
- agencies interested in industrial health and hygiene or food sanitation
- solid waste management agencies.

The greatest number of public health inspector positions are found in local public health agencies. Public health inspectors may also work as private consultants.

Experienced inspectors may advance from staff inspector to environmental health specialist and senior inspector positions, and possibly to chief inspector or director positions.

Public health inspectors are part of the larger National Occupational Classification 2263: Inspectors in Public and Environmental Health and Occupational Health and Safety. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Oil and Gas Extraction**

- **Professional and Technical Services**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,100 Albertans are employed in the Inspectors in Public and Environmental Health and Occupational Health and Safety occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since public health inspectors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for public health inspectors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Inspectors in Public and Environmental Health and Occupational Health and Safety occupational group working part-time or full-time earned from **$18,300 to $172,300 a year.** The average salary was **$62,500 a year.**

Public Relations Representative

Produced DECEMBER 2005

Public relations representatives help organizations achieve their objectives by facilitating communication links between organizations and the audiences they wish to reach.

NOC Number(s): 5124
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M S**

Duties

Duties and responsibilities vary from one position to another but, in general, public relations representatives:

- create and maintain public awareness of their organizations' policies and actions
- foster good community relations
- facilitate communications within the organization between employees and management
- develop, implement and evaluate strategic communications programs
- act as media and stakeholder contacts for their organizations
- conduct research (e.g. public opinion and attitude surveys) and communicate results
- prepare speeches, news/media releases, brochures, audio-visuals, advertisements, reports, articles, newsletters and websites for defined audiences
- identify the interests and concerns of key groups their organizations serve
- co-ordinate special events and promotions for internal and external audiences
- manage issues that relate to their organization
- provide consultative services to management to facilitate communications with target groups.

Junior employees handle routine work such as:

- responding to requests for information from the public
- researching and writing copy for specific projects
- conducting tours of organizational facilities
- writing news releases and pitching story ideas to the media
- media tracking and issue tracking
- assisting senior practitioners with projects or programs
- maintaining current distribution lists.

Senior employees may:

- respond to requests for information from the media or designate another appropriate spokesperson
- work with other managers to identify trends and issues and determine strategies for implementing public relations programs
- integrate goals and objectives from the organization's business plan to develop public relations programs and strategies
- advise managers regarding how communications and perceptions affect business issues and decisions.

Once a program concept is approved, the public relations department is responsible for implementing the program and budgeting, managing and evaluating the results.

Working Conditions

Work schedules for public relations representatives are often irregular and subject to frequent interruption. Meeting project deadlines may require working overtime. Considerable travel may be involved.

Personal Characteristics

Public relations representatives need the following characteristics:

- creativity
- initiative
- good oral and written communication and presentation skills
- excellent interpersonal skills including good coaching, consultation and negotiation skills
- self-confidence
- the ability to analyze problems and find practical solutions
- sensitivity
- excellent organizational, multi-tasking and planning abilities.

They should enjoy co-ordinating information and finding innovative ways to handle problems, taking a methodical approach to gathering, researching and editing information, and persuading people.

Educational Requirements

Employers generally prefer to hire applicants who have post-secondary education related to public relations or communications. Many employers require a combination of qualifications such as a degree in any field plus a diploma or additional degree in public relations, communications or journalism. They also may require applicants to be members or eligible for membership in a professional organization such as the **Canadian Public Relations Society (CPRS)** or the **International Association of Business Communicators (IABC)**. Keyboarding and computer skills are a definite asset.

Post-secondary institutions across Alberta offer related diploma and degree programs. The following institutions offer programs specifically in public relations or communications:

- **Athabasca University** offers a post-diploma Bachelor of Professional Arts degree program in Communications Studies through distance education. Applicants must hold a recognized two or three year diploma in a related field from a college or technical institute, or equivalent.
- **Grant MacEwan College** in Edmonton offers a Public Relations diploma program. The entrance requirements are a minimum of 30 post-secondary credits including post-secondary English or equivalent, and at least 70 per cent on an English entrance exam. The College also offers a Bachelor of Communications in Professional Writing degree program.
- **Lethbridge Community College** offers a two year Communication Arts diploma program with a specialization in advertising/public relations. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English Language Arts 30-1 (or 70 per cent in ELA 30-2, or equivalent) and Social Studies 30. A 500 word composition also is required.
- **Mount Royal College** in Calgary offers a Bachelor of Applied Communications degree program with a specialization in public relations. The entrance requirement is a high school diploma or equivalent with an average of at least 60 per cent in English Language Arts 30-1, Social Studies 30 and three other appropriate Grade 12 subjects. The College also offers a four course Basic Public Relations program through Continuing Education.
- The **University of Calgary** offers four year degree and five year co-operative education degree programs in Communications Studies. The entrance requirement is a high school diploma or equivalent with a competitive average in English Language Arts 30-1 or English 30, Pure or Applied Math 30 or Math 31 (or equivalent), and three of the following: Biology 30, Chemistry 30, Physics 30, Social Studies 30, Science 30, a language 30 other than English, one five credit Grade 12 subject. French 30, 30S, 30N, Francais 30 or French Language Arts 30 is strongly recommended.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

For information about journalism programs, see the Reporter occupational profile.

Employment and Advancement

(section revised JANUARY 2006)

Public relations representatives are employed by:

- federal, provincial and municipal governments
- corporations and consulting firms
- professional organizations and trade associations
- health authorities

- educational institutions
- financial institutions
- political and social organizations
- industry organizations.

Freelancing as a consultant is an alternative for those who have experience in government or the private sector. There also are opportunities to work for public relations/marketing firms as consultants.

Public relations representatives are part of the larger National Occupational Classification 5124: Professional Occupations in Public Relations and Communication. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Professional and Technical Services**
- **Repair, Maintenance, Personal and Other Services**
- **Information, Culture and Recreation**
- **Finance, Insurance and Real Estate**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 4,050 Albertans are employed in the Professional Occupations in Public Relations and Communication occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since public relations representatives form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for public relations representatives.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Professional Occupations in Public Relations and Communications occupational group working part-time or full-time earned from **$19,800 to $104,900 a year.** The average salary was **$55,400 a year.**

Pulpmill Operator

Produced OCTOBER 2005

Pulpmill operators operate and monitor processing machinery and equipment to produce pulp for use in the production of paper.

NOC Number(s): 9432
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: O M i

Duties

Pulpmills use different processes to extract cellulose fibres from wood chips, sawmill residues and other raw materials. In kraft mills, huge pressure cookers called digesters mix wood chips with soda-based chemicals to break the fibres down into pulp. In CTMP mills, a chemithermomechanical (CTMP) process is used. The complexity of these operations varies from one situation to another.

Pulpmill operators' duties and responsibilities vary depending on the type of equipment but, in general, they:

- operate and monitor screening equipment, mixing tanks, washers, hoisting equipment, forming, cutting and packaging equipment or other machines used in cellulose processing
- monitor equipment and machinery panel indicators, gauges, level indicators and other equipment instruments to detect malfunctions and ensure processing steps are carried out according to specifications
- initiate changes or communicate with the control operator to make process adjustments and start up or shut down machinery and equipment as required
- collect processing samples and conduct titration tests, pH readings and other routine tests on pulp and solutions
- maintain and complete production reports.

Working Conditions

Pulpmill operators work shifts. They work in an environment that is often hot, humid and noisy. Kraft mills are sometimes smelly. Safety shoes, hard hats, ear plugs, safety glasses and other safety equipment are required to reduce the risk of injury. Overtime is sometimes required.

The work involves considerable walking, standing and climbing ladders or stairs. Lifting up to 10 kilograms may be required.

Personal Characteristics

Pulpmill operators need the following characteristics:

- manual dexterity and mechanical aptitude
- the ability to work in a potentially hot, damp or dusty environment
- the ability to wait for lunch breaks until operational demands permit time
- the ability to perform repetitious tasks and remain alert
- good oral communication skills and the ability to work well as part of a team.

In pulp mills operating on a self-directed work team structure, operators also need the management skills required for activities such as planning and scheduling, budgeting, training and coaching other workers.

All pulpmill operators should enjoy operating and monitoring equipment, having clear parameters and organized methods for their work, and working with others to solve problems.

Educational Requirements

The minimum education requirement is a high school diploma but some employers require operators to have specific courses such as English Language Arts 30-2 and Applied or Pure Math 30, or equivalent, and a fourth class power engineering certificate (see the Power Engineer occupational profile). Computer skills are a definite asset, especially skills related to data input, word processing, spread sheet development and dealing with digital or analogue outputs for controlling processing equipment.

Pulpmill operators **learn on the job.** They usually start in entry level labouring positions and progress to higher level positions as they become available. Some mills routinely rotate operators through different areas.

Employment and Advancement

(section revised JANUARY 2006)

Pulpmill operators are employed in pulp mills that are usually located near forested areas. Union membership may be a condition of employment.

Experienced pulpmill operators may advance to pulping control operator positions but further advancement opportunities are limited without additional training.

In Alberta, over 75 per cent of people employed as pulp mill machine operators work in the **Other Manufacturing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Other Manufacturing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 400 Albertans are employed in the Pulp Mill Machine Operators occupational group which is expected to grow up to 0.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Although the outlook for the pulp and paper industry is generally favourable, the continuing computerization of pulpmill operations is expected to have a negative impact on employment demand for pulpmill operators.

Salary

In Alberta, pulpmill operators earn from **$42,000 to $78,000 a year (2005 estimate)**.

Purchasing Agent

Produced MAY 2003

Purchasing agents buy goods, materials, supplies and services and ensure that they are of the quantity, quality, price and availability required by their organization.

NOC Number(s): 1225
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M D s**

Duties

Duties and responsibilities vary from one position to another but, in general, purchasing agents:

- consult with other departments in the organization to determine what goods (e.g. equipment, office supplies) and services are needed
- develop strategic purchasing programs that consolidate company spending for specific commodities
- oversee the process of issuing requests for information and proposals, and tendering contracts to ensure that the process is fair, competitive, legal and provides best value for the organization
- analyze proposals or tenders
- purchase the right quality and quantity, at the right time and price, from the best possible source
- administer contracts for the supply of goods, services and space
- trace shipments, follow up undelivered goods, and resolve problems and disputes
- arrange the payment of duty and freight charges
- prepare and administer budgets and contracts.

In smaller organizations, purchasing agents may be directly involved in purchasing and expediting the delivery of goods. Depending on the urgency and value of the required products, orders may be submitted electronically or by telephone or facsimile. Purchasing agents usually ask suppliers for quotations in writing or call for public tenders, sometimes using local newspapers or the Internet to advertise them. The basic criterion in awarding a tender is to obtain the maximum value for the money spent as well as satisfy all specifications and requests. Errors can be very costly to the organization.

In larger organizations, experienced purchasing agents may:

- supervise buyers, purchasing clerks or expediters who review schedule shipments from suppliers and ensure deliveries are made on time and according to contracts.
- develop negotiation strategies and lead teams in supplier negotiations for goods or services
- implement processes that facilitate employee access to goods and services and reduce administrative costs
- analyze commodity vendor data and forecast trends
- recommend and implement approved purchasing policies and procedures
- develop and implement supplier performance management strategies
- administer purchasing card programs.

To keep up to date so they can make informed decisions, purchasing agents:

- use the Internet and read promotional literature including catalogues and trade journals
- consult legal and risk management personnel
- network with people in other purchasing departments
- inspect samples submitted by suppliers
- attend trade shows, conventions and seminars
- write and review product specifications
- negotiate with suppliers' representatives and end users.

Working Conditions

Purchasing agents work in an office environment. Travel, meeting deadlines or taking inventory may require working longer, irregular hours.

Personal Characteristics

Purchasing agents need the following characteristics:

- good communication skills, in person and in writing
- good organizational skills
- good negotiation skills and the ability to work with many kinds of people
- the ability to analyze purchasing options and make purchasing decisions involving large sums of money
- the ability to work independently or as part of a team
- a good memory for details
- the ability to adapt to a changing environment.

They should enjoy taking a methodical approach to compiling information, being responsible for projects and the work of others, and negotiating with people.

Educational Requirements

There are a **variety of ways to become a purchasing agent.** In the past, high school graduates have started in entry level positions such as purchasing clerk, expediter or junior buyer, or working in departments where stock is processed (e.g. stores or shipping/receiving). However, most employers prefer to hire applicants who have post-secondary education in business administration/commerce, supply chain management or economics, particularly for positions that involve cost analysis, legal issues and contract administration.

A number of employers provide training on the job for newly hired purchasing agents. Computer skills and familiarity with commonly used word processing, spreadsheet and database programs, and other technology used in e-commerce and for ordering is a definite asset.

Courses in purchasing, buying and finance are offered by the Extension or Continuing Education Divisions of universities, colleges and technical institutes and are definite assets for advancement. Individuals who have a university degree or college or technical institute diploma with courses in business administration or commerce may be able to start at a higher level and advance more quickly.

Some industries prefer to hire purchasing agents who have related background knowledge. For example, a chemical company might require purchasing agents in the company to have a diploma or degree in chemistry.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Certified Professional Purchaser is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself a Certified Professional Purchaser, you must be a registered member of the Alberta Institute of the Purchasing Management Association of Canada (AIPMAC). You can be a member of the AIPMAC but do **not** have to be registered if you do not call yourself a Certified Professional Purchaser.

Employment and Advancement

(section revised JANUARY 2006)

Purchasing agents are employed by any organization where large sums of money are spent for equipment, supplies and services, including:

- federal, provincial and municipal governments
- construction and manufacturing companies
- school boards
- regional health authorities
- post-secondary institutions

- large business firms.

A typical advancement path might be from a clerical position to buyer and purchasing agent positions. With experience, purchasing agents may advance to management positions or move into related areas such as materials management, inventory management, traffic or transportation, quality control or finance.

Purchasing agents are part of the larger National Occupational Classification 1225: Purchasing Agents and Officers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Oil and Gas Extraction**
- **Wholesale Trade**
- **Public Administration**
- **Construction**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Other Manufacturing**
- **Professional and Technical Services**
- **Transportation and Warehousing**
- **Health Care and Social Assistance**
- **Wood Products Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 3,950 Albertans are employed in the Purchasing Agents and Officers occupational group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 70 to 120 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since purchasing agents form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for purchasing agents.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for purchasing agents vary greatly, depending on the size and nature of the organization, the responsibilities of the position and the agent's qualifications.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Purchasing Agents and Officers occupational group working part-time or full-time earned from **$19,100 to $129,200 a year.** The average salary was **$51,100 a year.**

Radiation Therapist

Produced DECEMBER 2004

Radiation therapists administer prescribed treatments for cancer patients that involve using ionizing radiation (e.g. x-rays, gamma rays or electrons).

NOC Number(s): 3215.3
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O M i**

Duties

Radiation damages and destroys cancer cells. Radiation treatments may be administered externally using high energy radiation machines such as linear accelerators, or internally by placing radioactive material into body cavities or tissue.

Radiation therapists work closely with medical specialists such as radiation oncologists and medical physicists. In general, radiation therapists:

- operate complex technical apparatus and treatment units
- plan the physical and technical aspects of radiation treatments
- construct patient positioning aides and individual treatment devices
- educate patients, families and significant others about treatments
- support and care for patients during each treatment session and implement appropriate follow-up care plans
- assess individual patients' reactions to treatments
- calculate actual treatment dosages delivered during each session.

Working Conditions

(section revised FEBRUARY 2005)

Working hours may vary including regular weekday hours and evening shifts. Radiation therapists lift and move patients and routinely use treatment accessories that weigh up to 10 kilograms.

Personal Characteristics

Radiation therapists need the following characteristics:

- good physical health
- a high degree of integrity
- meticulous work habits
- good communication skills
- an understanding of the special needs of cancer patients
- patience and consideration for people of all ages and backgrounds.

They should enjoy using tools and equipment to perform tasks requiring precision, following specific requirements and guidelines, compiling information and working with the public.

Educational Requirements

(section revised FEBRUARY 2005)

The **Alberta Cancer Board** offers a specialized 28 month diploma program for radiation therapists at the following institutions:

- the **Cross Cancer Institute** in Edmonton
- the **Tom Baker Cancer Centre** in Calgary.

The minimum entrance requirement for these programs is successful completion of 30 credits of university education, or equivalent, including courses in English (three credits), psychology/sociology (six credits), physics (six credits), anatomy and physiology (six credits) and statistics (three credits).

Four to six students a year are admitted to each program. Students are selected for an interview on the basis of :

- academic average
- medical experience or related work experience
- a written career investigation summary.

Other Requirements

(section revised AUGUST 2005)

Under Alberta's Health Professions Act, only registered members of the Alberta College of Medical Diagnostic and Therapeutic Technologists (ACMDTT) may call themselves a Magnetic Resonance Technologist, Nuclear Medicine Technologist, Radiographic Technologist or Radiation Therapist. Registered members provide health services listed in Schedule 12 of the Health Professions Act.

Employment and Advancement

(section revised JANUARY 2005)

In Alberta, radiation therapists are employed by the two cancer institutes listed above. In Canada, there are about 24 cancer care facilities that offer radiation therapy services.

Experienced radiation therapists may advance to senior therapist positions. With additional education and experience, they may move into management or teaching positions.

Radiation therapists are part of the larger National Occupational Classification 3215: Medical Radiation Technologists. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,850 Albertans are employed in the Medical Radiation Technologists occupational group which is expected to grow 2.7 to 3.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 70 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since radiation therapists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for radiation therapists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Medical Radiation Technologists occupational group working part-time or full-time earned from **$37,300 to $71,800 a year.** The average salary was **$57,600 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Radiological Technologist

Produced JANUARY 2005

Radiological technologists operate x-ray equipment to produce images that are used to diagnose diseases and injuries.

NOC Number(s): 3215.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O M i**

Duties

Radiological technologists produce images of body structures. These images may be displayed on x-ray film, computer monitors, film, videotape or closed circuit television systems.

In general, radiological technologists:

- explain procedures to patients and answer questions
- help patients prepare for procedures, when necessary
- monitor patients during procedures
- provide primary patient care while patients are in the diagnostic imaging department
- ensure patient comfort and safety
- interpret physicians' requests for radiological examinations
- use appropriate techniques and positioning for different pathological conditions
- correctly position patients and equipment
- operate diagnostic imaging equipment to produce quality images that assist in diagnosis
- recognize various anatomical structures radiographed
- critique images to ensure high quality results
- follow radiation protection practices, regulations and philosophy to reduce risk to patients, staff and visitors.

Radiological technologists work in conjunction with other technologists (e.g. nuclear medicine technologists, diagnostic medical sonographers, magnetic resonance technologists, combined laboratory and x-ray technologists, and respiratory therapists), physicians (particularly radiologists), nurses and clerical personnel.

Working Conditions

Most radiological technologists work in hospitals or community clinics. Those employed in hospitals may work in a variety of areas (e.g. emergency, operating room, mobile radiography, fluoroscopy, general radiography). Most work shifts and are sometimes on call. Those employed in community clinics work regular office hours but may be required to work some evenings and weekends.

This is a physically demanding occupation. Radiological technologists are on their feet for most of their shift. They may be required to help patients move, handle very heavy equipment, and lift accessory equipment weighing up to 10 kilograms. If a patient is unconscious or otherwise unable to move, technologists ask other health care workers for help moving the patient.

Radiological technologists must follow safety precautions (e.g. wear heavy lead aprons during some procedures).

Personal Characteristics

Radiological technologists need the following characteristics:

- a sense of responsibility and a high degree of integrity
- patience and adaptability
- sensitivity to the needs of ill and injured people
- the ability to put people at ease

- an interest in science and technology
- the ability to think independently and solve problems
- good organizational skills.

They should enjoy using equipment to perform tasks requiring precision, having procedures and standards for their work, and compiling information for research data and statistics.

Educational Requirements

In Alberta, the following post-secondary institutions offer 21 month diploma programs in medical radiologic technology:

- **Northern Alberta Institute of Technology (NAIT)** in Edmonton
- **Southern Alberta Institute of Technology (SAIT)** in Calgary.

NAIT and SAIT offer a joint co-operative program with participating practicum sites. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English 30, Math 30 or 31, Pure or Applied Math 30, Physics 30 and one of the following: Biology 30 (recommended), Chemistry 30 or Science 30. Basic word processing, spreadsheet, e-mail and internet program skills are also required.

The last 13 months of the program are spent at sponsoring hospitals and clinics in Alberta under the supervision of registered radiological technologists. During this period, students take distance education courses and periodically return to the institute for class days. They may be scheduled to work clinical rotations that include weekdays, statutory holidays, evenings and weekends.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised AUGUST 2005)

Under Alberta's Health Professions Act, only registered members of the Alberta College of Medical Diagnostic and Therapeutic Technologists (ACMDTT) may call themselves a Magnetic Resonance Technologist, Nuclear Medicine Technologist, Radiographic Technologist or Radiation Therapist. Registered members provide health services listed in Schedule 12 of the Health Professions Act.

Employment and Advancement

(section revised JANUARY 2006)

Radiological technologists are employed in:

- hospitals
- community clinics
- doctors' offices
- government agencies
- public health agencies
- industrial medical service units.

With experience and additional training, radiological technologists may move into:

- teaching
- information systems
- administration
- specializations (e.g. neuroradiology, cardiac radiology, computed tomography, digital subtraction angiography, bone densitometry or mammography).

Magnetic resonance imaging, ultrasonography and nuclear medicine require completion of other education programs (for more information, see the Diagnostic Medical Sonographer, Magnetic Imaging Technologist and Nuclear Medicine Technologist occupational profiles).

Radiological technologists are part of the larger National Occupational Classification 3215: Medical Radiation Technologists. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,850 Albertans are employed in the Medical Radiation Technologists occupational group which is expected to grow 2.7 to 3.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 70 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since radiological technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for radiological technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Radiological Technologists occupational group earned **up to $75,200 a year.** The average salary was **$53,100 a year.**

Railway Car Mechanic

Produced JUNE 2003

Railway car mechanics inspect, test, maintain, repair and fabricate railway passenger and freight car equipment.

NOC Number(s): 7314
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: O M I

Duties

In general, railway car mechanics:

- inspect rail cars coming into the rail yard to identify defects and determine the extent of wear and damage
- repair or replace broken, defective or worn car components such as brake parts, wheels, bearings, pistons, gears and steel parts, ladders and doors.

Railway car mechanics make minor repairs on the spot or send rail cars to the repair shop if major repairs are required.

In rail repair shops, railway car mechanics:

- perform scheduled maintenance and upgrade rail cars
- work from blueprints, shop sketches and instruction manuals to repair, fabricate and install steel or wood fittings
- repair and install parts such as air valves, bearings, air cylinders and piping
- use test gauges to test and adjust parts
- paint car exteriors and interiors.

Sometimes the cars in need of repair are not owned by the railway company that makes the repairs. When this occurs, mechanics must do the paperwork required to invoice the other railway company for repair services.

Working Conditions

Railway car mechanics are required to work on top of and under equipment, often in confined areas. They work indoors in shops and outdoors in all weather conditions. The working environment is often noisy, dusty and dirty. Lifting up to 25 kilograms is required.

In Alberta, Canadian Pacific Railway has a repair shop in Calgary and Canadian National Railway has a shop in Edmonton. Since railway yards operate 24 hours a day, seven days a week, mechanics must work shifts. Some overtime work may be required.

Personal Characteristics

Railway car mechanics need the following characteristics:

- an aptitude for mechanical work
- an aptitude for mathematics
- an interest in electrical work, welding and steel fabrication
- excellent manual dexterity
- good vision
- good hearing.

They should enjoy:

- using tools, equipment and machinery to perform tasks requiring precision
- having clear rules and organized methods for their work
- trouble-shooting problems.

Educational Requirements

Railway car mechanics must successfully complete **an internal three to four year apprenticeship program** offered by railway companies. Employers prefer to hire high school graduates who have a valid driver's licence. Applicants for railway car mechanic apprentice positions may be asked to:

- write aptitude tests that assess their ability to follow instructions and their mechanical and mathematical abilities
- take a medical examination
- pass a performance test.

Welding experience and the ability to read and create blueprint printouts and diagrams are definite assets.

Mechanic apprentices first attend classroom training programs, then rotate jobs working with different journeymen railway car mechanics, and periodically return to the classroom for training in areas such as railway welding. They are gradually given more and more responsibility.

Employment and Advancement

(section revised JANUARY 2006)

Railway car mechanics are employed by railway companies. Prospective apprentices are often recruited from among current railway employees.

Car mechanics may advance to supervisory positions and later to management positions. It is possible for car mechanics to change employers, but this occupation is unique to the rail industry and few railway car mechanics transfer their skills to other industries.

Railway car mechanics are part of the larger National Occupational Classification 7314: Railway Carmen/women. In Alberta, most people employed in this classification work in the **Transportation and Warehousing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Transportation and Warehousing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 500 Albertans are employed in the Railway Carmen/women occupational group which is expected to grow 0.8 to 1.8 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

In 2001, most Albertans in the Railway Carmen/women occupational group earned from **$24,900 to $49,000 per year** (2001 Alberta Wage and Salary Survey).

Real Estate Agent

Produced DECEMBER 2005

Real estate agents sell, lease and rent houses, apartments, commercial buildings, land and other real estate for clients on a commission basis.

NOC Number(s): 6232
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S M d**

Duties

Most real estate agents represent people who are involved in the sale or purchase of residential properties such as houses and condominiums. Experienced real estate agents may specialize in selling or leasing commercial, industrial, agricultural or other types of real estate.

Each specialty requires knowledge of the particular type of real estate and the local market for it. For example, residential real estate agents must be familiar with local zoning and building restrictions, property taxes, municipal plans for land development and financing options for buyers.

In general, real estate agents:

- view property listings to become familiar with market conditions; research properties; attend seminars, conventions and courses and read trade journals and other materials to keep informed about market conditions
- solicit property sales listings by contacting owners directly (by telephone or in person) and advertising their services
- assist sellers by establishing fair market asking prices for their properties, advertising properties, listing properties and conducting open houses
- assist buyers by showing properties and discussing terms of the sale with them
- advise clients on market conditions, prices, legal requirements and related matters
- draw up sales/rental agreements and related documents in consultation with clients
- ensure that any special terms and conditions stated in agreements are carried out before the closing dates.

Working Conditions

Working conditions for real estate agents vary. Although they generally work in offices, they spend a great deal of time outside the office showing properties to customers, meeting people, researching the market and performing related activities. Evening and weekend work is required. Most real estate agents work long hours and are virtually always on call.

Personal Characteristics

Real estate agents need the following characteristics:

- the energy and stamina required to work long hours
- maturity, tact and enthusiasm for their work
- an outgoing personality
- perseverance
- good organizational and communication skills
- good problem-solving skills
- a good memory for names, faces and business details
- the ability to imagine how a property could be used to best advantage
- personal financial management skills.

They should enjoy helping people find appropriate homes, taking a methodical approach to compiling information, and working independently in a highly competitive field.

Educational Requirements

In Alberta, real estate agents must:

- be at least 18 years of age
- have a Canadian high school diploma or equivalent
- complete a pre-licensing course
- score at least 70 per cent on a provincial qualifying exam
- obtain an employment offer from a brokerage and authorization from the **Real Estate Council of Alberta**.

Real estate brokers must:

- successfully complete the Real Estate Agent's Program or equivalent
- successfully complete the Real Estate Broker's Program offered by the **Alberta Real Estate Association**
- have at least two years of industry expereince as an agent in the past five years
- score at least 70 per cent on the provincial qualifying exam for brokers.

The required courses may be taken by distance education through the Alberta Real Estate Association or by classroom instruction. Classroom instruction is offered by real estate boards throughout the province at local post-secondary institutions, and by the **Real Estate Training Institute** in Edmonton. Applicants must have a high school diploma or equivalent education. Computer knowledge is required.

Membership in a local Real Estate Board may be required to access related services.

Other Requirements

Real Estate Agent and Real Estate Broker are protected titles under Alberta's Real Estate Act and associated regulations. This means that to call yourself a Real Estate Agent or Real Estate Broker, you must satisfy requirements set by the Real Estate Council of Alberta (RECA).

Employment and Advancement

(section revised JANUARY 2006)

Real estate agents are independent business people who work under the supervision of licensed real estate brokers. Real estate is sold everywhere in the province but most real estate offices are located in regional centres.

Real estate sales is a very competitive business. Many of the people who enter this occupation each year leave within two years.

Experienced real estate agents in large firms may advance to management positions or specialize in particular aspects of real estate such as property management.

Real estate agents are part of the larger National Occupational Classification 6232: Real Estate Agents and Salespersons. In Alberta, most people employed in this classification work in the **Finance, Insurance and Real Estate** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment in the Finance, Insurance and Real Estate industry (especially changes that affect the housing market)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 6,900 Albertans are employed in the Real Estate Agents and Salespersons occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 100 to 180 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Real estate agents are self-employed. They work on a commission basis and must pay expenses from their gross commissions. Licensed real estate brokers may provide office space, supplies and clerical support on a fee for service basis.

Earnings vary greatly from month to month and from one agent to another. Top selling agents earn most of the total earnings for all real estate agents.

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time **starting** salaries for Albertans working in the Real Estate Agents and Salespersons occupational group ranged from **$13,000 to $90,300 a year.**

OCC info Alberta Occupational Profiles

Alberta Human Resources and Employment

Real Estate Appraiser

Produced JANUARY 2006

Real estate appraisers estimate the value of vacant and improved residential, commercial, industrial, agricultural and other real estate.

NOC Number(s): 1235.3
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M d s**

Duties

A real estate appraisal may be required when a property is bought, sold, mortgaged, insured, damaged, invested in, expropriated, divided up in a court settlement or assessed for taxation.

Real estate appraisers thoroughly investigate and inspect a property before preparing a report. Conducting an appraisal may involve:

- reading blueprints and mechanical drawings
- checking building codes and zoning bylaws
- checking the legal description of the property
- looking at the type and location of nearby services such as shopping centres, schools, parks, municipal infrastructure (for example, gas lines, sewer) and other features of the neighbourhood
- recognizing good and bad construction materials and workmanship
- estimating the value of property through sales comparisons, cost of replacement and income potential
- researching public records and court documents
- considering general values of real estate in the area, taxes and special assessments
- looking at current market trends in real estate.

Real estate appraisers may specialize in residential properties, commercial or industrial properties, or agricultural or forested lands.

Working Conditions

Appraisal work is generally done during weekday office hours but evening and weekend work is often required. Self-employed appraisers set their own hours.

Some property appraisals involve a certain amount of physical activity in the inspection phase (for example, inspecting foundations). Travel may be required to view rural property, industrial sites or timberland.

Personal Characteristics

Appraisers need the following characteristics:

- good communication skills in person and in writing
- patience and flexibility to work with people from a wide range of backgrounds
- strong spatial and mathematical perception to judge the size and layout of a room
- confidence in their judgements and decisions
- honesty and integrity
- the ability to work under pressure.

They should enjoy analyzing information and taking a methodical approach to their work, making decisions and dealing with people.

Educational Requirements

The **Appraisal Institute of Canada (AIC)** offers two professional designations for real estate appraisers: Canadian Residential Appraiser (CRA) and Accredited Appraiser Canadian Institute (AACI).

- CRAs are qualified to appraise individual undeveloped residential dwelling sites and dwellings containing not more than four self-contained family housing units.
- AACIs are fully accredited to appraise a wide range of property.

To qualify for either designation, prospective appraisers must:

- meet current admission requirements (which include pre-requisites that are subject to change)
- successfully complete the Institute's education program and one or more demonstration appraisal reports
- locate a suitable mentor and meet Applied Experience Program requirements (100 days for the CRA designation; 200 days for the AACI desgination)
- successfully complete a final oral examination.

Current applicants for the AACI and CRA designations must have a degree from an accredited university (this is a designation requirement, not an admission requirement).

Athabasca University and the **University of British Columbia** offer the Appraisal Institute of Canada's education program via distance education. Graduates must complete additional coursework before applying to the University of British Columbia for credit toward the CRA or AACI designation.

In Alberta, **Lakeland College** in Vermilion offers a two year Appraisal and Assessment diploma program. The entrance requirement is a high school diploma or equivalent with at least 50 per cent in English Language Arts 30-1 (or English 30, or 65 per cent in ELA 30-2 or English 33) and 55 per cent in Pure Math 30 (or Math 30, or 65 per cent in Applied Math 30 or Math 33). Pure Math 30 is recommended. Graduates of this program may contact the University of British Columbia to gain credit towards the CRA designation.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Real estate appraisers are employed by:

- private appraisal companies
- mortgage investment firms
- banks and other lending institutions
- real estate and insurance companies
- government agencies
- municipal assessment offices.

Real estate appraisers often begin as trainees with private appraisal firms, lending institutions or government agencies. Many real estate appraisers work in private practice either alone or with a few other appraisers.

Experienced appraisers may advance to supervisory and management positions, or start their own businesses. Or they may move into mortgage lending, corporate real estate, property assessment or real estate investment analysis.

Real estate appraisers are part of the larger National Occupational Classification 1235: Assessors, Valuators and Appraisers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Finance, Insurance and Real Estate**
- **Public Administration**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including

- trends and **events** affecting overall employment (especially in the industries listed above),
- **location** in Alberta,
- **employment turnover** (work opportunities generated by people leaving existing positions),
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before), and
- **size of the occupation.**

Over 1,350 Albertans are employed in the Assessors, Valuators and Appraisers occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since real estate appraisers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for real estate appraisers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Appraisers' earnings vary considerably depending on their experience and qualifications. Self-employed appraisers charge a fee for each appraisal based on the time it takes to do the appraisal, the distance travelled and the type of report required.

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Appraisers occupational group earned **up to $136,700 a year.** The average salary was **$52,900 a year.**

© Government of Alberta, Human Resources and Employment

Receptionist

Produced OCTOBER 2005

Receptionists provide a vital link between customers or clients and an organization's staff and services.

NOC Number(s): 1414.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **S M d**

Duties

Duties vary from one position to another but, in general, receptionists:

- greet people entering offices, hospitals and other establishments, answer questions and direct visitors to the appropriate people or services
- answer, screen and forward telephone calls
- take messages and provide information
- schedule appointments
- maintain a current record of staff members' whereabouts
- accept messenger and courier deliveries
- perform other clerical duties such as word processing, compiling and recording data, maintaining files and inventories, operating office equipment, sorting mail, stuffing envelopes or proofreading.

In hospitals, medical clinics and veterinary clinics, receptionists also obtain information from patients or animal owners, direct people to the appropriate treatment areas, and keep admission records.

Working Conditions

Many receptionists work regular office hours. Evening and weekend work is required in hospitals and other establishments that are open for extended hours. Working with people and answering telephones can be hectic and stressful.

Personal Characteristics

Receptionists need the following characteristics:

- good verbal and written communication skills
- good listening skills
- a friendly, outgoing personality
- tact and the ability to stay calm during busy periods and when callers are persistent or rude
- good organizational skills
- a genuine interest in people and in helping others
- the desire and ability to work with little supervision when dealing with routine matters.

Educational Requirements

Receptionists need computer experience and knowledge of general office procedures, and exceptional telephone manners. Specific **educational requirements vary a great deal**, depending on the employer. Most employers prefer to hire job candidates who have at least a high school diploma, plus related training or experience dealing with the public.

In Alberta, many colleges, technical institutes and private vocational schools offer programs related to office administration. For a listing, see the Administrative Assistant occupational profile. The following institutions offer programs designed for reception work in general or in specific types of offices. Prospective students should investigate the suitability and reputation of training programs with employers before enrolling in a program.

- **Academy of Learning**, a private vocational school in Airdrie, Calgary, Edmonton, High River and Red Deer, offers a 44 week Medical Office Assistant program and a 51 week Medical Office Assistant with Veterinary Specialty program. The entrance requirement is a high school diploma or equivalent. The Verterinary Specialty requires Grade 10 math.
- **Alberta Career Computer Center Inc.**, a private vocational school in Edmonton, offers a 26 week Medical Office Administration program. The entrance requirement is a high school diploma with Math 10 or any Grade 11 math, or equivalent.
- **Bow Valley College** in Calgary offers a 21 week Dental Business Assistant certificate program and a 22 week Medical Office Assistant program. The entrance requirement for both programs is at least three Grade 11 subjects including English 20 or 23 or equivalent, and typing speed of 20 words per minute. The College also offers a 16 week Hospital Admitting Clerk program.
- The **CDI College of Business, Technology and Healthcare**, a private vocational school, offers a 36 week Medical Administrative Assistant program in Calgary and Edmonton and a 35 week Dental Business Administration program in Edmonton. The entrance requirement for both programs is a high school diploma or equivalent.
- **Columbia College**, a private vocational school in Calgary, offers a 16 week Dental Business Administration program and a 20 week Medical Administration/Clinical Assistant program. The entrance requirement for both programs is Grade 12 or equivalent education.
- **HCC Choice College**, a private vocational school in Spruce Grove, offers a 25-week Medical Clinical Assistant program. The entrance requirement is a high school diploma with Math 10 or any Grade 11 math or equivalent.
- **Lakeland College** offers a Veterinary Medical Receptionist program in Lloydminster and Sherwood Park. The entrance requirement is a high school diploma with at least 50 per cent in English Language Arts 30-1 (or English 30, or 65 per cent in ELA 30-2 or English 33), Pure Math 20 (or Math 20, Applied Math 30 or Math 33), and oen of the following: Biology 20, Chemistry 20, Physics 20 or Science 20.
- **Mann Career Training Ltd.**., a private vocational school in Spruce View, offers a Medical Office Receptionist correspondence program. Contact the company for more information.
- **Medical Reception College Ltd.**, a private vocational school in Calgary and Edmonton, offers a six week Medical Receptionist Training course. The entrance requirement is a high school diploma with a Grade 10 English or equivalent.
- **Network Learning Masters** in Edmonton offers a 20-week Office Professional program. The entrance requirement is an Alberta high school diploma with English 10 or equivalent.
- **NorQuest College** in Edmonton offers a 21 week Dental Business Assistant program. Entrance requirements include 60 per cent in English Language Arts 30-1 or English 30 (or 65 per cent in ELA 30-2 or English 33), a net keyboarding speed of 20 words per minute, a clear criminal record check and an admission interview.
- **Northern Alberta Institute of Technology (NAIT)** offers a one year Veterinary Administrative Assistant program and 32 week Office Admininstration certificate program at its St. Albert campus. The entrance requirement is a high school diploma with English 30 or 33 and Pure or Applied Math 20 (or Math 23), or equivalent.
- **Olds College** offers a one year Veterinary Medical Receptionist certificate program. The entrance requirement is a high school diploma with English Language Arts 30-1 (or 30-2 or English 30 or 33), Pure or Applied Math 20 (or Math 20 or 23) and Biology 20.
- **Reeves College**, a private vocational school in Edmonton and Lloydminster, offers a 33 week Medical Office Assistant program. The entrance requirement is a high school diploma with Grade 12 English and math, or equivalent.
- **Slate Training Centre**, a private vocational school in Edmonton, offers a 27 week Dental Administrative Assistant program. The entrance requirement is a high school diploma or equivalent.
- The **Southern Alberta Institute of Technology (SAIT)** offers a five month Health Information Office Assistant certificate program. The entrance requirement is a high school diploma or equivalent with 60 per cent in English Language Arts 30-1 (or ELA 30-2 or English 30 or 33) and Biology 30.
- **Trend College** in Edmonton offers a 39 week Veterinary Office Receptionist program. Contact the company for more information.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Receptionists are employed in:

- banks
- universities and colleges
- law firms
- government departments
- medical and dental offices
- hospitals
- real estate and insurance offices
- small and large businesses.

Some positions are part-time.

The introduction of automated office equipment such as computers has not changed the nature of the work (communication with people) but increasing use of voice-mail and e-mail in many offices may reduce the number of jobs in which telephone answering is a major component of the work.

Receptionists are part of the larger National Occupational Classification 1414: Receptionists and Switchboard Operators. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Health Care and Social Assistance**
- **Repair, Maintenance, Personal and Other Services**
- **Professional and Technical Services**
- **Finance, Insurance and Real Estate**
- **Retail Trade**
- **Management, Administrative and Other Support Services**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

About 10,050 Albertans are employed in the Receptionists and Switchboard Operators occupational group which is expected to grow 0.6 to 1.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 60 to 160 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since receptionists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for receptionists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries vary a great deal depending on the receptionist's qualifications and the responsibilities involved.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Receptionists and Switchboard Operators occupational group working part-time or full-time earned from **$10,600 to $64,900 a year.** The average salary was **$26,000 a year**.

Recording/Sound Engineer

Produced MAY 2003

Recording and sound engineers use a variety of techniques and electronic equipment to record, mix, process, manipulate and edit sound.

NOC Number(s): 5225
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M I

Duties

Recording engineers work in recording studios, film post-production houses, radio stations, multi-media companies and on film sets. Most sound recordings are made on multi-track tape recorders (4, 8, 16 or 24 track machines), digital audio work stations or hard disc based computers/samplers.

In general, recording engineers:

- operate recording consoles or computers, tape machines, microphones and sound processing equipment to change the signals from microphone or line inputs to usable audio signals that can be sent to multi-track recording machines or digital audio processors.
- mix, combine or edit recordings to create master tapes for commercials, film soundtracks, CDs, computer audio files (wave files) or multi-media presentations for later broadcast or retail sale.
- do audio post-production mixing and editing for film/video work.
- create MIDI (musical instrument digital interface) programs for music projects, commercials or film post-production.

Recording engineers record separate instruments, vocals and sounds, and combine them later during the mixing or post-production stage. They work closely with producers, directors, arrangers, programmers and performers to achieve the desired sound for musical recordings, commercials and film, television, theatre and radio productions.

Sound (live) engineers mix the sound produced during live performances to produce:

- the sound that audiences hear coming through the main speakers
- what performers hear through earphones or monitors facing the performers (their own voice or instruments, whichever they prefer).

Sound engineers work at a mixing console and are often responsible for setting up and tearing down the entire sound system.

The work that recording engineers and live sound engineers do is based on the same principles and there is some cross-over between the two occupations. However, studios are accoustically stable environments. The venues for live performances are more challenging.

Analog recording is still used in recording studios, radio stations and some post-production studios, but most recordings use SMPTE (Society of Motion Picture and Television Engineers) or MIDI time code for synchronization. Recording is increasingly becoming computerized. Computers allow recording and sound engineers to work in a non-destructive format, work faster and more efficiently, and collaborate with others in locations throughout the world.

Working Conditions

Recording and sound engineers may be required to work long hours in a studio or on a film set to meet project deadlines. Sound engineers often spend a lot of time travelling.

Personal Characteristics

Recording and sound engineers need the following characteristics:

- patience, understanding and flexibility
- the ability to think logically and pay attention to details
- the stamina required to work long hours
- a good ear for musical pitch and tone
- good communication skills to clarify what sounds are desired, make suggestions and accept criticism
- the ability to deal with a variety of personal musical styles and to work as part of a team
- quick thinking and decision-making abilities to solve problems as they arise.

They should enjoy using electronic equipment to perform tasks requiring precision and trouble-shooting problems.

Educational Requirements

Although a related post-secondary certificate or diploma is an asset when seeking employment, there are **no formal education requirements** for recording and sound engineers. Most recording and sound engineers have acquired a working knowledge of today's computer-based recording technologies (e.g. digital mixing, random access editing) and the ability to adapt quickly to many different recording formats and devices by **learning on the job or taking related courses**. Sound engineers in particular must be very versatile and able to work in many different circumstances.

An understanding of music theory and harmony is an asset for those who work on music projects. For information about post-secondary music programs in Alberta, see the Instrumental Musician occupational profile.

For information about post-secondary programs related to broadcasting, see the Television Audio/Video Operator profile.

Training to become a recording/sound engineer is very specialized and a relative few private vocational schools in Canada offer it. Occasionally, colleges, technical institutes and electronic music stores offer evening courses or short seminars in sound recording. Aspiring recording and sound engineers should discuss their career plans with people and employers in the industry before enrolling in a training program.

Employment and Advancement

(section revised JANUARY 2006)

It can be difficult to break into the recording engineering business. Experience working on a practicum placement through a school training program or as a volunteer at a cable television station is an asset. Beginning in radio commercial production is another option.

It is common in the industry for someone to start out as a "gopher" or assistant engineer, and work their way up. You must be willing to work for little money to gain practical experience and establish a reputation for good work.

Recording and sound engineers work for:

- live sound re-enforcement companies
- video and film production companies
- multi-media companies
- television and radio stations
- clubs
- bands
- theatre and dance companies
- recording studios.

Some freelance recording engineers set up their own basement or project recording studios.

Experienced studio recording engineers may advance to producer positions.

Recording/sound engineers are part of the larger National Occupational Classification 5225: Audio and Video Recording Technicians. In Alberta, over 75 per cent of people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)

- **size of the occupation.**

Over 850 Albertans are employed in the Audio and Video Recording Technicians occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since recording/sound engineers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for recording/sound engineers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Audio and Video Recording Technicians occupational group working part-time or full-time earned from **$21,500 to $58,600 a year.** The average salary was **$39,200 a year.**

Recreation and Sport Administrator

Produced MARCH 2005

Recreation and sport administrators plan, organize and direct sport and recreation programs and services in accordance with policies set by management, owners, boards of directors or executive committees.

NOC Number(s): 0513
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D M I**

Duties

In general, recreation and sport administrators:

- develop and recommend overall recreation strategies, plans and policies
- implement policies
- act as a liaison for boards, committees and community organizations
- organize and co-ordinate recreation programs and educational events
- plan regional, provincial, national and international sporting events
- assist community organizations in planning and administration, and facilitate the delivery of their programs and services
- initiate and oversee fund raising activities
- manage or oversee recreational and sport facilities such as arenas, curling rinks, swimming pools and golf courses
- establish yearly budgets for equipment, staffing and facility maintenance and repair
- advertise programs and services
- train and supervise staff
- write reports
- co-ordinate volunteer groups.

Working Conditions

Recreation and sport administrators meet and work with many people including municipality representatives and people who use recreation facilities. They perform administrative tasks in an office environment but meetings, recreation and sport activities may take them to a variety of locations. Some travel and evening or weekend work may be required.

Personal Characteristics

Recreation and sport administrators need the following characteristics:

- an interest in recreation and sports, and in working with people from diverse backgrounds
- excellent interpersonal skills
- good written and oral communication skills
- strong planning, organization and leadership skills
- the ability to be creative and adapt to change.

They should enjoy co-ordinating information and the work of others, negotiating business contracts and administering programs, and solving problems.

Educational Requirements

Most recreation and sport administrators have **a university degree in a related discipline** such as recreation, physical education or management. Students are strongly advised to become involved as recreation leaders during their post-secondary training. A broad range of experience in a number of different recreation programs is recommended.

In Alberta, the following institutions offer degree programs related to recreation and sport administration:

- **Mount Royal College** in Calgary offers a four year applied degree in Ecotourism and Outdoor Leadership. The entrance requirement is a high school diploma with an average of at least 60 per cent in English Language Arts 30-1 and Biology 30 (Social Studies 30 recommended).
- The **University of Alberta** in offers Bachelor of Physical Education programs in Edmonton and Camrose, and a four year Bachelor of Arts program in recreation, sport and tourism in Edmonton. The entrance requirement is an average of 65 to 80 per cent in English 30, at least one 30-level science (Biology 30 recommended) and three other approved high school subjects in specified categories (Social Studies 30 recommended).
- The **University of Lethbridge** offers four year and five year combined degree programs in physical education. The entrance requirement is an average of at least 65 per cent in English 30 and three other appropriate 30 level subjects, plus a fifth Grade 12 subject. Chemistry 30, Biology 30 and Pure Math 30 may be required for B.Sc. degree programs.

Post-secondary institutions throughout Alberta offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Recreation and sport administrators are employed by:

- provincial sports and recreation associations
- municipal, provincial and federal governments
- non-profit organizations such as the YMCA, YWCA, and Boys and Girls Clubs
- post-secondary institutions
- hospitals and extended care centres
- private clubs
- tourism and entertainment businesses and organizations.

Employment in smaller communities offers a chance to work with minimal supervision; however, budgets are smaller and opportunities for advancement may be limited. Larger cities usually have greater diversity and offer a broader range of experience.

Recreation and sport administrators are part of the larger National Occupational Classification 0513: Recreation and Sports Program and Service Directors. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 650 Albertans are employed in the Recreation and Sports Program and Service Directors occupational group which is expected to grow 1.1 to 2.1 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since recreation and sport administrators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for recreation and sport administrators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salary ranges vary greatly depending on the employer (government, non-profit organization or private organization) and type of location (smaller centre, major city).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Recreation and Sport Program and Service Directors occupational group working part-time or full-time earned from **$12,100 to $108,800 a year.** The average salary was **$50,300 a year.**

© Government of Alberta, Human Resources and Employment

Recreation Co-ordinator/Supervisor

Produced MARCH 2005

Recreation co-ordinators administer and oversee recreation programs and leisure services.

NOC Number(s): 4167.5
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: S D I

Duties

Recreation co-ordinators plan, organize, supervise and evaluate recreation programs, and advise groups and organizations regarding recreational programming. They are involved in many aspects of recreation including:

- leadership training
- sporting, cultural and physical fitness activities
- outdoor recreation
- parks management
- recreation for special populations.

In general, recreation co-ordinators:

- plan and implement programs and services based on community needs
- work with community organizations in program development and implementation
- advertise programs
- implement fund-raising projects
- conduct research and program evaluations
- prepare budgets for departments, facilities or individual programs
- prepare grant applications, write reports and develop long range plans
- interview, hire, supervise and train staff and volunteers who operate various courses, programs and facilities.

Working Conditions

Recreation co-ordinators generally work in an office environment but may be required to work some evenings and weekends to attend meetings and events. Travel also may be required especially if co-ordinators are responsible for programs in two or three locations.

Setting up recreational activities sometimes requires lifting up to 25 kilograms.

Personal Characteristics

Recreation co-ordinators need the following characteristics:

- good oral and written communication skills
- the ability to establish rapport with people of all ages and backgrounds
- strong organizational and leadership skills.

They should enjoy consulting with people, directing and co-ordinating programs, and developing innovative programs.

Educational Requirements

(section revised JULY 2005)

Recreation co-ordinators and supervisors must have **a university degree or college diploma** in a related discipline such as recreation, physical education or management. Most employers prefer to hire university graduates whose studies were directly related to recreation or who have experience in the recreation field. Some positions require an understanding of community development principles and the ability to organize community-wide festivals and special events.

In Alberta, the following institutions offer related diploma and degree programs:

- **Grande Prairie Regional College** offers a two year diploma in Fitness Leadership. The entrance requirement is an average of at least 60 per cent in English Language Arts 30-1, two humanities or science subjects, one science and one other 30 level subject (not more than one language other than English).
- **Lethbridge Community College** offers a two year Therapeutic Recreation - Gerontology diploma program. The entrance requirement is a high school diploma with at least 65 per cent in English 30 or 33, and Biology 30.
- **Mount Royal College** in Calgary offers a four year applied degree in Ecotourism and Outdoor Leadership. The entrance requirement is a high school diploma with an average of at least 60 per cent in English Language Arts 30-1 and Biology 30 (Social Studies 30 recommended).
- The **Northern Alberta Institute of Technology** in Edmonton offers a two year Personal Fitness Trainer diploma program. The entrance requirement is a high school diploma with English 30 or 33, a 30 level science (Biology 30 recommended) and Pure or Applied Math 20.
- The **University of Alberta** in offers Bachelor of Physical Education programs in Edmonton and Camrose, and a four year Bachelor of Arts program in recreation, sport and tourism in Edmonton. The entrance requirement is an average of 65 to 80 per cent in English 30, at least one 30-level science (Biology 30 recommended) and three other approved high school subjects in specified categories (Social Studies 30 recommended).
- The **University of Lethbridge** offers four year and five year combined degree programs in physical education. The entrance requirement is an average of at least 65 per cent in English 30 and three other appropriate 30 level subjects, plus a fifth Grade 12 subject. Chemistry 30, Biology 30 and Pure Math 30 may be required for B.Sc. degree programs.

Post-secondary institutions throughout Alberta offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Recreation co-ordinators are employed by:

- municipal governments
- private recreation and fitness facilities
- tourism and entertainment businesses and organizations
- health care institutions
- post-secondary education institutions
- non-profit sport and recreation associations (e.g. YMCA, YWCA, Boys and Girls Clubs).

Employment in smaller centres may offer a broader range of experience. Larger centres usually have greater program diversity and offer opportunities for specialization.

Experienced co-ordinators may move into consulting positions or administrative positions (for more information, see the Recreation and Sport Administrator occupational profile).

Recreation co-ordinator/supervisors are part of the National Occupational Classification (NOC) 4167: Recreation, Sports and Fitness Program Supervisors and Consultants. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Health Care and Social Assistance**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,300 Albertans are employed in the Recreation, Sports and Fitness Program Supervisors and Consultants occupational group which is expected to grow 2.0 to 3.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since recreation co-ordinator/supervisors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for recreation co-ordinator/supervisors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for recreation co-ordinators vary depending on location, the responsibilities of the position and the co-ordinator's qualifications.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Recreation, Sports and Fitness Program Supervisors and Consultants occupational group working part-time or full-time earned from **$13,700 to $51,500 a year.** The average salary was **$37,100 a year.**

Recreation Facility Operator

Produced MARCH 2005

Recreation facility operators maintain and supervise the use of recreational facilities ranging from ice arenas and swimming pools to sports fields and tennis courts.

NOC Number(s): 6671.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O S**

Duties

Recreation facility operators are responsible for the smooth, safe and efficient operation of recreation facilities such as swimming pools, arenas, curling rinks, indoor courts and outdoor facilities. They are sometimes responsible for programming as well as facility operation and maintenance (for more information, see the Recreation Co-ordinator/Supervisor profile).

Recreation facility operators' duties depend on the type and number of facilities they operate, and their degree of involvement with programming and maintenance. For example, a swimming pool operator may:

- run swimming lesson programs
- be responsible for public relations and planning
- oversee pool administration
- supervise lifeguards
- prepare budgets
- handle cash
- maintain water quality and mechanical operations
- have building maintenance and custodial duties.

In the same community, an ice rink operator may only supervise the rink during hours of operation and maintain the ice surface.

In general, recreation facility operators:

- perform routine maintenance themselves or supervise general maintenance staff and, when required, tradespeople such as painters, plumbers and electricians
- enforce safety regulations
- ensure good public relations
- schedule the use of facilities and collect fees.

In large complexes that may include ice rinks, swimming pools or other facilities, facility operators must ensure the efficient, safe operation of:

- building systems (boilers, plumbing, heating and ventilation systems)
- architectural and structural components (door hardware, paint finishes, floor finishes, furniture, windows, roofing systems, etc.)
- life, fire and safety systems (fire panels, fire extinguishers, concession range hood systems, wet and dry sprinkler systems, first aid stations, etc.)

Working Conditions

Recreation facility operators may work both indoors and outdoors depending on the type of facility. They often work shifts that include evenings, weekends and holidays.

Some recreation facility operators are required to lift materials and equipment weighing up to 25 kilograms.

Personal Characteristics

Recreation facility operators need the following characteristics:

- flexibility and a sense of humour
- a willingness to acquire a broad range of skills
- the ability to work effectively in a team environment
- the ability to work effectively with patrons and clients.

They should enjoy working with people and machines, and having responsibilities that change frequently.

Educational Requirements

In the past, many facility operators have worked their way up but this is becoming increasingly difficult as more specialized skills, training and education are required.

- **Indoor ice arena operators** need to know how to make and maintain artificial ice to a safe and efficient standard, make minor repairs to ventilation and refrigeration systems, and do cutodial work. A minimum Level I Arena Operator's certificate from the Alberta Association of Recreation Facility Personnel is recommended. An AARFP Level II or building maintenance certificate may be required.
- **Swimming pool operators** must know how to operate low pressure boilers and filtration systems, maintain the water and facilities at a level that satisfies health regulations, understand chlorine safety and water testing, and clean facilities. A minimum Level I Swimming Pool Operator's certificate is recommended.
- **Outdoor facility operators** responsible for sports fields, tennis courts, playgrounds and parks have to know about the maintenance of sports fields, playgrounds and courts, irrigation systems, plants and equipment.

The **Alberta Association of Recreation Facility Personnel (AARFP)** offers short courses related to the operation and maintenance of swimming pools, arenas, buildings, parks and sportfields. These courses can be taken in various locations throughout the province. Individuals receive Level I or Level II certification.

Employment and Advancement

(section revised JANUARY 2006)

Most municipalities in Alberta employ facility operations personnel. Some positions (e.g. arena operator, parks operator) are seasonal.

Advancement opportunities depend on the nature of the employing organization and the qualifications of the facility operator.

Recreation facility operators are part of the larger National Occupational Classification 6671: Operators and Attendants in Amusement, Recreation and Sport. In Alberta, most people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,900 Albertans are employed in the Operators and Attendants in Amusement, Recreation and Sport occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 80 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since recreation facility operators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for recreation facility operators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Operators and Attendants in Amusement, Recreation and Sport occupational group working part-time or full-time earned from **$9,100 to $46,100 a year.** The average salary was **$18,400 a year.**

© Government of Alberta, Human Resources and Employment

Recreation Therapist

Produced FEBRUARY 2005

Recreation therapists encourage and promote independent leisure lifestyles for people who have special needs.

NOC Number(s): 3144
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: S I M

Duties

Recreation therapists help individuals who have physical, mental, emotional or social limitations to make healthy lifestyle choices and get involved in health-promoting, rewarding leisure activities (e.g. sports, games, arts and crafts, gardening, exercising, dancing, nature study, special events). Appropriate activities assist in the healing process, living well and maintaining health.

Recreation therapy programs are designed to:

- help clients remove barriers that prevent them from participating in meaningful leisure activities
- foster positive attitudes and self-confidence
- help clients acquire new skills
- encourage clients to remain involved in leisure pursuits despite their special needs or circumstances.

Some recreation therapists work as part of health care teams which may include doctors, nurses, nutritionists, psychologists, occupational therapists, physical therapists and other professionals.

In general, recreation therapists:

- assess clients' skills, needs, interests and values relevant to recreation and leisure activity
- adapt activities to clients' special needs, abilities and circumstances
- ensure a safe place and appropriate transportation, equipment and materials for participation in activities
- encourage clients to make decisions about pursuing leisure activities and set personal goals for participation
- chart the progress or difficulties of each client and report to the treatment team
- teach clients about the physical, mental, social and emotional benefits of participating in recreational activities
- work with clients to identify personal leisure barriers and design interventions to address these barriers
- attend rehabilitation team meetings and professional development events.

Working Conditions

This work may involve fairly strenuous physical activity and can be stressful when clients take a long time to choose to participate in leisure activities. Willingness to participate in leisure activities is often influenced by a client's physical, emotional and mental health. However, recreation therapy is crucial to individual rehabilitation and can be very rewarding.

Personal Characteristics

Recreation therapists need the following characteristics:

- excellent interpersonal communication skills
- enthusiasm and a positive, flexible attitude
- organizational skills for planning and co-ordinating events
- the ability to work independently and as part of a team.

They should enjoy working with people, developing and implementing innovative programs, and using specially designed equipment and techniques.

Educational Requirements

(section revised APRIL 2005)

The minimum education requirement is **a degree or diploma in recreation with a specialization in therapeutic recreation**. In Alberta, the following post-secondary institutions offer related programs:

- **Lethbridge Community College** offers a two year diploma program in Therapeutic Recreation (Gerontology). The entrance requirement is a high school diploma with an average of at least 65 per cent in English 30 or 33, or equivalent, and at 50 per cent in Biology 30.
- The **University of Alberta** in Edmonton offers a four year Bachelor of Arts (BA) degree in Recreation, Sport and Tourism with a specialization in recreation/leisure for special populations. The entrance requirement is at least 60 per cent in English 30 and four other approved 30 level subjects (Biology 30 and Social Studies 30 are recommended). Admission is competitive so a high average is often required to gain admission.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Recreation therapists are employed in a variety of settings:

- hospitals, continuing care and residential care facilities
- prisons and correctional centres
- private and government recreation centres
- community programs
- mental health centres
- group homes
- private community-based agencies.

Advancement opportunities vary depending on the organization and the therapist's academic qualifications.

Recreation therapists are part of the larger National Occupational Classification 3144: Other Professional Occupations in Therapy and Assessment. In Alberta, over 75 per cent of people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 750 Albertans are employed in the Other Professional Occupations in Therapy and Assessment occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since recreation therapists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for recreation therapists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Professional Occupations in Therapy and Assessment occupational group working part-time or full-time earned from **$21,400 to $78,500 a year.** The average salary was **$38,700 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Recreation Vehicle Service Technician

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Recreation vehicle service technicians install, repair and maintain interior and exterior components on motor homes, travel trailers, fifth wheel trailers, truck campers, tent trailers and van conversions.

NOC Number(s): 7383.3
Minimum Education: Apprenticeship Trade - Grade 10
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O I M**

Duties

Duties vary from one position to another but, in general, recreation vehicle service technicians:

- install accessories
- perform pre-delivery inspections
- write repair estimates and read and write the repair order
- troubleshoot, repair and maintain propane gas and electric appliances such as furnaces, refrigerators, water heaters, ranges and air conditioners
- repair fibreglass, body and structural components
- install, repair, replace and maintain roofs, siding, windows, doors vents, awnings, floor coverings, cabinets, counters, plumbing systems, electrical systems, propane gas systems, batteries and charging systems.

Eventhough technicians do not repair engines or drive train components of motorized vehicles, they may install trailer and fifth wheel hitches, wire tow vehicles and perform maintenance and repairs on trailer frames, undercarriage and suspension.

In general, recreation vehicle service technicians:

- examine, troubleshoot and diagnose units in need of repair or maintenance
- use testing equipment, troubleshoot techniques, manufacturers' specifications and Internet websites to assist at locating faults and performing repairs
- use manuals, catalogues and Internet websites to order repair parts and components
- use computerized and electronic devices for testing components
- communicate with supervisors, manufacturers and consumers to ensure timely, efficient and economical repairs
- dismantle faulty assemblies, repair or replace worn and damaged parts.

Working Conditions

Recreation vehicle service technicians usually work at indoor shops and occasionally work outdoors and at RV sites. Most work a 40-hour, five-day week. However, some evening, weekend or holiday work may be required, particularly during the busier summer months.

Recreation vehicle service technicians may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Recreation vehicle service technicians need the following characteristics:

- good communication, organizational and learning skills
- good manual dexterity and balance while working off the ground
- mechanical, electrical and electronics aptitude
- good trouble-shooting and problem-solving capabilities
- the ability to work either independently or as a team member
- the ability to keep up to date with changing technology.

They should enjoy being challenged by a broad-based, diverse variety of different tasks that are rarely repetitious in nature. They also need pride in workmanship and the desire to attain a superior level of expertise.

Educational Requirements

To work in Alberta, recreation vehicle service technicians must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 10 education with Math 10 or 13, Pure Math 10 or Applied Math 10 and English 10 or 13 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Background knowledge in electricity, gas fitting, carpentry, plumbing, mechanics and sheet metal are an asset.

The **term of apprenticeship** is three years (three 12-month periods) that include a minimum of 1,600 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Recreation vehicle service technician apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at the Southern Alberta Institute of Technology (SAIT) in Calgary.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Recreation vehicle service technicians are employed by recreation vehicle dealerships, manufacturers and independent repair shops.

Experienced recreation vehicle service technicians may advance to a number of supervisory or administrative positions, specialize in a particular area of repair, or open their own shops. Alberta certified journeyman recreation vehicle service technicians who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Recreational vehicle service technicians are part of the larger National Occupational Classification 7383: Other Trades and Related Occupations. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Wood Products Manufacturing**
- **Repair, Maintenance, Personal and Other Services**
- **Agriculture**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (see working conditions)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,100 Albertans are employed in the Other Trades and Related Occupations group, which is expected to grow 0.3 to 1.3 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since recreational vehicle service technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for recreational vehicle service technicians.)

However, this trade has witnessed a steady growth and a high demand for qualified recreation vehicle service technicians.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice recreation vehicle service technicians earn at least 55 per cent of the journeyman wage rate in their place of employment in the first year, 65 per cent in the second and 75 per cent in the third. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$18 to $25 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Recreational Vehicle Technicians occupational group earned **up to $48,600 a year**. Those with three years of experience earned from **$27,400 to $44,600 a year.** The average salary was **$37,800 a year**.

© Government of Alberta, Human Resources and Employment

Refinery/Upgrader Process Operator

Produced AUGUST 2005

Refinery/upgrader process operators are responsible for the day to day operations of oil refineries and upgraders.

NOC Number(s): 9232
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O I d**

Duties

Oil or oilsand (bitumen) that comes directly out of the ground must go through a number of processes in the field and at the refinery before it can be used to meet energy and raw material manufacturing needs. In the field, raw oil (or oilsand) is treated to prepare it for movement down major pipelines. At upgraders, it is treated to the point that it can be used by a refinery. At refineries, it goes through a number of additional distillation processes (e.g. cracking, blending, reforming) which separates it into useable products such as gasoline, kerosene, diesel fuel, light and heavy fuel oils, jet fuel, greases, lubricating oil, waxes and asphalt.

Refinery/upgrader process operators' job titles and duties vary from one refinery/upgrader to another. There are often different categories of process operators and different refineries/upgraders have various combinations of categories. Operators may be known by the process in which they are involved (e.g. treater, blender, bitumen extractor or upgrader operator) or by the unit in which they work (e.g. catalytic cracking unit operator or pumping unit operator). Their duties depend on the unit in which they work, the area of the unit, the refinery's level of automation and the company for which they work.

In general, however, refinery/upgrader process operators:

- conduct ongoing routine checks and tasks
- prepare equipment for maintenance work
- respond to problems and emergency situations as they arise
- record readings (manually or on computer)
- make adjustments on equipment and note possible problems
- take samples of oil, gas or water
- conduct basic chemical tests
- ensure safe operations
- perform general housekeeping duties such as wiping up oil spills and sweeping floors.

Some refinery/upgrader process operators are **control room operators** who co-ordinate shut-downs and major projects. When working in the control room, operators:

- monitor process indicators
- ensure safety and environmental regulations are being followed
- monitor alarms which provide information about the operation of each unit in their section
- make necessary changes and adjustments such as adjusting flows, temperatures, pressures or levels to ensure safe and efficient plant operation.

Control room operators work with special types of technical equipment. In refineries/upgraders that are highly automated, they use a plant computer control system.

Working Conditions

Since refineries/upgraders operate 24 hours a day, year round, refinery/upgrader operators usually work eight or 12 hour shifts. Process operators spend about half of their time working in the control room and the other half outdoors.

Routine checks are carried out at all hours regardless of weather conditions. Lifting items weighing up to 25 kilograms is routinely required. Where refinery/upgrader units are spread over a wide area, operators do a lot of walking.

Personal Characteristics

Refinery/upgrader process operators need the following characteristics:

- the ability to work changing shifts and remain alert
- the ability to think and learn quickly
- an interest in working with massive systems and complex machines
- agility and the ability to lift 25 kilograms to shoulder height
- problem solving and decision making skills
- the ability to work with others in a team environment
- the ability to give clear directions in emergency situations.

They should enjoy controlling equipment, instruments and machinery; analyzing information to solve problems and working with others in a team.

Educational Requirements

The minimum education requirement for refinery/upgrader process operators is a high school diploma plus training in power engineering or process operations. For some positions, employers prefer to hire applicants who have a two year diploma in chemical or petroleum engineering technology. Course work or practical experience with machines or electrical equipment is an asset.

Before enrolling in an education program, prospective process operators should contact potential employers to discuss hiring practices and preferences.

For information about power engineering programs, see the Power Engineer occupational profile. The following Alberta post-secondary institutions offer programs related to process operations:

- **Lakeland College** in Lloydminster offers a one year Heavy Oil Operations Technician certificate program. The entrance requirement is a high school diploma with English Language Arts 30-1 or English 30 (or 65 per cent in ELA 30-2 or English 33), Pure Math 30 or Math 30 (or 65 per cent in Applied Math 30 or Math 33), and Physics 20 or Chemistry 20 (or 65 per cent in Science 20).
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers two year Chemical Engineering Technology and Petroleum Engineering Technology diploma programs. The entrance requirement for both programs is a high school diploma or equivalent with English 30 or 33, Pure Math 30 or Math 30 (or 60 per cent in Math 33), and one of the following: Science 30, Chemistry 30 or Physics 30.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers two year Chemical Engineering Technology and Petroleum Engineering Technology diploma programs. Entrance requirements for both programs include a high school diploma with Grade 12 English, Pure Math 30 or Math 30, Chemistry 30 and either Science 30 or Physics 20. Applicants for Petroleum Engineering Technology must have at least 60 per cent in Pure Math 30 or Math 30. SAIT also offers a two year after-diploma Bachelor of Applied Petroleum Engineering Technology degree program and a one year Process Operations certificate program that includes a four-week practicum. The entrance requirement for the certificate program is 70 Alberta high school credits (Grade 11) including English 20 or 23, or equivalent.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

New employees usually take in-house training courses and learn on the job by working with other operators.

Experienced process operators may advance to supervisory positions or move into related positions in:

- pulp mills
- water treatment plants
- petrochemical plants
- food and beverage plants
- hospitals
- fertilizer plants
- power generation facilities.

Refinery/upgrader process operators are part of the larger National Occupational Classification 9232: Petroleum, Gas and Chemical Process Operators. In Alberta, over 75 per cent of people employed in this classification work in the **Oil and Gas Extraction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Oil and Gas Extraction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 7,000 Albertans are employed in the Petroleum, Gas and Chemical Process Operators occupational group, which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 150 to 230 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since refinery/upgrader process operators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for refinery/upgrader process operators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Petroleum, Gas and Chemical Process Operators occupational group working part-time or full-time earned from **$35,400 to $115,000 a year** (salary ranges for refinery/upgrader operators are generally at the lower end of this overall range). The average salary was **$77,900 a year.**

© Government of Alberta, Human Resources and Employment

Reflexologist

Produced NOVEMBER 2004

Reflexologists apply varying degrees of finger pressure to specific points and areas on clients' bodies, usually their feet or hands, to improve health and well-being.

NOC Number(s): 3232.6
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S I M**

Duties

Reflexology is based on the idea that stimulating reflexes in the feet, hands, ears, face and scalp affects the functioning of other parts of the body. The reflexologist's goal is to help the body achieve optimum health by removing blockages to normal body function and self-healing.

Each reflexology session with a client usually takes about an hour. During these sessions, reflexologists:

- ask questions about the client's medical history, physical condition, lifestyle and preferences
- assess their physical, mental and emotional health
- use gentle compression techniques with thumbs and fingers to stimulate specific reflex points or areas
- identify and record reflex sensitivities.

Working Conditions

Reflexologists usually work in wellness centres. Some work from their homes or travel to clients' homes. Their hours of work vary considerably but generally include evenings and weekends.

Personal Characteristics

Reflexologists need the following characteristics:

- an interest in working with people on a one-to-one basis
- willingness to make direct physical contact with clients
- a genuine interest in clients' well-being
- good health and stamina
- strong hands
- the ability to communicate and establish rapport with others.

They should enjoy working with people and analyzing information to determine appropriate techniques.

Educational Requirements

The practice of reflexology is not regulated in Alberta. Reflexology skills and general knowledge of anatomy and body systems are desirable but there are **no legislated minimum education or training requirements.**

Personal interest and certification-level courses in Reflexology are offered by a variety of agencies (private vocational schools, school boards, the continuing education departments of post-secondary institutions) when there is sufficient demand to warrant offering a course. Courses are advertised in continuing education brochures and newspapers.

Mount Royal College in Calgary offers a four course Reflexology Therapy certificate program through Continuing Education that takes nine months to complete on a part-time basis. Applicants must have a high school diploma or equivalent. Biology 30 is recommended. For current information about mature student admisssion policies, please check the College's calendar or website.

For information about Massage Therapy programs that may include reflexology courses, see the Massage Therapist occupational profile.

Before enrolling in a reflexology course or program, prospective reflexologists should discuss their training options with several practicing reflexologists who are working in different types of environments.

Other Requirements

Depending on where they live in the province, self-employed reflexologists may be required to have a municipal business license or annual police security clearance.

Reflexologists must be registered with a recognized professional association for their clients to be reimbursed for the cost of reflexology services through extended health care benefits plans.

Employment and Advancement

(section revised JANUARY 2006)

Most reflexologists are self-employed. They may work in private homes or in settings such as chiropractic offices, physiotherapy clinics or aesthetic salons. Many reflexologists work part-time or also offer related services (e.g. reiki, iridology) as well.

Advancement in this occupation generally takes the form of building a larger client base.

Reflexologists are part of the larger National Occupational Classification 3232: Midwives and Practitioners of Natural Healing. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 500 Albertans are employed in the Midwives and Practitioners of Natural Healing occupational group which is expected to grow 1.4 to 2.4 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since reflexologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for reflexologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Reflexologists' treatment fees range from **$30 to $60 per hour (2004 estimate).** The amount reflexologists earn in any given period depends on the number of hours they work and their overhead costs (e.g. the cost of renting space in a clinic or salon).

Refrigeration and Air Conditioning Mechanic

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Refrigeration and air conditioning mechanics install, maintain, repair and overhaul industrial, commercial and residential refrigeration and air conditioning systems and their component parts.

NOC Number(s): 7313
Minimum Education: Apprenticeship Trade - Grade 12
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M I**

Duties

At installation sites, refrigeration and air conditioning mechanics:

- work from blueprints or verbal instructions to mount or place system components
- assemble and install refrigeration or air conditioning components such as compressors, condensers, evaporators and metering devices
- install and calibrate related controls (including wiring)
- start up systems, test lines to detect leaks and record the readings taken to ensure that the system is functioning satisfactorily.

Maintenance work involves:

- checking all parts of a system
- oiling moving parts
- keeping units filled with refrigerant and adjusting valves.

When there is a malfunction, refrigeration and air conditioning mechanics diagnose the problem and fix the unit by replacing or repairing controls, electric wiring or other parts.

Mechanics also repair heating equipment, troubleshoot gas-fired equipment and calibrate gas-related controls.

Working Conditions

The working environment varies greatly from one job to another. Refrigeration and air conditioning mechanics may work anywhere from compressor rooms and roof tops to clean, comfortable computer rooms. They normally work a 40-hour week year-round. There is some risk of injury when working with electricity, gases under high pressure and hazardous gases.

Refrigeration and air conditioning mechanics may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Refrigeration and air conditioning mechanics need the following characteristics:

- mechanical ability
- good co-ordination and manual dexterity
- physical strength and stamina
- the ability to work well with co-workers
- good customer service skills
- the ability to keep up to date with changing technology.

They should enjoy solving problems and working with little supervision.

Educational Requirements

To work in Alberta, refrigeration and air conditioning mechanics must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have an Alberta high school diploma with Math 20 or 23, Pure Math 20 or Applied Math 20 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire post-secondary graduates of technical programs or high school graduates who have good marks and an aptitude for science and mechanics, or journeymen in other trades.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Refrigeration and air conditioning mechanic apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at the Southern Alberta Institute of Technology (SAIT) in Calgary.

Outside the apprenticeship program, the **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a one year Heating Ventilation and Air Conditioning (HVAC) Specialist certificate program and a one year Building Environmental Systems Technology (BEST) diploma program. The entrance requirement for HVAC program is Grade 11 or equivalent with at least 60 per cent in English 20 or 23, Math 20 or 23 and one of Science 20, Physics 20 and Chemistry 20. The entrance requirement for the BEST program is successful completion of the HVAC Specialist program or equivalent.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Refrigeration and air conditioning mechanics usually work for companies that install and service air-conditioning and refrigeration systems. Some are self-employed.

Experienced refrigeration and air conditioning mechanics may advance to supervisory positions. Alberta certified journeyman refrigeration and air conditioning mechanics who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, over 75 per cent of people employed as refrigeration and air conditioning mechanics work in the following industries:

- **Construction**
- **Metals, Metal Fabrication and Machinery Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,250 Albertans are employed in the Refrigeration and Air Conditioning Mechanics occupational group which is expected to grow 1.4 to 2.4 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice refrigeration and air conditioning mechanics earn 50 per cent of the journeyman wage rate in their place of employment in the first year, 60 per cent in the second, 75 per cent in the third and 85 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$23 to $32 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Refrigeration and Air Conditioning Mechanics occupational group working part-time or full-time earned from **$19,300 to $82,400 a year.** The average salary was **$55,700 a year.**

Refuse Collector

Produced JUNE 2003

Refuse collectors pick up non-recyclable waste materials from homes, apartment buildings and businesses along designated routes. They may be employed by municipalities or for private waste management companies.

NOC Number(s): 7621
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M o i**

Duties

In general, refuse collectors:

- hop on and off garbage trucks, following established routes through residential alleys and streets or through business and industrial areas
- empty waste bins or throw plastic garbage bags into the truck.

In many municipalities, the duties of refuse collectors are combined with those of refuse truck drivers (for more information, see the Refuse Truck Drive occupational profile).

Working Conditions

Refuse collectors work outdoors in all weather conditions with garbage that is sometimes smelly and messy. They must observe safety precautions to avoid the spread of disease and avoid injuries associated with lifting heavy objects, handling sharp materials and working in high traffic areas. Many municipalities request that citizens limit the weight of garbage in their containers; however, refuse collectors are sometimes required to lift items weighing over 20 kilograms.

Refuse collectors may start work early in the morning or work afternoon shifts. The length of their working day varies from one employer to another. Some private sector employees work ten hours a day, five days a week.

Personal Characteristics

Refuse collectors need the following characteristics:

- the ability to be on their feet, lift heavy objects and work at a steady pace all day
- the ability to get along with fellow workers, customers and members of the public.

They should enjoy physical labour, taking a methodical approach to their work and working outdoors.

Educational Requirements

There are no standard minimum education requirements for refuse collectors. Some employers require job applicants to have grade 12 or equivalent, and pass a medical exam.

Refuse collectors who also drive trucks must have an appropriate driver's license (Class 5, Class 5 with an air brake endorsement or Class 3 with an air brake endorsement, depending on the type of truck).

Refuse collectors are **trained on the job**.

Employment and Advancement

(section revised JANUARY 2006)

Refuse collectors are employed by:

- cities, towns and rural municipalities
- waste management companies that contract their services to municipalities and businesses.

Refuse collectors who have an appropriate driver's license and are able to read maps and find addresses quickly may advance to refuse truck driver positions (for more information, see the Refuse Truck Driver occupational profile). Advancement opportunities to other positions are best for those who have a high school diploma.

Refuse collectors are part of the larger National Occupational Classification 7621: Public Works and Maintenance Labourers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Management, Administrative and Other Support Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 2,550 Albertans are employed in the Public Works and Maintenance Labourers occupational group which is expected to grow 0.6 to 1.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since refuse collectors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for refuse collectors.)

Most municipalities have a core of permanent workers in which the employment turnover rate is low. However, temporary employees may be hired to help during peak periods around Christmas and spring clean-up, and for vacation relief during summer months. Employment turnover is somewhat higher in the private sector so job openings may occur more frequently.

Salary

(section revised OCTOBER 2005)

Income figures for refuse collectors vary depending on the employer and the method of payment. Those employed in the private sector may be paid according to the number of stops or by the hour.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Public Works and Maintenance Labourers occupational group working part-time or full-time earned from **$13,500 to $66,800 a year.** The average salary was **$34,200 a year.**

Refuse Truck Driver

Produced JUNE 2003

Refuse truck drivers pick up non-recyclable waste materials from homes, apartment buildings and businesses along designated routes, and transport them to landfill sites or incinerators for disposal. They may be employed by municipalities or private waste management companies.

NOC Number(s): 7422
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O M i**

Duties

Refuse truck drivers may work alone or in teams with refuse collectors. Their duties vary from one employer to another but, in general, they:

- check trucks to ensure that they are in safe driving condition
- drive along established routes through residential streets and alleys or through business and industrial areas
- pick up and deposit garbage into trucks equipped with compactors
- communicate with dispatchers concerning delays, accidents, equipment breakdowns or other maintenance problems
- refuel trucks at depots
- drive to disposal sites to empty trucks when they are full
- keep a daily log
- maintain trucks and equipment at the end of the day, including cleaning the compactor body
- maintain a clean cab, ensure that brakes are adjusted and the fluids topped up.

Some refuse truck, tractor-trailer, front-end pickers and roll-off bin drivers operate automated and semi-automated equipment to unload large garbage containers such as dumpsters. Others drive garbage trucks around residential routes and, if they work alone, empty residential waste bins and throw plastic garbage bags into the truck. In many municipalities, the duties of refuse collectors are combined with those of refuse truck drivers (for more information, see the Refuse Collector occupational profile).

Working Conditions

Refuse truck drivers work in all weather conditions with garbage that is sometimes smelly and messy. They must observe safety precautions to avoid the spread of disease and to prevent injuries associated with lifting heavy objects, handling sharp materials and working in traffic areas. Some refuse truck drivers are required to push/pull or lift items weighing up to and sometimes over 20 kilograms.

Refuse truck drivers generally work weekdays, morning or afternoon shifts. The length of their working day varies from one employer to another. Some private sector employees work ten-hour days.

Personal Characteristics

Refuse truck drivers need the following characteristics:

- the ability to read maps and find addresses quickly
- the ability to communicate and get along with customers, fellow workers or the general public.

Those who work on residential routes must be physically able to lift heavy objects at a steady pace for long hours.

Refuse truck drivers should enjoy routine, repetitive work and driving.

Educational Requirements

Refuse truck drivers are **trained on the job**. There are no standard minimum education requirements; however, some employers prefer to hire applicants who have a high school diploma or equivalent.

Employers generally require applicants for refuse truck driver positions to:

- be in good physical condition
- hold an Alberta Class 5, 3 or 1 driver's license with air brakes endorsement (depending on the type of truck) for a specified minimum length of time
- have a specified minimum number of demerits.

Experience manoeuvring large trucks in small spaces is a definite asset.

Employment and Advancement

(section revised JANUARY 2006)

Refuse truck drivers are employed by:

- cities, towns and rural municipalities
- waste management companies which contract their services to municipalities and businesses.

Experienced drivers may move into other driving occupations (for more information, see the Municipal Recycling Truck Driver and Truck Driver occupational profiles). Advancement opportunities are best for those who have a high school diploma. They may move into other positions in the organization or advance to supervisory positions.

Refuse truck drivers are part of the larger National Occupational Classification 7422: Public Works Maintenance Equipment Operators. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Transportation and Warehousing**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,800 Albertans are employed in the Public Works Maintenance Equipment Operators occupational group which is expected to grow 0.9 to 1.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since refuse truck drivers form only a small part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for refuse truck drivers.)

Most municipalities have a core of permanent workers in which the employment turnover rate is low. However, in some municipalities, temporary employees are hired to help during peak periods around Christmas and spring clean-up and for vacation relief during summer months. Employment turnover is somewhat higher in the private sector so job openings may occur more frequently.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Public Works Maintenance Equipment Operators occupational group working part-time or full-time earned from **$16,700 to $53,600 a year.** The average salary was **$40,200 a year.**

© Government of Alberta, Human Resources and Employment

Registered Nurse

Produced SEPTEMBER 2004

Registered nurses provide professional nursing services for individuals, families, groups and communities, deliver health-education programs and provide consultative nursing services to promote, maintain and restore patient health.

NOC Number(s): 3152.1
Minimum Education: 3 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **S M D**

Duties

Registered nurses may work independently or as members of a health care team. Key roles include:

- providing direct care
- assessing the needs of individuals, families, groups or communities
- planning, implementing and documenting nursing care plans
- co-ordinating patient care
- health counselling
- managing and implementing patient care plans, leading nursing teams and advocating for clients.

In hospitals and related health care settings, these roles may include activities such as:

- co-ordinating the activities of multi-disciplinary teams responsible for planning and implementing patient care plans
- observing, assessing and monitoring patient symptoms, reactions and progress
- independently implementing nursing interventions as needed
- collaborating with other members of health care teams regarding patient treatments and examinations
- administering medications, injections and intravenous therapy
- preparing patients and assisting surgeons during operations
- assisting in childbirth, managing labour and caring for newborns and their families
- preventing or treating injuries or illness
- supervising the provision of patient and client care
- managing nursing services.

Registered nurses may specialize in providing a particular type of care (e.g. emergency/trauma care or critical care) or in working with a particular type of patient (e.g. working with children or with individuals who have heart disease).

Increasingly, nurses are employed in community and workplace settings as well as traditional health care settings. For more information, see the Community Health Nurse and Occupational Health Nurse profiles.

For information about nursing duties specific to psychiatric units and facilities, see the Psychiatric Nurse occupational profile.

Working Conditions

Nursing can be intellectually, physically and emotionally demanding. Nurses are often exposed to infectious bacteria and viruses and, in acute care settings, work with very sick patients. They are routinely required to lift up to 25 kilograms (e.g. helping to lift patients).

In institutional settings, nurses work a variety of shifts including nights, weekends and holidays.

Personal Characteristics

Registered nurses need the following characteristics:

- problem solving and critical thinking abilities
- effective verbal and written communication skills
- organizational skills
- good judgment and the ability to make decisions quickly, especially in stressful situations
- patience, understanding and a caring attitude
- flexibility, humour and enthusiasm
- the ability to lead and work co-operatively with others
- general good health.

They should enjoy working with and consulting others, solving problems, providing care and directing the work of others.

Educational Requirements

In Alberta, registered nurse status requires a **diploma or bachelor's degree in nursing**. The following post-secondary institutions offer approved nursing education programs:

- **Athabasca University**
- **Grande Prairie Regional College**
- **Grant MacEwan College** in Edmonton
- **Keyano College** in Fort McMurray
- **Lethbridge Community College**
- **Medicine Hat College**
- **Mount Royal College** in Calgary
- **Red Deer College**
- **University of Alberta** in Edmonton
- **University of Calgary**
- **University of Lethbridge**.

These schools offer collaborative programs to enable students to graduate with a bachelor's degree in nursing. Degree programs may allow students to exit at the Diploma level.

Admission requirements vary but generally include a high school diploma with an overall average of at least 60 or 65 per cent in:

- English 30
- Biology 30
- Chemistry 30 (some institutions will accept Science 30)
- Math 30 or Pure Math 30 (some institutions will accept Math 31, Physics 30, or at least 60 per cent in Math 33 or Applied Math 30)
- a fifth 30-level course (Social Studies 30 or a 30-level language recommended).

Admission to quota programs is competitive so higher marks may be required to gain admission.

For current information on programs and mature student admission policies, please check post-secondary calendars or websites.

Continuing education programs are often offered on an as needed basis.

Other Requirements

(section revised OCTOBER 2004)

Under the current legislation governing registered nurses in Alberta, the Nursing Profession Act and associated regulations, only registered members of the Alberta Association of Registered Nurses (AARN) may call themselves or practice as a Registered Nurse.

Employment and Advancement

(section revised JANUARY 2006)

Registered nurses are employed by:

- regional health authorities
- clinics, (medical, dental and community)
- nursing homes
- home care agencies
- large corporations and insurance companies
- government services (e.g. penitentiaries, outpost nursing, the foreign service, the Canadian Armed Forces).

Some nurses are self-employed.

Advancement to supervisory or administrative positions may require a bachelor's degree in nursing. Nurses may move into related occupations such as researcher, manager or university professor.

In Alberta, most people employed as registered nurses work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 27,150 Albertans are employed in the Registered Nurses occupational group which is expected to grow 3.3 to 4.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that over 600 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for nurses vary depending on the employer and the nurse's hours, educational qualifications, experience and responsibilities.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the General Duty Registered Nurses occupational group working part-time or full-time earned from **$15,200 to $61,800 a year.** The average salary was **$48,700 a year.**

2004 salaries for registered nurses who worked full-time (1921 hours a year) and were represented by United Nurses of Alberta **started at $50,580 a year**.

Rehabilitation Practitioner

Produced FEBRUARY 2005

Rehabilitation practitioners help children and adults who have disabilities to become more independent and live active lives as participating members of the community. They usually work as part of a team to assess, design and implement intervention and teaching activities which address individuals' residential, educational, social, employment and recreational needs.

NOC Number(s): 4212
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S M i**

Duties

Rehabilitation practitioners work with children, adolescents and adults who have developmental, emotional or physical disabilities. They may specialize in working with people in a particular age group or with people who have a specific type of disability.

In general, rehabilitation practitioners:

- assess clients' abilities and needs
- help clients explore lifestyle, educational and career options
- educate and support clients in making use of community services related to their recreational, medical, learning, vocational and leisure needs
- identify programs and employers that provide relevant services and help clients access those services
- maintain progress records
- assist clients in developing support networks
- assist with personal care needs
- provide support, training and guidance to clients and their families.

Rehabilitation practitioners may work as part of a team of professionals (including doctors, psychologists, teachers and therapists) and family members to develop and implement specific rehabilitation plans that include behavioural, residential, social or employment goals.

Working Conditions

Hours of work may vary considerably depending on the rehabilitation practitioner's work setting. Shift work is required in residential settings because they operate 24 hours a day. In other settings, rehabilitation practitioners usually work standard office hours. Some evening hours may be required to attend meetings, program sessions, workshops or seminars, and do the reading required to keep up to date on trends and services in rehabilitation.

Personal Characteristics

Rehabilitation workers need the following characteristics:

- empathy and respect for the people they work with
- enthusiasm, a positive attitude and persistence
- good communication skills including well developed listening skills and the ability to advocate effectively
- the ability to motivate people
- good organizational skills
- the ability to work independently or as part of a team with other professionals.

They should enjoy helping and working with others and developing innovative approaches to problems.

Educational Requirements

(section revised APRIL 2005)

In Alberta, the following post-secondary institutions offer programs related to rehabilitation services:

- **Bow Valley College** offers a 36 week Disability and Community Support certificate program. The entrance requirement is a high school diploma with at least 60 per cent in English 33 or 30 or equivalent.
- **Grande Prairie Regional College** offers a one year Disability and Community Support certificate program and a two year diploma program. The entrance requirement for both programs is a high school diploma or equivalent with English 30 (or at least 60 per cent in English 33). A first aid certificate, CPR certificate and criminal record check are required prior to practicum.
- **Grant MacEwan College** in Edmonton offers a two year Disability Studies - Leadership and Community diploma program that is also available part-time evenings. The entrance requirements are a high school diploma or equivalent with at least 65 per cent in English 30 (or 75 per cent in English 33), a letter of reference and 50 hours of related volunteer or work experience, and a current immunization record. A first aid certificate and criminal record check are required by the beginning of the intake term. Grant MacEwan College also offers 30 credit certificate and 60 credit diploma programs in Disability Management in the Workplace. The entrance requirement is a high school diploma or equivalent.
- **Lakeland College** in Lloydminster offers a two year Rehabilitation Services diploma program. The entrance requirements are a high school diploma or equivalent with English 30 (or 65 per cent in English 33) and a criminal record check.
- **Lethbridge Community College** offers a two year Disability and Community Rehabilitation diploma program which is also available through distance education. The entrance requirements are a high school diploma with English 30 or 33 (Biology 30 is recommended) and at least 14 to 16 hours of volunteer experience in a rehabilitation setting. Students who have employment experience may be eligible for Prior Learning Credit.
- **Medicine Hat College** offers a one year Hearing Assistant and Vision Assistant certificate programs and a two year Intervenor for DeafBlind Persons diploma program. The entrance requirements are a high school diploma with English 30, a 30 level science and one other 30 level course such as Social Studies 30, first aid and CPR certificates, a criminal record check, child welfare check and health immunization.
- **Mount Royal College** in Calgary offers a two year Disability Studies diploma program. The entrance requirement is a high school diploma with English 30.
- **Portage College** in Lac La Biche offers a one year Rehabilitation Services certificate program and a two year diploma program. The entrance requirement is Grade 12 including English 30 or 33, or equivalent. A criminal record check and child welfare check are required prior to the first practicum placement.
- **Red Deer College** offers a two year Rehabilitation Services diploma program. The entrance requirement is a high school diploma or equivalent with English 30 (or 65 per cent in English 33), or equivalent.

Graduates of two year diploma programs may qualify for admission to related degree programs such as the four year Bachelor of Community Rehabilitation program at the **University of Calgary**. It is the student's responsibility to determine which courses will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Rehabilitation practitioners work for community-based agencies, families, school boards, hospitals, long term care agenices and government programs that provide:

- employment services for individuals who have disabilities
- residential supports
- educational services
- recreational programs
- outreach programs.

With additional education or on-the-job training, rehabilitation practitioners may move into related areas such as employment counselling, disability management or behaviour support management.

Rehabilitation practioners are part of the larger National Occupational Classification 4212: Community and Social Service Workers. In Alberta, over 75 per cent of people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 9,600 Albertans are employed in the Community and Social Service Workers occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 160 to 260 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since rehabilitation practioners form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for rehabilitation practioners.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for rehabilitation practitioners vary considerably depending on work setting and qualifications.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Community and Social Service Workers occupational group working part-time or full-time earned from **$14,100 to $104,900 a year**. The average salary was **$27,800 a year**.

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Religious Leader

Produced NOVEMBER 2002

Religious leaders, including ministers, rabbis, imam, priests, pastors, chaplains, bishops, curates and leaders in other religious communities, conduct religious services and provide inspirational, philosophical and religious education and guidance to members of their communities.

NOC Number(s): 4154
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **S M I**

Duties

According to the tenets of their faith, religious leaders may:

- conduct worship services and preside at ceremonies marking rites of passage (e.g. birth, marriage, death)
- organize religious education for their communities
- conduct group meetings
- counsel individuals and couples concerning spiritual, emotional and personal needs
- visit people in prisons, hospitals and homes.

Depending on the religious community, religious leaders may also administer and manage, in conjunction with a board of representatives, the finances of their religious community.

Institutional chaplains serve populations in institutions such as hospitals, post-secondary institutions, prisons and long term care facilities. Since they work with people from many faiths, chaplains may facilitate worship and study in traditions significantly different from their own.

Working Conditions

Religious leaders may serve religious communities of any size in urban or rural areas, in large well-equipped buildings or limited spaces. Their hours of work vary tremendously; they may be on call virtually every day for long periods of time. The work can be both emotionally demanding and rewarding.

Personal Characteristics

Religious leaders need the following characteristics:

- a commitment to serve
- maturity and self-discipline
- exemplary character
- a sensitivity to the needs of others
- well developed oral and written communication skills
- the ability to handle stressful situations in a healthy, balanced manner.

They should enjoy serving people, administering the rites of their faiths and the operations of their religious community and planning programs of worship and education.

Educational Requirements

(section revised JANUARY 2006)

Most religious communities expect prospective religious leaders to first become active volunteers in houses of worship or the religious community, and seek guidance from religious leaders in their faith. Formal training requirements are **specific to the particular faith**. Knowledge of more than one language is a definite asset.

In many faiths, ordination requires a bachelor's degree plus several years of post-graduate study in a seminary or theological college. In Alberta, suitable bachelor's degree programs are offered by public and private universities and colleges located throughout the province. To identify post-secondary programs associated with their particular faith, interested individuals should consult the appropriate religious leaders in their communities.

The required theological training may be offered by private colleges or seminaries located nearby, or may require study in another province or country. There may be language requirements (e.g. Greek, Hebrew) and students may be expected to do related field work (e.g. chaplaincy or missionary work) during the summer months.

Ordination as a rabbi usually requires five years of prescribed study in a seminary. Seminary entrance requirements include a university degree, a strong background in Jewish Studies and the ability to read Hebrew (and, sometimes, Yiddish). Many seminaries require one year of study in Israel as part of the five year program.

Imam must be graduates of a recognized seminary/institution or have equivalent knowledge and experience endorsed the the Islamic Council of Imams - Canada.

In Alberta, the following public institutions offer non-sectarian bachelor's degree programs in religious studies. These programs do not lead directly to employment as a religious leader, but may provide an acceptable background for theological training.

- **Alliance University College** in Calgary offers:
  - a four year B.Min. degree program in Theology
  - a four year B.Min. degree program with specializations in youth and intercultural studies
  - a three and four year BA in Christian Studies.
- **Canadian Nazarene University College** in Calgary offers a three year BA in Christian Studies. The entrance requirement is an average of at least 60 per cent in five approved Grade 12 subjects including English and a math or second language
- **Canadian University College** in College Heights offers three year and four year BA degree programs in Religious Studies. The entrance requirement is a high school diploma with English 30 and at least three other 30-level courses.
- **Concordia University College of Alberta** in Edmonton offers a three year and a four year BA degree programs in Religious Studies. The admission requirement is an average of at least 60 per cent in English 30 and four other appropriate 30-level subjects.
- **Gardner College - A Centre for Christian Studies** in Camrose offers a three year Bachelor of Religious Studies program and a four year Bachelor of Theology program. The entrance requirement for both programs is a high school diploma or equivalent.
- The **King's University College** in Edmonton offers a three year Pre-Seminary BA program and a three year BA program in Theology. The entrance requirement for both programs is a high school diploma with an average of at least 60 per cent in five Grade 12 subjects including English 30.
- **Newman Theological College** in Edmonton offers a one year Bachelor of Theology program for graduates of the Diploma of Theological Studies program (or equivalent). The entrance requirement for the two year diploma program is a high school diploma.
- **Rocky Mountain College** in Calgary offers a four year BA in Theology, a four year BA in Leadership Development, a three year BRS in Relgious Studies, a two year Christian Leadership diploma program and a one year Christian Discipleship certificate program. The entrance requirement is four matriculation level courses including English with a minimum average of 65 per cent in the four courses.
- **Taylor University College and Seminary** in Edmonton offers a four year Bachelor of Arts in Religion and Theology degree program. The entrance requirement is a high school diploma with an average of at least 60 per cent in English 30 and four approved Grade 12 subjects.
- The **University of Alberta** in Edmonton offers four year BA general and honours degree programs in Religious Studies with specializations in Eastern and Native American religious traditions, thematic studies, and Western religious traditions. The entrance requirement is an overall average of at least 65 per cent in English 30, a 30-level language other than English or Pure Math 30 (or Math 30), and three other approved Grade 12 subjects (Social Studies 30 recommended). The University of Alberta in Camrose also offers degree programs in religious studies.
- The **University of Calgary** offers four year and five year (co-op) BA degree programs in Religious Studies and in Religious Studies and Applied Ethics. The entrance requirement for both programs is a high school diploma with an average of at least 70 per cent in English 30 and four other appropriate Grade 12 subjects.
- The **University of Lethbridge** offers four year Bachelor of Arts and five year combined degree programs in Religious Studies. The entrance requirement is an average of at least 65 per cent in English 30 and three other approved 30-level subjects plus a fifth Grade 12 subject.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Religious leaders must have the endorsement of their religious orders.

Employment and Advancement

(section revised JANUARY 2006)

Religious leaders may work in:

- urban or rural communities in Canada
- overseas missions in developing countries
- inner city missions
- chaplaincies in prisons, hospitals, the Canadian Forces or post-secondary institutions.

Experienced religious leaders may advance to administrative roles in larger religious community units or religious institutions. With additional education, they may also move into social work, counselling, nursing, journalism or teaching (in schools or post-secondary institutions).

Religous leaders are part of the larger National Occupational Classification 4154: Ministers of Religion. In Alberta, most people employed in this classification work in the **Repair, Maintenance, Personal and Other Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Repair, Maintenance, Personal and Other Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,300 Albertans are employed in the Ministers of Religion occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since religious leaders form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for religious leaders.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Employment demand varies among different religious communities.

Salary

(section revised OCTOBER 2005)

Salaries for religious leaders may vary considerably between faiths and within some faiths. A house or housing allowance may be provided.

Depending on the religious community, religious leaders may be paid significantly less than people in other occupations that require comparable levels of education. Some leaders enhance their incomes through additional fees charged for officiating ceremonies.

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Ministers of Religion occupational group ranged from **$13,900 to $117,800 a year.** The average salary was **$42,100 a year**.

Reporter

Produced MAY 2005

Reporters gather information and write articles for print media (newspapers and magazines) or prepare news items (written, audio or videotaped) for broadcast on radio or television.

NOC Number(s): 5123
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: I S M

Duties

Reporters in the print and broadcast media make information about local, national and international events readily available to the public. In general, they:

- research and verify information found in documents and from meetings, interviews, conferences, court hearings, artistic performances, sporting events and press statements
- interview, in person or by telephone, individuals involved in news events, witnesses, knowledgeable people and others whose activities are of public interest
- go "live, on location" to provide eyewitness coverage of some events
- translate complex issues into concise, informative news stories
- research and write articles or stories as assigned by editors or find stories on their own initiative
- write news stories that are accurate, fair and balanced
- write critical reviews of literary or artistic works based on personal knowledge, judgment and experience
- produce concise written copy from notes or tape recordings taken during interviews or press conferences
- organize material into factual or analytical reports.

Newspaper reporters use computers to compose and edit text, and send copy to an editor or the news wire (in the case of a wire service).

Novice reporters and those working for small weekly newspapers may be given a variety of assignments including taking photographs, writing headlines and captions, laying out pages, editing wire service copy, and writing editorials or columns in addition to covering all aspects of local news. With experience, they may progress to:

- general reporting or covering a beat (a particular news area such as police, city hall or law courts)
- writing more analytical material or syndicated columns which may be distributed to a large group of newspapers or magazines
- producing syndicated audio or video reports for subscribing radio or television stations
- reporting for news services which provide printed material to subscribing newspapers and magazines.

Magazine reporters may do extensive in depth research because magazines have relatively specialized readerships. Some magazine reporters work on a freelance basis.

Broadcast reporters often report live from the scene of a news event, composing their story on the spot. They also may:

- obtain video footage of current news events
- gather sound and video for news, current affairs programs and documentaries
- conduct interviews using digital or tape recorders
- write and edit their own reports under the supervision of a news editor or director
- assist in directing camera operators who are filming news events.

In smaller radio and television stations, broadcast reporters may operate electronic equipment such as television cameras, broadband links, and audio and video editing machines and software.

Online producers (reporters) write stories for websites that may include audio, video and print components. They may write original stories or adapt traditional news items.

For information about **photojournalists**, see the Photographer occupational profile.

Working Conditions

Print, broadcast and online reporters must cope with a hectic pace, the pressure of deadlines, unhelpful news sources, long irregular hours and a work environment filled with noise, interruptions and distractions. Some assignments (e.g. covering wars or natural disasters) are dangerous.

Personal Characteristics

Print and broadcast reporters need the following characteristics:

- strong interviewing skills
- an interest in people and current events
- initiative, curiosity, persistence, resourcefulness, objectivity, integrity, creativity and an accurate memory
- the physical and emotional stamina required to cope with the pressures of their competitive, fast-paced jobs
- the ability to present facts and opinions clearly, concisely, logically and coherently in a style free of grammatical and spelling errors
- a willingness to keep abreast of current events and developments.

In addition, broadcast media reporters require:

- composure and poise on camera or in front of a microphone
- fluency in another language or some knowledge of the pronunciation of other languages
- formal voice training.

All reporters should enjoy finding novel approaches to stories, dealing with people, stimulating interest in news stories and taking a methodical approach to compiling information.

Educational Requirements

There are no standard formal education requirements for reporters but employers generally prefer to hire applicants who have a related degree. Reporters need detailed knowledge of the geography, history, economy, politics, media law and social life of the communities and countries in which they work. For writing critical reviews and analyses, they also need specialized knowledge in a particular area such as art or politics. Computer and Internet research skills are essential; notetaking skills are an asset.

For newspaper and magazine reporters, practical experience on school publications or small rural weeklies is extremely valuable. Large daily newspapers usually require their reporters to have at least three years of practical experience at another daily newspaper.

For broadcast reporters, experience in radio or television stations is essential. Many broadcast reporters begin in small rural or local cable stations as volunteers or through a work experience component of a post-secondary education program.

Online producers must be able to work with technical people, have some knowledge of website programming and content management systems, and be able to use digital cameras and video equipment.

Post-secondary institutions throughout Alberta offer three year and four year Bachelor of Arts (BA) degree programs in communications, Canadian studies, economics, political science and history. In general, entrance requirements include a high school diploma with a specified minimum average (60 to 80 per cent depending on the program) in English Language Arts 30-1 (or equivalent) and four other appropriate Grade 12 subjects (e.g. Social Studies 30, Pure or Applied Math 30, a second language). Specific course requirements vary.

The following Alberta post-secondary institutions offer programs in journalism, broadcasting or communications:

- **Athabasca University** offers a two year Bachelor of Professional Arts degree program by distance education. Applicant must hold a recognized two or three year diploma in a related field.
- **Grant MacEwan College** in Edmonton offers a two year Journalism diploma program and a four year Bachelor of Applied Communications in Professional Writing degree program. The entrance requirement for both programs is a high school diploma or equivalent with at least 65 per cent in English Language Arts 30-1 and four other Grade 12 courses selected from specified groups.
- **Lethbridge Community College** offers a two year Communication Arts diploma program. The entrance requirement is at least 60 per cent in English Language Arts 30-1 (or 70 per cent in ELA 30-2, or equivalent) and Social Studies 30.
- **Mount Royal College** in Calgary offers a Broadcasting diploma program and a four year Bachelor of Applied Communications degree program with a specialization in journalism. The entrance requirement for the

Broadcasting program is an average of at least 60 per cent in English Language Arts 30-1 or 30-2 and four other appropriate Grade 12 subjects, and successful completion of the Watson-Glazer Critical Thinking Test. The entrance requirement for the journalism degree program is an average of at least 60 per cent in English Language Arts 30-1, Social Studies 30 and three other appropriate Grade 12 subjects.

- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Radio and Television diploma program. The entrance requirement is a high school diploma with 60 per cent in English Language Arts 30-1 or 30-2, and at least 50 per cent in Grade 11 math, science and social studies.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Journalism diploma program with specializations in photojournalism or print media, and a two year Cinema, Television, Stage and Radio diploma program with a specialization in broadcast news. The entrance requirement for both programs is a high school diploma or equivalent with at least 60 per cent in English Language Arts 30-1 or 30-2 (or equivalent).
- The **University of Calgary** offers a four year Bachelor of Arts degree program in Communications Studies. Entrance requirements include English Language Arts 30-1, Pure or Applied Math 30 or Math 31, and three of the following: Biology 30, Chemistry 30, Physics 30, Science 30, Social Studies 30, a language other than English, one five credit Grade 12 subject.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward Bachelor's degree programs at other institutions. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Competition for entry-level reporter jobs is keen. Employment prospects may be better for those who specialize in a particular field, combine writing with other skills (e.g. research, languages, business) or are willing to relocate.

New graduates often are employed in one or more contract or temporary positions before they find full-time positions with benefits. When they have more experience, they may move to a larger station or publication. Experienced reporters may advance to editorial positions in print media or become news anchors or producers in broadcast media.

Good writing skills also can be applied in related occupations such as technical writer, advertising copywriter, public relations worker, media consultant, legislative aide or advisor, educational writer, fiction writer, biographer, screen writer or editor. For more information, see the Advertising Copywriter, Creative Writer, Editor, Public Relations Representative and Technical Writer occupational profiles.

Reporters are part of the National Occupational Classification 5123: Journalists. In Alberta, most people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,600 Albertans are employed in the Journalists occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for reporters in the magazine industry vary tremendously because they generally work on a freelance basis and are paid a fee for each individual article.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Journalists occupational group working part-time or full-time earned from **$18,900 to $59,300 a year.** The average salary was **$43,100 a year.**

Respiratory Therapist

Produced JANUARY 2005

Respiratory therapists assist physicians in diagnosing, treating, educating and promoting wellness in patients who have respiratory and associated disorders.

NOC Number(s): 3214.1
Minimum Education: 3 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O M i**

Duties

Respiratory therapists work with patients of all ages who have breathing problems associated with acute and chronic heart and lung disorders (e.g. asthma, cystic fibrosis, emphysema), sleep disorders, heart disease, trauma, high risk deliveries or organ system failures (e.g. kidney disease, diabetes, neurological disorders).

In general, respiratory therapists:

- assess patients' respiratory systems and perform breathing tests and blood gas tests
- develop respiratory treatment plans and evaluate patient progress
- work with physicians, nurses and other health care professionals in managing patient care
- administer medical gases and medications by aerosol therapy to manage and control breathing-related abnormalities
- educate patients about their conditions and teach appropriate disease management techniques including how to use their medications and respiratory equipment
- provide continuous mechanical ventilation, monitor life signs and assist with cardio-pulmonary resuscitation during the transportation of critically ill patients and in emergency departments, intensive care units and operating rooms
- maintain and insert a variety of artificial airways
- operate, inspect, maintain and calibrate respiratory equipment (oxygen equipment, humidifiers, ventilators, anaesthetic machines and blood gas analyzers) and other life support systems
- keep records of the therapies and services provided.

Working Conditions

Respiratory therapists may care for patients in clinical settings or provide consultative and community services. Since patients may experience breathing problems at any time of the day or night, respiratory therapists in clinical settings may work shifts including nights, weekends and holidays. Some therapists work on-call and travel to assess and follow-up with patients.

Respiratory therapists may spend the majority of their working hours on their feet. Most have to do some lifting (up to 10 kg) but the amount of lifting required is dependent on where they work. Some may routinely help to lift immobile patients. Therapists working in emergency or intensive care units or in patients' homes may experience high levels of stress.

Personal Characteristics

Respiratory therapists need the following characteristics:

- good communication skills
- compassion and an interest in caring for others
- good organizational and problem solving skills
- critical thinking skills
- the ability to act quickly in crisis situations

- the ability to work effectively independently and in a team.

The should enjoy using equipment to perform tasks requiring precision, having clear guidelines and organized methods, and dealing with people.

Educational Requirements

In Alberta, the following technical institutes offer three year programs in Respiratory Therapy.

- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a Respiratory Therapy diploma program in conjunction with hospitals in the Capital Health Authority and Caritas Health Group and other agencies. The program includes clinical practicums in second and third year. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English 30, Biology 30, Math 30 or 31 or Pure Math 30, and Chemistry 30. Current First Aid and CPR certificates are also required.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a Respiratory Therapy diploma program in conjunction with hospitals in southern Alberta. The program includes 10 months of clinical experience. The entrance requirement is a high school diploma or equivalent with an average of at least 60 per cent in English 30 or 33; Pure or Applied Math 30 or Math 31; Biology 30 and Chemistry 30. Physics 30 is recommended. Immunization is required.

Both of these programs are quota programs so admission is competitive. Higher marks are generally required to gain admission.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Health Disciplines Act and Respiratory Therapists Regulation, only registered members of the College and Association of Respiratory Therapists of Alberta (CARTA) may call themselves Respiratory Therapists. Registered members provide health services listed in the Regulation.

Employment and Advancement

(section revised JANUARY 2006)

Respiratory therapists work in:

- hospitals
- diagnostic laboratories
- community and home care programs (public and private)
- educational institutions
- research facilities
- pharmaceutical companies
- medical equipment sales and service companies
- community clinics.

In large urban hospitals, therapists may work in emergency departments, intensive care units, intensive care nursery units, chronic cardiopulmonary disease units, outpatient departments, operating theatres and recovery rooms, medical and surgical floors, pediatric units, caserooms and newborn nurseries, pulmonary functions and blood-gas diagnostic areas or in rapid transport of critically ill patients.

Experienced respiratory therapists may advance to clinical specialist or supervisory positions. Without additional education, other opportunities for advancement are limited.

Respiratory therapists are part of the larger National Occupational Classification 3214: Respiratory Therapists, Clinical Perfusionists and Cardio-Pulmonary Technologists. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry),
- **location** in Alberta,
- **employment turnover** (work opportunities generated by people leaving existing positions),
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before), and

- **size of the occupation.**

Over 1,000 Albertans are employed in the Respiratory Therapists, Clinical Perfusionists and Cardio-Pulmonary Technologists occupational group which is expected to grow 2.7 to 3.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover. Most of these new positions will be for respiratory therapists.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

In 2003, Albertans in the Respiratory Therapists, Clinical Perfusionists and Cardio-Pulmonary Technologists occupational group earned from **$36,600 to $60,500 a year.** The average salary was **$51,000 a year** (2003 Alberta Wage and Salary Survey).

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Restaurant Manager

Produced MARCH 2003

Restaurant managers plan, organize, direct and control the operation of establishments in which food and beverages are served.

NOC Number(s): 0631
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D M S**

Duties

The specific duties performed by restaurant managers depend on the nature of the establishments they manage. In general, however, restaurant managers:

- consult with chefs to select menu items that will appeal to customers and make efficient use of food supplies, and assign prices to menu items
- design wine and liquor lists appropriate to menus
- estimate supplies needed, order supplies and deal with food, beverage and equipment suppliers and their representatives
- recruit and train new employees, schedule work hours and keep employment records
- oversee the daily operations of the restaurant to ensure health and safety regulations and policies are met
- ensure that maintenance and decor standards are maintained
- supervise restaurant staff
- maintain friendly contact with customers and resolve customer complaints
- develop marketing strategies and supervise advertising campaigns
- track the overall profitability of the restaurant and forecast revenues
- prepare budgets and manage finances, including maintaining records of costs and payments made to suppliers, balancing daily cash received with records of sales, and depositing daily income for safekeeping.

In large restaurants or hotel chains, restaurant managers may delegate many tasks to other employees such as assistant managers or executive chefs. In smaller restaurants, executive chef and restaurant manager positions may be combined. In fast food restaurants and other food service facilities, restaurant managers may have several assistant managers, each of whom supervises a different shift.

Working Conditions

The working conditions for restaurant managers are as varied as the establishments they operate. Evening and weekend work is common. The work can be hectic during peak dining hours and dealing with customer complaints or problem employees can be stressful.

Personal Characteristics

Restaurant managers need the following characteristics:

- the interpersonal skills required to deal effectively with employees and customers
- the ability to remain calm and solve unexpected problems
- excellent communication skills, both in person and in writing
- the stamina and self-discipline required to work long hours when necessary
- good organizational skills
- the ability to develop marketing ideas for attracting and retaining customers.

They should enjoy co-ordinating information and the activities of others; setting work schedules, monitoring staff and controlling inventory; and dealing with suppliers and customers.

Educational Requirements

(section revised FEBRUARY 2006)

The best background for restaurant managers is **a combination of experience and education in the field.** Computer skills (for working with point of sale systems) and the ability to speak a second language are definite assets.

It is still possible to work from the bottom up in restaurant management if on the job training is supplemented with further education. Some large restaurant chains sponsor their own management training programs. However, employers may prefer to hire applicants who already have related post-secondary education.

In Alberta, the following institutions offer post-secondary programs related to the supervision and management of hospitality services.

- **Lethbridge Community College** offers a two year diploma program in Hotel and Restaurant Management. The entrance requirement is a high school diploma or equivalent with credit in English 30 or 33, Math 30 or 33 or Applied Math 30 or Pure Math 30.
- The **Northern Alberta Institute of Technology** in Edmonton offers a:
    - one year certificate and a two year Hospitality Management diploma program. The minimum education requirement for both programs is Grade 11 including English and math.
    - two year Food and Nutrition Management diploma program. The entrance requirement for this program is a high school diploma with English 30 or 33, Math 20 or 23, Biology 20 or 30 and any other 30 level science.
- **Red Deer College** offers one year certificate and two year diploma programs in Hospitality and Tourism with a specialization in food and beverage management. The entrance requirement is a high school diploma or equivalent.
- **Robertson College** offers a 40-week International Hospitality and Hotel Management program. The entrance requirement is a high school diploma with a Grade 12 English.
- The **Southern Alberta Institute of Technology** in Calgary offers a two year plus three month internship diploma program in Hotel and Restaurant Management. The entrance requirement is a high school diploma or equivalent with English 30 or 33 and Pure or Applied Math 30.
- **Training Inc.**, a private vocational school in Lethbridge, offers a 12 week Hotel and Restaurant Operations program. Applicants must be contact the school for entrance requirements.
- **Trend College**, a private vocational school in Edmonton, offers a 34-week Hotel and Tourism Management Studies program and a 50 week International Hotel and Tourism Management Studies program. Applicants must be at least 19 years of age, undergo a personal interview and have a high school diploma or equivalent qualifications.
- The **University of Calgary** Haskayne School of Business offers a four year Bachelor of Hotel and Resort Management (BHRM) degree program that may also be taken as a five year co-op program. The entrance requirement is a high school diploma with an overall average of at least 70 per cent in English 30, Math 30, and three other appropriate Grade 12 subjects, and a SAIT diploma in Hotel and Restaurant Management (or equivalent) with a grade point average of 3.0/4 or above. The University of Calgary also offers four year and five year co-op Bachelor of Commerce (B.Comm.) degree programs in Tourism and Hospitality Management.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

The **Alberta Tourism Education Council (ATEC)** offers one-day staff seminars and two-day management seminars in service excellence which may benefit restaurant managers.

Employment and Advancement

(section revised JANUARY 2006)

Most restaurant managers are employed in privately owned restaurants, clubs and hotels. Many own their establishments.

Restaurant managers who have related post-secondary education usually advance relatively quickly and may qualify for further advancement to district manager and top executive positions in large organizations. They may also move into sales representative positions for food service supply companies or become managers of private clubs.

Restaurant managers are part of the larger National Occupational Classification 0631: Restaurant and Food Service Managers. In Alberta, most people employed in this classification work in the **Accommodation and Food Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Accommodation and Food Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 13,800 Albertans are employed in the Restaurant and Food Service Managers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 200 to 350 **new** positions will be created each year **in addition** to job openings created by employment turnover.(**Note**: Since restaurant managers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for restaurant managers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for restaurant managers vary a great deal, depending on the size, location and volume of business of the restaurant. Incomes for restaurant managers who own their own restaurants vary even more widely.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Restaurant and Food Service Managers occupational group working part-time or full-time earned from **$13,000 to $179,900 a year.** The average salary was **$30,900 a year.**

Retail Salesperson

Produced SEPTEMBER 2003

Retail salespersons sell or rent goods and services to customers in stores and other retail businesses.

NOC Number(s): 6421
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S d**

Duties

Retail salespersons work in many different types of retail establishments, assisting customers with the selection and purchase of merchandise. In specialty stores, they sell or rent merchandise ranging from books, food and clothing to major appliances, stereos and automobiles. In large department stores, they usually work in specific departments. In smaller owner-managed stores, salespersons are responsible for serving customers in all areas of the store.

Their first and foremost responsibility is to sell merchandise and ensure customer satisfaction. To accomplish this objective, salespersons may:

- greet customers and assist them in identifying their needs (e.g. the size of shoe or refrigerator they need)
- demonstrate, fit or measure merchandise for customers and promote products such as credit card services
- advise customers on the use and care of merchandise
- answer questions regarding the store and its merchandise
- process payments (cash, cheques, direct debit and charge cards) and provide sales receipts
- assist customers with returns and exchanges of merchandise
- wrap customer purchases or arrange for delivery
- estimate or quote prices, credit terms, trade-in allowances and warranties
- check and order stock
- stock shelves and maintain display areas.

Salespersons must be aware of current store sales promotions, policies regarding payment and exchanges, and store security practices. They may be required to develop new markets by soliciting new business when they are not busy serving customers.

Salespersons are often solely responsible for the contents of the cash register and, at the end of their shift, may:

- count money in the cash register
- separate charge slips, coupons and exchange vouchers
- make deposits at a cash office or financial institution.

Working Conditions

Salespersons usually work indoors in pleasant surroundings, often in shopping malls. They must stand or walk for long periods of time and may be required to routinely lift items weighing up to 10 kilograms. Having to meet sales targets, sometimes sales per hour targets, can be stressful.

Many salespersons work part-time shifts. Evening, weekend and holiday work is common. Some salespersons are required to wear uniforms and most wear identification pins.

Personal Characteristics

Retail salespersons need the following characteristics:

- good health
- a neat, well-groomed appearance
- the ability to perform arithmetic calculations quickly and accurately

- an awareness of current fashion trends and customer tastes
- the ability to remain courteous, patient and tactful when dealing with difficult customers
- the ability to work under pressure.

They should enjoy having clear rules and organized methods for their work, persuading people to buy or rent merchandise and handling merchandise.

Educational Requirements

There are **no standard education requirements** for retail salespersons; however, most employers prefer to hire high school graduates. Those who have post-secondary education have a greater opportunity for advancement to supervisory and management positions, particularly if they are located near the head offices of larger firms.

Salespersons who sell expensive or complex merchandise may require special knowledge or skills. For example, those who sell computer systems must have at least a basic knowledge of electronics and computer software or hardware to be able to answer customer questions.

Small shops train staff on the job; larger stores may have their own in-house training programs.

Employment and Advancement

(section revised JANUARY 2006)

Many salespersons are employed on a part-time basis.

Advancement is based on experience and job performance. Experienced salespersons may move to busier stores, supervisory and management positions, or related departments such as staff training or customer relations. With additional education and training, they may move into related occupations such as purchaser, human resources officer, real estate agent or insurance agent.

There are more opportunities for advancement in large department stores or within retail chains or multi-store operations. Those in smaller stores may be required to change employers to find jobs with broader responsibilities.

Retail salespersons are part of the larger National Occupational Classification 6421: Retail Salespersons and Sales Clerks. In Alberta, most people employed in this classification work in the **Retail Trade** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Retail Trade industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 62,550 Albertans are employed in the Retail Salespersons and Sales Clerks occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that over 600 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since retail salespersons form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for retail salespersons.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Wages vary greatly depending on the size and nature of the store and the salesperson's experience. Many retail salespersons start at **minimum wage** and their wages increase with experience. Some earn bonuses or commissions based on sales in addition to a base salary. Some work on a commission only basis. They may receive employee discounts on merchandise.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Sales Retail Salespersons and Sales Clerks occupational group working part-time or full-time earned from **$10,400 to $154,800 a year.** The average salary was **$25,900 a year.**

Retail Shelf Stocker

Produced SEPTEMBER 2003

Retail shelf stockers unpack and price merchandise and stock shelves and displays. They may also pack customers' purchases.

NOC Number(s): 6622
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M s o**

Duties

Shelf stockers are employed in a wide variety of retail outlets and their duties vary somewhat depending on the size and type of store. In general, however, they:

- unpack products received by stores and may count, weigh or sort items
- check shipping and purchasing documents to ensure that the proper items and amount have been received and that items have not been damaged or spoiled
- stock shelves, racks and display areas with merchandise and store extra items in stockrooms
- regularly check shelves and displays to ensure that they are well-stocked, attractively organized and merchandise is protected from damage
- obtain articles for customers from display locations or from the stockroom
- direct customers to desired items and anticipate customer needs as much as possible
- report out-of-stock situations to management and correct or report any pricing discrepancies
- clean up broken items and other messes
- sweep aisles, dust display racks and perform other general cleaning duties.

Shelf stockers who work in grocery stores may also:

- maintain displays of perishable items such as produce or dairy products by rotating items to keep the freshest in the back or on the bottom
- bag or box purchases for customers
- carry or use carts to carry customers' purchases out to the parking lot and help customers pack groceries into their vehicles.

Shelf stockers working in other large retail outlets may:

- use bar-code scanning equipment to record incoming stock, verify pricing and maintain a computerized stock inventory
- wrap items such as sound recordings in cellophane
- attach protective devices to merchandise to protect against shoplifting.

Those working in smaller stores may:

- use a stamp or stickers to price items according to price lists
- sweep or shovel snow from the sidewalk in front of the store
- act as cashiers (see the Cashier profile for more information).

Working Conditions

Hours of work vary in this occupation. Some grocery shelf stockers work in the middle of the night when there are few or no customers in the store. Weekend work is common.

Shelf stockers spend most of their time on their feet. Their work routinely involves bending and lifting items weighing up to 25 kilograms. Working conditions are generally pleasant, although stock rooms may be dusty. Some stores require shelf stockers to wear uniforms and/or personal safety equipment such as steel-toed shoes.

Personal Characteristics

Shelf stockers need the following characteristics:

- the strength and stamina required to lift heavy boxes and work long hours on their feet
- good motor co-ordination and manual dexterity
- honesty
- the ability to work with little or no supervision
- good organizational skills
- the ability to get along well with others.

They should enjoy having clear rules and organized methods for their work, serving and assisting customers and handling merchandise.

Educational Requirements

Shelf stockers are **trained on the job**. Employers often hire students for part-time positions but generally prefer to hire high school graduates for full-time jobs.

Union membership is a requirement of employment in some places of employment.

Employment and Advancement

(section revised JANUARY 2006)

Most shelf stockers are employed in grocery stores and department stores. Some are employed in drug stores, hardware stores and other specialty stores (e.g. large book stores, shoe stores).

Students are often hired for part-time evening and weekend positions, or for temporary positions during busy periods (e.g. the Christmas season). Those who succeed in this entry-level position may advance to other more responsible positions.

Retail shelf stockers are part of the larger National Occupational Classification 6622: Grocery Clerks and Store Shelf Stockers. In Alberta, most people employed in this classification work in the **Retail Trade** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Retail Trade industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

About 13,850 Albertans are employed in the Grocery Clerks and Store Shelf Stockers occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 160 to 310 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since retail shelf stockers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for retail shelf stockers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Hourly wages for shelf stockers vary considerably depending on the employer and the worker's experience and responsibilities.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Grocery Clerks and Store Shelf Stockers occupational group working part-time or full-time earned from **$9,400 to $33,300 a year.** The average salary was **$15,600 a year.**

Retail Store Manager

Produced OCTOBER 2003

Retail store managers plan, organize, direct and control the operations of stores that sell merchandise and services to the public. They may be employees or self-employed.

NOC Number(s): 0621
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **D M i**

Duties

Retail store managers manage retail outlets such as department stores, supermarkets, car dealerships and specialty boutiques. Their primary responsibility is to ensure that their businesses make a profit.

Specific duties vary depending on the size and nature of the business but, in general, store managers:

- supervise the day-to-day operations of the store
- supervise department managers or directly supervise staff, set up work schedules and assign duties
- determine staffing requirements, hire or oversee the hiring of staff and, when necessary, dismiss employees
- train new employees or arrange for training
- administer budgets and authorize financial transactions
- monitor product inventories and trends in consumer buying to anticipate which products will be in demand
- implement or administer price and credit policies
- monitor anti-theft procedures and policies, and take appropriate action when thefts occur
- oversee security measures, including ensuring that doors and safes are locked and alarms are set, and answering calls from security companies and the police in case of break-ins
- monitor the outside of the building and make sure safety hazards such as hanging ice are removed
- provide assistance when employees are unusually busy
- deal with customer complaints and recommendations.

Store managers may also:

- organize staff safety programs
- locate and select merchandise for resale
- meet with manufacturers' sales representatives to discuss product lines
- co-ordinate activities in various store departments
- develop and implement marketing strategies
- decide how merchandise should be displayed
- meet other store managers or shopping mall managers to discuss issues of common concern (e.g. mall policies)
- write and authorize reports to head office.

Working Conditions

Store managers work indoors in pleasant surroundings. They are on their feet most of the time and often work long hours, evenings and weekends, particularly if they are self-employed. Managers employed by chain stores may be required to move frequently, especially during their initial years with the company.

Personal Characteristics

Retail store managers need the following characteristics:

- good oral and written communication skills
- strong organizational skills
- the ability to motivate and lead staff

- good business sense
- the ability to work well under pressure and deal with unexpected situations calmly and effectively
- the ability to get along with all kinds of people.

They should enjoy taking charge of situations, having clear rules and guidelines for their work and negotiating with people.

Educational Requirements

Employers generally require managers to have **several years of previous experience in the retail industry.** Many employers also require applicants to have related post-secondary education. Some large retail chains have in-house management trainee programs and only promote managers from within the company.

In-house training programs vary from employer to employer. Many national chains have programs that include both classroom and in-store training. On the other hand, some retail organizations have no formal training program.

Part-time and full-time post-secondary programs related to business administration, management and entrepreneurship are offered by colleges, technical institutes and universities throughout the province. Admission requirements vary from one program to another but generally include a high school diploma with Grade 12 English and math courses. For information about marketing programs in particular, see the Marketing Manager occupational profile.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Entrepreneurs are strongly advised to take small business training programs, work in a store similar to one they would like to own and conduct a detailed market study before investing in an existing retail business or establishing a new one.

Employment and Advancement

(section revised JANUARY 2006)

Retail store managers work in communities and retail organizations of all sizes. Competition for entry-level management positions is often keen.

Managers of retail chain stores may be promoted to larger stores, regional management positions or management positions in specific areas such as materials acquisition. Advancement opportunities are best for those who have related post-secondary education.

Retail store managers are part of the larger National Occupational Classification 0621: Retail Trade Managers. In Alberta, most people employed in this classification work in the **Retail Trade** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Retail Trade industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 37,000 Albertans are employed in the Retail Trade Managers occupational group which is expected to grow 0.7 to 1.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 250 to 630 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since retail store managers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for retail store managers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for retail store managers **vary greatly** depending on their experience and qualifications, and the nature of the business. When they are starting a new business or during economically depressed periods, self-employed managers may make very little. However, there is no income ceiling for successfully established entrepreneurs.

Salaries for store managers employed by others do not vary quite as dramatically but still differ widely.

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Retail Trade Managers occupational group ranged from **$12,900 to $125,700 a year.** After three years, salaries ranged from **$15,300 to $190,500 a year.** The average salary was **$47,300 a year**.

Rig Technician

Apprenticeship and Industry Training

Produced JULY 2005

Rig technicians operate oil and gas drilling rigs. This newly defined trade has three journeyman certification levels commonly known as motorhand (level 1), derrickhand (level 2) and driller (level 3).

NOC Number(s): 8232.1, 8412.1
Minimum Education: Apprenticeship Trade
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O D m; O M d**

Duties

Drilling rigs drill the initial holes for oil and gas wells. Each rig consists of a derrick, draw-works and other surface equipment that provide the force required for drill pipe to bore a hole into the earth. After a drilling rig reaches the layer of earth that contains oil or gas, well casing is installed and the rig is dismantled and moved to another site.

Motorhands (Rig Technician Level 1):

- regularly maintain drilling rig engines, transmissions, heating systems, diesel electric generators and motors, hydraulic systems and other mechanical equipment
- maintain equipment logs and preventative maintenance records
- monitor inventories of fuels, oil filters, lube oils, greases and other service items
- work under the direction of the derrickhand and driller
- supervise, train and work with floorhands and laborers, ensuring they work safely and efficiently
- participate in rig mobilization and de-mobilization (rig-up and tear-out).

Derrickhands (Rig Technician Level 2):

- operate and maintain drilling fluid systems and pumps during drilling
- mix fluid chemicals and additives as required by the program
- handle sections of drill string assembly from a platform on the rig derrick during tripping operations
- monitor and record mud flows and volumes and fluid properties (mud weight)
- work under the direction of the driller and assist the driller with crew supervision, ensuring the crew works safely and efficiently
- participate in rig mobilization and de-mobilization.

Drillers (Rig Technician Level 3):

- supervise rig crews and the operation of drilling equipment
- ensure crews work safely and efficiently
- report directly to drilling rig managers
- operate the draw-works, rotary equipment and pumps, and supervise the assembly of drill string
- ensure that safety and support equipment is functioning properly
- monitor the progress of drilling operations and communicate with well-site supervisors
- keep a current record of drilling progress
- train crew members
- introduce procedures which may help the crew to work more safely or effectively
- participate in the supervision of rig mobilization and de-mobilization.

Working Conditions

(section revised FEBRUARY 2006)

Working conditions vary with duties, rig locations and weather conditions. Rig technicians often work outdoors where they are exposed to extremes in weather as well as the dirt, dust, noise and fumes common around rigs. They may be required to work two weeks on followed by one week off. Rig technicians may have to travel throughout the province and are often responsible for their own transportation to the work site.

Rig technicians may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Rig technicians need the following characteristics:

- the ability to get along well with co-workers
- leadership and management skills
- good communication skills
- good organizational skills
- physical strength and stamina
- emotional stability
- mechanical aptitude
- manual dexterity
- the ability to judge distances and spatial relationships.

They should enjoy working with equipment and machinery, working in a team environment, and compiling information and maintaining records.

Educational Requirements

(section revised FEBRUARY 2006)

To work in Alberta, level 1 and 2 rig technicians must be ONE of the following:

- registered apprentices
- certified journeymen
- have a Qualification or Equivalency credential.

Level 3 rig technicians must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is three years (three 12 month periods) that include a minimum of 1500 hours of on-the-job training and four weeks (30 hours per week) of technical training each year.

Rig technician apprenticeship technical training and on-the-job training is cumulative for the three levels of certification. Apprentices may opt out of the program after completing one or more periods of the program and qualify for the level of certification related to the highest period completed.

There are three levels of journeyman certification:

- Level 1 Rig Technicians can perform motorhand tasks
- Level 2 Rig Technicians can perform motorhand or derrickhand tasks
- Level 3 Rig Technicians can perform motorhand, derrickhand or driller tasks.

Applicants who have related training or work experience may be eligible for credit or certification.

Technical training is arranged by Alberta Apprenticeship and Industry Training.

Outside of the apprenticeship program, **Enform** (formerly Petroleum Industry Training Service and Canadian Petroleum Safety Council) in Calgary and Nisku (near Edmonton) offers courses for those employed on drilling rigs and pre-employment courses for those wanting to gain experience prior to working in the industry.

Related Post-Secondary Fields of Study

(section revised FEBRUARY 2006)

Rig technicians are employed by oil and gas well drilling contractors. Some rigs operate year round but employment in this occupation may be seasonal. Winter is the busiest season for drilling activity.

Experienced rig technicians may move into rig management or other management positions in the drilling industry. Or they may be hired by specialist companies as mud technicians or directional drillers or move into drilling-related equipment sales or rig training, regulatory or safety positions.

Alberta certified journeyman rig technicians who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Motorhands and derrickhands are part of the larger National Occupational Classification 8412: Oil and Gas Well Drilling Workers and Services Operators. Drillers are part of the larger National Occupational Classification 8232: Oil and Gas Well Drillers, Servicers, Testers and Related Workers. In Alberta, most people employed in these classifications work in the **Oil and Gas Extraction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the Oil and Gas Extraction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 10,350 Albertans are employed in the Oil and Gas Well Drilling Workers and Services Operators occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 250 to 370 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Over 17,600 Albertans are employed in the Oil and Gas Well Drillers, Servicers, Testers and Related Workers occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 440 to 620 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since motorhands, derrickhands and drillers form only a part of the larger occupational groups on which these forecasts are based, only a portion of the new positions created will be for rig technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to salary standards for drilling and service rig crews recommended by the Canadian Association of Oilwell Drilling Contractors (CAODC) in October 2005:

- motorhands are paid a base wage of **$25.50 an hour** plus a living or subsistence allowance (from **$25 a day** when in camp to **$100 a day** where there is no camp)
- derrickhands on drilling rigs are paid a base wage of **$30 an hour** plus a living or subsistence allowance (as above)
- drillers earn a base wage of **$36 an hour** plus a living allowance (as above).

Some employers offer bonuses but employment may not be year-round.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the:

- Oil and Gas Well Drillers, Servicers, Testers and Related Workers occupational group working part-time or full-time earned from **$17,800 to $157,000 a year.** The average salary was **$55,100 a year.**
- Oil and Gas Well Drilling Workers and Services Operators occupational group working part-time or full-time earned from **$24,800 to $257,000 a year.** The average salary was **$60,100 a year.**

Alberta Human Resources and Employment

Roofer

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Roofers prepare and apply protective coverings to flat and sloped roof surfaces.

NOC Number(s): 7291.1
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O i**

Duties

On flat roofs of commercial and industrial buildings that are under construction, roofers:

- put a layer of vapour barrier or insulation on the roof deck
- make the surface watertight by spreading hot bitumen (a tar-like substance) over and under layers of roofing felt (fabric soaked in bitumen) or applying single-ply membranes of waterproof rubber or thermoplastic compounds
- install metal or membrane flashing (strips) to protect the edges of roofing materials.

On sloped residential roofs that are covered with shingles made of asphalt, fibreglass, tile, slate, wood shakes or metal, roofers:

- apply plastic coatings and membranes, fibreglass or felt over parts of the surface before applying shingles
- nail shingles in overlapping rows
- cement or nail flashing over the joints around vent pipes or chimneys
- cover exposed nailheads with cement to prevent rust and water leakage.

Roofers may also:

- inspect problem roofs to determine the best procedures for repairing them
- estimate materials required and quote costs
- repair older roofs
- waterproof roofs, basements, foundations, plaza decks or parkades.

Working Conditions

Roofers work outdoors on roofs of varying heights. When the weather is good and there is a lot of building activity, roofers may work considerable amount of overtime. There is some risk of injury due to falling and when working with hazardous hot materials. The heat can be intense for those working with hot bitumen in the summer.

Roofers may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Roofers need the following characteristics:

- strength and stamina
- good sense of balance and the ability to work in high places
- an interest in working outdoors
- able to get along well with co-workers.

They should enjoy physical exercise and working with their hands.

Educational Requirements

To work in Alberta, roofers must be ONE of the following:

- registered apprentices

- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,420 hours of on-the-job training and six weeks of technical training in each of the first three years and a minimum of 1,600 hours of on-the-job training in the fourth. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Roofer apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at at the Northern Alberta Institute of Technology (NAIT) in Edmonton and by mobile delivery in Calgary.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Most roofers are employed by roofing contractors on construction or repair jobs. Some roofers are members of unions and work from union halls.

This occupation is less sensitive to economic changes than some construction trades because there is steady demand for repair work even if construction is slow. Roof systems require regular replacement every 15 to 20 years depending on the system used.

Roofers may advance to supervisory positions or become contractors themselves. Alberta certified journeyman roofers who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Roofers are part of the larger National Occupational Classification 7291: Roofers and Shinglers. In Alberta, most people employed in this classification work in the **Construction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (see above)
- trends and **events** affecting overall employment (especially in the Construction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,050 Albertans are employed in the Roofers and Shinglers occupational group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since roofers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for roofers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice roofers earn at least 65 per cent of the journeyman wage rate in their place of employment in the first year, 75 per cent in the second, 85 per cent in the third and 95 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$17 to $24 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Roofers and Shinglers occupational group working part-time or full-time earned from **$21,500 to $103,500 a year.** The average salary was **$42,400 a year.**

Room/Housekeeping Attendant

Produced MARCH 2003

Room/housekeeping attendants keep hotels, motels, clubs and dormitory rooms and associated lobbies, halls and banquet rooms neat, clean and well stocked.

NOC Number(s): 6661
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M O i**

Duties

Duties and responsibilities vary from one place of employment to another but, in general, housekeeping attendants:

- sweep and mop floors and/or vacuum carpets
- dust and polish furniture, and keeping it arranged properly
- vacuum draperies and upholstered furniture
- empty ashtrays and garbage containers
- sort, count, mark and fold linens
- make beds and/or change bedding
- scrub, disinfect and polish bathroom fixtures
- replace towels, soap and other supplies
- report damage, theft and articles found to the executive housekeeper or supervisor
- observe precautions required to protect hotel and guest property
- keeping storage areas and carts well stocked, clean and tidy.

In hotels and motels, housekeeping attendants may clean lobbies, halls and banquet rooms as well as guest rooms. They are generally responsible for:

- cleaning carpets and floors
- shampooing carpets and upholstered furniture
- hanging draperies
- changing light bulbs
- collecting soiled linens and garbage
- receiving and storing linens
- moving furniture.

In some establishments, housekeeping attendants are also responsible for setting up banquet and meeting rooms, and/or making minor repairs.

Working Conditions

Room/housekeeping attendants work shifts, including weekends and holidays. They are required to push/pull and lift items weighing up to 25 kilograms.

Personal Characteristics

Room/housekeeping attendants need the following characteristics:

- good health and stamina (to maintain a rigorous pace of manual work)
- conservatively groomed (their appearance reflects on the establishment)
- good communication skills
- the ability to work co-operatively with a variety of other employees.

They should enjoy having clear rules and guidelines for their work and using cleaning equipment.

Educational Requirements

(section revised OCTOBER 2005)

There are **no specific educational requirements** for room/housekeeping attendants. Training is generally on the job. Employers may require character references that indicate job applicants are honest and trustworthy.

The **Alberta Tourism Education Council (ATEC)** has developed a process for housekeeping room attendants to demonstrate their skills and write an examination to earn a certificate that is recognized throughout Canada in the tourism and hospitality industry.

Employment and Advancement

(section revised JANUARY 2006)

Room/housekeeping attendants are employed in hotels, motels, clubs and dormitories. Employment may be seasonal.

With experience, room/housekeeping attendants may move into other jobs in the tourism industry. Those who have supervisory skills and a high school diploma (or are willing to upgrade their education) may advance to executive housekeeper positions.

Room/housekeeping attendants are part of the larger National Occupational Classification 6661: Light Duty Cleaners. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Accommodation and Food Services**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 16,700 Albertans are employed in the Light Duty Cleaners occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 80 to 260 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since room/housekeeping attendants form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for room/housekeeping attendants.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Light Duty Cleaners occupational group working part-time or full-time earned from **$10,500 to $53,300 a year.** The average salary was **$18,600 a year.**

Safety Codes Officer

Produced MAY 2003

Safety codes officers inspect the construction, installation and maintenance of structures and systems to ensure compliance with relevant codes, standards and regulations. They are concerned with the elements of public safety covered under the Safety Codes Act.

NOC Number(s): 2264
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I d**

Duties

Building safety codes officers inspect projects currently under construction for compliance with the Alberta Building Code. Their duties vary depending on their level of certification but, in general, they:

- examine blueprints and issue permits for proposed construction, relocation or demolition
- inspect buildings under construction to ensure compliance with building codes
- ensure that all problems identified by safety codes officers have been rectified before approving a building for occupancy

Electrical safety codes officers inspect a wide range of installations where electrical work is being done. In general, they ensure that electrical wiring and appliances, exterior wiring and industrial electrical equipment are installed safely and in accordance with electrical regulations.

Plumbing and gas safety codes officers ensure that private sewage systems, plumbing and gas appliances, fixtures, installations and equipment comply with applicable plumbing and gas regulations.

Boiler and pressure vessel safety codes officers:

- review and audit the implementation of authorized quality control programs
- ensure that boilers and pressure vessels are installed and operated safely in accordance with the boilers and pressure vessels regulations
- inspect power plants, pressure plants and steam plants
- review designs and conduct shop inspections and certification checks
- investigate accidents
- examine power engineers and pressure welders
- provide evidence required to prosecute violators.

Fire safety codes officers perform fire inspections and take measures to reduce danger to life and property, report fires and investigate the cause, origin and circumstances of fires within their jurisdiction.

Amusement rides, elevators and passenger ropeways (ski lifts) safety codes officers:

- conduct in-service inspections
- review plans and conduct initial inspections and regulatory audits
- conduct accident investigations
- issue permits.

Working Conditions

Safety codes officers work in a variety of settings including offices (reviewing plans and specifications, issuing permits), construction sites, fire or accident scenes, ski slopes and amusement fairs. Some overtime may be required when construction or recreation activities are at their height.

Safety codes officers must observe safety precautions such as wearing hard hats and safety shoes to avoid injury while working on construction sites.

Personal Characteristics

Safety codes officers need the following characteristics:

- good communication skills, in person and in writing
- good public relations skills to ensure that laws and regulations are properly enforced.

They should enjoy having clear rules and organized methods for their work, analyzing information and dealing with people.

Educational Requirements

Safety codes officers usually have a **combination of related training and work experience** such as journeyman certification or post-secondary education plus years of experience related to the type of inspection involved. For example, some boiler and pressure vessel safety codes officers must have a high school diploma and a First Class Power Engineering Certificate (for more information, see the Power Engineer occupational profile) or a university degree in mechanical engineering or equivalent, plus at least five years of experience in the design, fabrication, operation and maintenance or inspection of high pressure steam plants and equipment.

All safety codes officers must be certified by the Safety Codes Council. Different levels of certification require successful completion of approved courses.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Safety codes officers are employed by municipal governments and accredited agencies and corporations that provide compliance monitoring services.

Experienced safety codes officers may advance to senior positions and, depending on their qualifications, to management positions.

Safety codes officers are part of the larger National Occupational Classification 2264: Construction Inspectors. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Construction**
- **Professional and Technical Services**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,050 Albertans are employed in the Construction Inspectors occupational group which is expected to grow 2.0 to 3.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since safety codes officers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for safety codes officers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salary ranges for safety codes officers vary depending on the employer and type of inspection involved.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Construction Inspectors occupational group working part-time or full-time earned from **$24,700 to $94,900 a year.** The average salary was **$60,300 a year.**

© Government of Alberta, Human Resources and Employment

Safety Officer

Produced MARCH 2005

Safety officers facilitate the development, implementation and maintenance of workplace safety programs.

NOC Number(s): 2263
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I D**

Duties

Safety officers promote positive safety attitudes, and safe work practices and environments in their organizations. Their duties and responsibilities vary depending on where they work but, in general, they:

- evaluate work procedures and environments to identify potential hazards and ensure that adequate controls are in place
- advise managers and employees about safe work practices and safety standards and regulations
- recommend appropriate procedures and equipment for safety and compliance with relevant laws and regulations
- develop health and safety policies and programs, and instruct safety courses
- facilitate employee safety committees and programs
- promote safe work practices and injury/fatality prevention activities
- participate in accident investigations
- work with others on emergency planning.

These responsibilities may require that safety officers:

- inspect machines to identify potential hazards, recommend risk reduction measures and supervise the installation of safety features or the introduction of safer procedures
- regularly inspect premises for fire hazards and adequate fire protection, and inspect fire fighting equipment
- conduct noise level surveys
- study accidents to learn what caused them and develop procedures, methods or devices to prevent similar occurrences in the future
- identify harmful or hazardous dusts, vapours or gases, and advise management about corrective measures.

In trucking companies, safety officers inform truck and trailer drivers about traffic and safety regulations, loading and unloading policies, and proper care of equipment. They also investigate collisions and recommend measures to improve safety records and conserve equipment.

In mines, safety officers ensure compliance with health and safety laws and regulations. They check supports, electrical and mechanical equipment, explosives storage and air quality. They also instruct safety and first-aid courses and lead rescue activities.

In electrical utility companies, safety officers instruct workers about safety measures, check equipment and tools, observe crews at work, examine tunnels and ditches, investigate accidents and devise preventative measures.

In some organizations, safety officers have additional responsibilities related to workers compensation, environmental protection, risk management or plant security.

Working Conditions

Safety officers work in offices and at production sites. They usually work a standard 40 hour week but are sometimes required to work overtime.

Lifting up to 10 kilograms may be required.

Personal Characteristics

Safety officers need the following characteristics:

- excellent communication skills, both in person and in writing
- the ability to motivate workers and executives
- a willingness to do the reading required to keep up with new developments (e.g. in personal protection equipment, laws and regulations, research into links between worker illnesses and the materials to which they are exposed).

They should enjoy having clear rules and organized methods for their work, analyzing information, and dealing with people.

Educational Requirements

There are **no standard education or training requirements** for safety officers. However, employers generally prefer to hire people who have computer skills and a combination of relevant experience and education such as:

- journeyman certification or extensive work experience related to the employer's business (e.g. trucking, mining, electrical utilities)
- post-secondary education in occupational health and safety or a related field (e.g. chemistry, engineering, medicine, microbiology, physics).

Once hired, safety officers may obtain additional training on the job or take related continuing education courses offered by post-secondary institutions and professional associations. The following institutions offer full programs related to safety that are available to Albertans:

- The **University of Alberta** offers a 325 hour Occupational Health and Safety Certificate program through the Faculty of Extension in various locations: Edmonton, Red Deer (Red Deer College), Grande Prairie (Grande Prairie Regional College), Calgary and Fort McMurray (Keyano College). This program takes about three years to complete and is designed for practicing health and safety officers (and those aspiring to become officers). Applicants for the progam must be at least 21 years of age, have a high school diploma and have some experience in the work force.
- The **British Columbia Institute of Technology (BCIT)** in Burnaby, B.C. offers Occupational Health and Safety certificate and diploma programs. Students normally take two to five years to complete the certificate program which is available by distance education.
- **Ryerson University** in Toronto offers an Occupational Health and Safety distance education program. Ryerson also offers the only four year degree program in Canada with a specialization in Occupational Health and Safety.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

The Board of Canadian Registered Safety Professionals offers the designation Canadian Registered Safety Professional (CRSP) to applicants who have been employed as safety officers for at least three years and have successfully completed an evaluation, interview and examination process.

Employment and Advancement

(section revised JANUARY 2006)

In Alberta, safety professionals are employed primarily by large utitlity, manufacturing, resource (e.g. oil and gas, forestry) and transportation companies.

Opportunities for advancement to management positions are best for those who have post-secondary education.

Safety officers are part of the larger National Occupational Classification 2263: Inspectors in Public and Environmental Health and Occupational Health and Safety. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Oil and Gas Extraction**
- **Professional and Technical Services**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,100 Albertans are employed in the Inspectors in Public and Environmental Health and Occupational Health and Safety occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since safety officers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for safety officers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for safety officers vary depending on the individual's qualifications and responsibilities.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Inspectors in Public and Environmental Health and Occupational Health and Safety occupational group working part-time or full-time earned from **$18,300 to $172,300 a year.** The average salary was **$62,500 a year.**

© Government of Alberta, Human Resources and Employment

Sales Representative (Wholesale, Nontechnical)

Produced OCTOBER 2003

Wholesale, nontechnical sales representatives sell their organizations' nontechnical goods and services to retail, commercial, industrial and professional clients.

NOC Number(s): 6411
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S M d**

Duties

Wholesale, nontechnical sales representatives are referred to more simply as sales representatives throughout this profile. Their duties and responsibilities vary depending on the types of goods and services they sell. For example, sales representatives may work for:

- **food and beverage producers** selling foodstuff to grocery stores and restaurants, and negotiate with retail merchants to improve product exposure (e.g. shelf position, advertising)
- **book publishers** promoting the sale of textbooks to educational institutions or magazines to newsstands, hotels, book stores and libraries
- **transportation companies** selling freight and shipping services to manufacturers, wholesalers and distributors.

However, in general, sales representatives:

- telephone or personally visit client organizations on a regular or periodic basis
- find out what client organizations need and emphasize how their product lines can meet those needs
- identify possible new clients by using resources such as business directories, following up leads from existing clients, meeting people through voluntary organizations and clubs, and attending trade shows and conferences
- approach potential new clients and present the benefits and uses of their product lines
- estimate or quote prices, credit terms, warranties and delivery dates and prepare sales proposals
- prepare sales contracts and reports, process orders and make delivery arrangements
- consult with clients to resolve any problems after a sale and provide ongoing support
- keep up to date with information about product innovations, competitors and market conditions and adjust their sales strategies accordingly
- prepare sales projection figures for the coming year.

Working Conditions

Sales representatives often work long and irregular hours. They may be required to carry bulky samples or product catalogues weighing up to 10 kilograms. They may also spend a considerable amount of time travelling.

Personal Characteristics

Sales representatives need the following characteristics:

- self-confidence and self-motivation
- the ability to persevere and remain cheerful when faced with rejection
- flexibility and adaptability
- the ability to communicate with all kinds of people and focus on their concerns
- the ability to work both independently and as part of a team.

They should enjoy selling goods or services, identifying and approaching potential customers and overseeing the preparation of sales contracts.

Educational Requirements

The minimum education requirement for sales representative positions is **a high school diploma**. However, many employers prefer to hire people who have a post-secondary diploma or degree related to the nature of the business, or related experience. Basic computer skills are a definite asset.

Many large organizations have some form of training program for newly hired sales representatives. They may train new employees by:

- rotating them through various positions to give them an understanding of the business and its products.
- offering in-house classroom training followed by on-the-job training under the supervision of a sales manager.
- having new employees accompany experienced sales representatives until they are familiar with the company's products and clients.
- sending new employees to sales courses offered by industry or professional associations.

Sales representatives must keep up to date with technological and other changes affecting their customers' companies.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Sales representatives are employed by a wide variety of organizations, including:

- food and beverage producers
- manufacturers
- hotels
- petroleum companies
- business services firms
- transportation companies.

Advancement for experienced sales representatives may take the form of transfers to larger sales territories or ones with potentially greater sales opportunities. Successful sales representatives may stay in sales or advance to sales management positions. Or, they may move into marketing or become independent manufacturers agents who sell the products of more than one manufacturer.

In Alberta, over 75 per cent of people employed as sales representatives, (wholesale trade, non-technical) work in the following industries:

- **Wholesale Trade**
- **Professional and Technical Services**
- **Information, Culture and Recreation**
- **Food and Beverage Products Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 23,450 Albertans are employed in the Sales Representatives, (Wholesale Trade, Non-Technical) occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 300 to 540 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Sales representatives' earnings vary greatly and are often directly related to their job performance. Most employers offer a combination of salary plus commission, or salary plus bonus. A commission is a percentage of the price of each article or service sold. Incomes from bonuses may depend on individual performance (as commissions do), the performance of all sales workers in a particular group or the company's performance overall.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Sales Representatives - Wholesale Trade (Non-Technical) occupational group working part-time or full-time earned from **$12,000 to $195,300 a year.** The average salary was **$47,800 a year.**

Sawfiler

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Sawfilers repair, set and sharpen blades for band, chain, hand, circular and other types of saws.

NOC Number(s): 7383.5
Minimum Education: Apprenticeship Trade - Grade 10
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O M i**

Duties

Sawfilers keep lumber and wood products processing plants operating smoothly by ensuring the overall maintenance of sawmill blades and knives (e.g. chipper knives). Circular sawfilers deal with all types of saws except band saws.

Duties vary from one position to another but, in general, sawfilers:

- sharpen saws
- shape saw teeth for different cutting purposes
- straighten bent saws
- adjust circular and band saw tension.

They may use hand tools, filing machines, welding equipment, lasers, computers and other sophisticated electronic equipment.

Sawfiles may also work with millwrights and other personnel to align equipment.

Working Conditions

Sawfilers may be required to live and work in remote areas where sawmills are located. They usually work in a saw room or shop. The work is noisy and involves some heavy lifting. Sawfilers work a 40 hour-week with overtime and shift work when required.

Sawfilers may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Sawfilers need the following characteristics:

- good manual dexterity and hand-eye co-ordination
- good reading, writing and math skills
- mechanical aptitude
- physical strength and stamina
- the ability to keep up to date with changing technology
- dedication to producing a quality product
- patience.

They should enjoy doing precision work that requires some creativity.

Educational Requirements

To work in Alberta, sawfilers must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 10 education with Math 10 or 13, Pure Math 10 or Applied Math 10 and English 10 or 13 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Computer skills and programming knowledge are definite assets.

The **term of apprenticeship** for:

- **sawfilers** is four years (four 12-month periods) that include a minimum of 1,680 hours of on-the-job training and four weeks of technical training each year.
- **circular sawfilers** is three years (three 12-month periods) that include a minimum of 1,680 hours of on-the-job training and four weeks of technical training each year.

Applicants who have related training or work experience may be eligible for credit or certification.

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at at the British Columbia Institute of Technology (BCIT) in Burnaby. On-the-job training is offered in Alberta while the technical training is held in British Columbia.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Sawfilers are employed in the lumber and wood products industries, usually in sawmills and pulp mills. Some employers require their employees to be union members.

There are limited opportunities for sawfilers to advance to supervisory positions. Alberta certified journeyman sawfilers who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Sawfilers are part of the larger National Occupational Classification 7383: Other Trades and Related Occupations. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Wood Products Manufacturing**
- **Repair, Maintenance, Personal and Other Services**
- **Agriculture**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,100 Albertans are employed in the Other Trades and Related Occupations group, which is expected to grow 0.3 to 1.3 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since sawfilers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for sawfilers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice **sawfilers** earn at least 50 per cent of the journeyman wage rate in their place of employment in the first year, 60 per cent in the second, 70 per cent in the third and 85 per cent in the fourth.

Apprentice **circular sawfilers** earn at least 50 per cent of the journeyman wage rate in their place of employment in the first year, 60 per cent in the second and 70 per cent in the third.

According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates for the branches vary, but generally range from **$14 to $22 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Trades and Related Occupations group working part-time or full-time earned from **$19,100 to $51,500 a year.** The average salary was **$36,000 a year.**

Sawmill Machine Operator

Produced DECEMBER 2005

Sawmill machine operators operate, monitor and control automated machines and equipment that process logs into lumber, shingles and shakes.

NOC Number(s): 9431
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: O M I

Duties

Sawing logs into boards and planks of varying widths and thicknesses requires a fairly standard series of operations but the processes used vary from one sawmill to another. In some sawmills, the work of sawmill machine operators is labour intensive. In other mills, technological advances have decreased the amount of manual labour required.

Sawmill machine operators may use various types of automated equipment to:

- move logs from storage yards onto transfer decks
- convey logs through laser scanners that determine the most profitable cutting patterns for each log
- send logs through cut-off saws that cut logs to optimum lengths
- debark logs
- feed logs through various types of saws, edgers and trimmers to produce rough lumber
- sort and stack lumber according to length, width and thickness
- move stacks of lumber to storage yards and, later, to and from drying kilns
- feed rough lumber through planers to give it a smooth (dressed) surface
- wrap or strap lumber into packages and label packages for shipment.

In general, sawmill machine operators:

- use front end loaders, stationary deck cranes or gantry cranes to feed logs into the sawmill
- operate equipment from consoles or control rooms to scan logs for size and quality; convey logs and lumber to and from saws; saw logs into rough lumber; saw, trim, sort, stack, put in dry kiln and plane rough lumber into dressed lumber of various sizes and saw or split shingles and shakes
- monitor logs and lumber movement to ensure cuts satisfy customer requirements
- clean and maintain equipment
- attend regularly scheduled safety meetings.

Working Conditions

Sawmill machine operators work shifts that depend on production requirements. The working environment may be hot/cold, noisy or dusty, although technical advancements are improving these conditions.

Safety equipment such as hard hats, safety boots, safety glasses, gloves, high visibility vests and ear protection are required to reduce the risk of injury. Depending on the mill, machine operators may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Sawmill machine operators need the following characteristics:

- the ability to lift heavy items often
- good spatial perception
- manual dexterity
- the ability to perform repetitious tasks and remain alert to avoid accidents
- the ability to work as part of a team.

They should enjoy operating and monitoring equipment, having clear parameters and organized methods for their work, and working with others to solve problems.

Educational Requirements

Employers generally prefer to hire high school graduates but may hire people who have less education if they have experience operating machinery or equipment.

Sawmill machine operators are trained on the job. They usually start in entry level labouring positions. After a number of years, employees may be offered machine operating positions as they become available. With experience and satisfactory performance operating one type of machine, they advance to more complex tasks.

Employment and Advancement

(section revised JANUARY 2006)

Sawmill machine operators are employed in sawmills and planing mills. In some sawmills, union membership is a condition of employment.

Machine operators may move into electrician or millwright apprenticeship positions (for more information, see the Electrician and Millwright occupational profiles). Advancement to head sawyer or planer operator positions requires years of experience in various sawmill machine operating positions with the same company. Without further education such as Advanced First Aid, Lumber Grading and power engineering certification (see the Power Engineer profile), advancement opportunities are limited. Post-secondary education is a definite asset for advancement to leadership positions such as planer supervisor or sawmill supervisor.

In Alberta, people employed as sawmill machine operators work in the **Wood Products Manufacturing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Other Manufacturing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,350 Albertans are employed in the Sawmill Machine Operators occupational group which is expected to grow up to 0.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

The employment turnover rate in many sawmills is low so jobs may not be available often. Hoever, turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Wages and benefits vary considerably from one employer to another.

According to the **2005 Alberta Wage and Salary Survey**, Albertans with three years of experience working part-time or full-time in the Sawmill Machine Operators occupational group earned up **to $58,100 a year.** The average salary was **$48,500 a year.**

© Government of Alberta, Human Resources and Employment

School Business Official

Produced DECEMBER 2003

School business officials provide financial and business services to publicly funded school boards.

NOC Number(s): 0313.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D M s**

Duties

School business officials are leaders and administrators. They may specialize in a particular area or work in several areas of public education administration:

- financial management (e.g. prepare annual budgets and financial statements, provide financial management advice, develop and recommend financial strategies, conduct internal audits, prepare grant applications)
- corporate management (e.g. initiate and participate in operational planning and policy development, develop and manage information management systems, oversee the implementation of legislated requirements such as freedom of information and protection of privacy requirements, evaluate plan and policy effectiveness)
- personnel and labour relations (e.g. negotiate labour contracts, motivate staff and provide leadership, facilitate staff development, ensure compliance with labour standards, provide payroll and other human resource services)
- property management (e.g. manage building and renovation projects, oversee building maintenance, negotiate joint use agreements, manage energy conservation programs)
- student transportation (e.g. developing school bus routes, supervising day-to-day operations, purchasing vehicles and supplies, negotiating agreements, ensuring student safety)
- public relations and communications (e.g. develop and maintain positive media relations, prepare annual reports, facilitate internal and external communication).

Duties and responsibilities therefore vary considerably from one position to another and from one school district to another.

Working Conditions

School business officials usually work standard weekday hours in school board or district offices. Senior officials must attend evening school board and public meetings, and overtime is often required to meet budget and other deadlines. Depending on the position, some travel may be required.

Personal Characteristics

School business officials need the following characteristics:

- excellent oral and written communication skills
- critical thinking, logical analysis and problem solving skills
- initiative
- the ability to work alone and as part of a team
- high ethical standards.

They should enjoy directing and supervising the work of others, having clear rules and organized methods to guide their activities, and negotiating with other administrators.

Educational Requirements

School business officials need a combination of related post-secondary education and experience. For example, those in financial management positions may require an accounting designation. Most school business officials have a bachelor's or master's degree in a related discipline.

Universities and colleges throughout the province offer three and four year degree programs in business, commerce and management. In general, the entrance requirement for such programs is completion of one or two years of applicable university study, or a high school diploma with an average of 65 to 80 per cent, as specified by each institution, in English 30 and four other appropriate Grade 12 subjects (specific course requirements vary from program to program).

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Certified School Business Official is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself a Certified School Business Official, you must be a registered member of the Association of School Business Officials of Alberta (ASBOA). You do **not** have to be registered if you do not call yourself a Certified School Business Official.

Employment and Advancement

(section revised JANUARY 2006)

School business officials are employed by school authorities. They often start in junior positions and, with experience, may advance to senior positions.

School business officials are part of the larger National Occupational Classification 0313: School Principals and Administrators of Elementary and Secondary Education. In Alberta, most people employed in this classification work in the **Educational Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Educational Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,400 Albertans are employed in the School Principals and Administrators of Elementary and Secondary Education occupational group which is expected to grow 1.4 to 2.4 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 90 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since student populations are declining and no new school jurisdictions created in the foreseeable future, very few new positions will be for school business officials.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the School Principals and Administrators of Elementary and Secondary Education occupational group working part-time or full-time earned from **$17,300 to $156,600 a year.** The average salary was **$83,000 a year.**

© Government of Alberta, Human Resources and Employment

Sculptor

Produced JUNE 2005

Sculptors create original three-dimensional artworks in a wide variety of traditional media (e.g. wood, clay, metal, stone) and nontraditional media (e.g. sound and virtual reality).

NOC Number(s): 5136.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O m**

Duties

The boundaries between categories in the visual arts are much less distinct today than they once were. Traditionally, sculptors have used materials such as stone, bronze, concrete, wood, clay and plaster. Today, many sculptors use materials and methods normally associated with other disciplines. For example, they may work in, and experiment with, photography, metals of all kinds, fired ceramics, electricity, video and digital media, sound, wax, ice, plastics, performance art, fibre, textiles and other materials. They may produce only one or a limited number of copies of each piece of work.

Sculptures range in size from a small coin to several hundred acres of "live art." There are many new and emerging areas as sculptors experiment with new materials, installation techniques and mixed media applications. In some cases, sculptors employ the assistance of engineers, mechanics and other technical experts.

Many sculptors are continually studying and learning different techniques and experimenting with different materials. They keep up to date with what is going on in the art world by reading and attending exhibitions at art galleries.

Working Conditions

Sculptors' working conditions vary with their media. They may use a variety of hand tools and power tools. Some materials and tools require attention to safety practices to prevent injury.

Studios may be clean and well ventilated, or they may have less than ideal working conditions. Flying particles, falling objects, fumes, heat and chemicals are common occupational hazards. Sculptors may work at home, wherever large pieces are situated or in studios located in artist-run centres or warehouses.

The work can be physically demanding. Lifting requirements vary depending on the medium.

Personal Characteristics

Sculptors need the following characteristics:

- self-discipline and determination
- self-promotion and marketing skills
- artistic talent and creativity
- the ability to translate their ideas into finished products and critique their own work
- the ability to communicate their ideas on paper (to prepare proposals)
- the ability to deal with criticism.

They should enjoy working independently.

Educational Requirements

There are **no formal education requirements** for sculptors. However, they need:

- some knowledge of art history, composition and contemporary art criticism
- a portfolio of good quality slides of their best work
- training in the safe use of materials, tools and equipment

- small business skills (marketing and financial management skills in particular).

Prospective sculptors should look for education programs that have the best blend of technical and creative course materials for their particular interests and needs.

In Alberta, fine art programs are offered by the following post-secondary institutions:

- **Alberta College of Art and Design** in Calgary
- **Grande Prairie Regional College**
- **Grant MacEwan College** in Edmonton
- **Keyano College** in Fort McMurray
- **Medicine Hat College**
- **Mount Royal College** in Calgary
- **Red Deer College**
- **University of Alberta** in Edmonton and Camrose
- **University of Calgary**
- **University of Lethbridge**.

Admission requirements vary from one institution to another but generally include a high school diploma with English Language Arts 30-1 (or English 30) and four other appropriate Grade 12 subjects. Some institutions specify a minimum acceptable average (ranging from 60 to 80 per cent) and submission of a portfolio of previous work. For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Continuing education programs are often offered on an as needed basis.

The **Banff Centre for the Arts** offers winter and summer programs for experienced sculptors. A portfolio and a statement of learning objectives are required.

Employment and Advancement

(section revised JANUARY 2006)

Sculptors may receive commissions or fees paid in advance that allow them to buy materials and cover some living expenses while they finish a site-specific or major work. However, few sculptors can support themselves on their art work alone. Many work in other fields or do related work such as mass production design or mould making to cover their living costs and studio rent.

Sculptures may be commissioned by special request or sold in retail markets or through agents. Sculptors may display their art in:

- galleries and museums
- restaurants and clubs
- office buildings and public spaces
- parks, exhibit grounds and international expositions.

They also may market their work electronically through television or the Internet. Sometimes, film makers rent available ready-made sculptures.

Emerging sculptors can get a start by entering art competitions, art festivals or arranging their own shows in their homes or artist-run centres. Before approaching gallery owners, sculptors should do some research to identify galleries that have a style compatible with their own. Sculptors usually have one gallery representative per city.

The **Alberta Foundation for the Arts** and the **Canada Council** purchase artworks and offer grants for promising sculptors to enable them to study and work for a few months or a year at a time.

Sculptors are part of the larger National Occupational Classification 5136: Painters, Sculptors and Other Visual Artists. In Alberta, most people employed in this classification work in the **Information, Culture and Recreation Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 2,350 Albertans are employed in the Painters, Sculptors and Other Visual Artists occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since sculptors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for sculptors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Most sculptors work in other occupations to support themselves. Some sculptors receive commissions or fees paid in advance that allow them to buy materials and cover some living expenses while they finish site-specific or major works.

Sculpture prices vary considerably depending on the sculptor's reputation, size of the piece, materials used and availability of the sculptor's work. Most galleries deduct a commission ranging from 40 to 75 per cent.

A few well-established sculptors hire agents to handle marketing, bookkeeping and sales transactions.

Secondary School Teacher

Produced JANUARY 2006

Secondary school teachers may be generalists or subject area specialists who provide instruction to young people in junior and senior high school (Grades 7 to 12).

NOC Number(s): 4141
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S I D**

Duties

In general, secondary school teachers:

- identify student's individual and collective learning needs
- plan and deliver instruction based on student learning needs and special needs
- provide a stimulating learning environment in which each student can experience growth and develop to his or her potential
- help students learn appropriate knowledge, skills and attitudes.

Secondary classes vary in size and are made up of students who represent a broad range of abilities, interests, needs and problems. Teachers use various instructional techniques to maintain student interest and maximize individual learning within a group teaching environment.

In addition to preparing and presenting lessons, secondary school teachers:

- evaluate and communicate student progress
- prepare and implement remedial programs for students requiring extra help
- meet with other professionals to discuss individual student needs and progress
- volunteer to supervise extra-curricular and after-school activities
- attend meetings, seminars and in-service training sessions.

Most of these additional duties occur after regular school hours and add considerable length to the working day. Some teaching specializations may concentrate on preparation and organization, while others may involve more marking or extra-curricular involvement.

Secondary teachers in large urban schools often teach many classes in only one or two subject areas. In smaller rural schools and schools with a generalist approach, secondary teachers are required to teach a broader range of subjects and grades.

Academic specialists teach core courses such as English language arts and math. They prepare and present academic course content in a clear and creative way by using techniques and materials designed to motivate students. Their duties also may include:

- laboratory preparation and the maintenance of laboratory materials
- working with individuals or small groups of students who require additional help.

In addition to second languages taught as specific subjects, many schools offer language immersion programs at various levels. Bilingual and multilingual teachers may teach academic subjects in languages other than English.

English as a second language (ESL) teachers work with immigrant children whose English skills are insufficient for the regular classroom. The objective of an ESL program is to integrate students into mainstream classes by:

- providing students with the necessary English vocabulary
- assisting students with communication skills and strategies
- helping students adjust to Canadian society.

Fine arts teachers are usually artists and performers in their own fields. For more information, see the Dancer, Instrumental Musician, Painter/Printmaker, Singer and Sculptor occupational profiles.

Career and technology studies teachers are usually specialists in their fields. For more information, see the Career and Technology Studies Teacher occupational profile.

Physical Education teachers work toward producing a desirable level of physical fitness and motor skill development in their students through recreational activities such as:

- indoor and outdoor games
- individual, dual and team sport activities
- rhythmics and dance
- tumbling and gymnastics
- aquatics.

Working Conditions

Secondary teachers spend most of their working day instructing classes. They may teach 150 or more students a day. The work can be demanding, requiring a great deal of physical, mental and emotional energy. Many hours are spent out of class working with individual students and preparing lessons and marking assignments.

Most secondary schools are well-equipped, attractive facilities with up-to-date audio-visual, language laboratory, computer and scientific equipment.

Personal Characteristics

Secondary school teachers need the following characteristics:

- a genuine interest in and respect for young people
- enthusiasm for their subject areas
- the ability to be creative, imaginative, patient, energetic and resourceful
- good mental, emotional and physical health
- tolerance and an appreciation of diverse cultures
- the ability to establish rapport and enjoy contact with the public, especially parents
- strong leadership qualities and a good sense of humor
- a clear, pleasant speaking voice
- excellent written and verbal communication and presentation skills.

They should enjoy finding different ways to solve questions and present information, and organizing and co-ordinating the work of others.

Educational Requirements

In Alberta, the minimum qualification required to teach in a secondary school is four years of post-secondary education leading to a **Bachelor of Education (B.Ed.) degree**. The following post-secondary institutions offer B.Ed. degree programs.

- **Canadian University College** in College Heights offers a four year B.Ed. program with a specialization in secondary education. The admission requirement is a high school diploma or equivalent with an average of at least 60 per cent in English Language Arts 30-1 (or English 30), Pure Math 30 and two other 30 level courses, preferably laboratory sciences.
- **Red Deer College** offers a four year B.Ed. degree program with a specialization in middle school (Grades 4 to 9) in collaboration with the University of Alberta. The admission requirement is successful completion of the first two years of the B.Ed. elementary program or completion of an approved degree program. Admission to this program is limited to the 40 applicants who have the highest grade point average.
- The **University of Alberta** in Edmonton offers B.Ed. degree, joint degree and after-degree programs through the Faculty of Education and the Faculte Saint-Jean. The admission requirement for the Faculty of Education is one year of pre-professional studies (usually in Arts, Science, Human Ecology or Physical Education) including 24 units of transferable course weight to the student's B.Ed. major. Admission to pre-professional studies programs generally requires a competitive average in English Language Arts 30-1 (or English 30), three 30 level humanities or science subjects, and one other approved 30 level subject. The admission requirement for the Faculte Saint-Jean program is the same except that 30 level French is specifically required.
- The **University of Calgary** offers B.Ed. after-degree and combined degree programs in secondary education. Students take three years in General Studies, Fine Arts, Kinesiology or Science, then transfer to Education for the remaining two years of a five year combined degree program. The admission requirement for General Studies is a high school diploma or equivalent with a competitive average in English Language Arts 30-1 (or

English 30), Pure or Applied Math 30 (or Math 31), and three of the following: Biology 30, Chemistry 30, Physics 30, Social Studies 30, Science 30, or one five-credit Grade 12 subject (French 30, 30S or 30N recommended).

- The **University of Lethbridge** offers combined degree and after-degree B.Ed. programs. The admission requirement for the after-degree program is a GPA of at least 2.5/4 in a bachelor's degree program with a major in a school subject. Students are admitted to the Faculty of Education after two or three years of university studies. Admission requirements for combined degree programs depend on the combined degree desired. The basic entrance requirement is an average of at least 65 per cent in English Language Arts 30-1 (or English 30), three 30 level subjects (math or science courses may be required or recommended) and a fifth Grade 12 subject.

Secondary education students in B.Ed. programs must choose at least two subject areas of concentration.

The University of Calgary and the University of Lethbridge have an established quota for their program and the University of Alberta has an enrollment management program where applicants compete for entrance into the Faculty based on their major field of study and grade point average. The number of successful applicants and entrance requirements may vary from year to year. Competition for admission is keen and universities give preference to those who have had previous experience working with children in a leadership capacity. Valuable experience can be obtained from:

- playground supervision
- day care work
- hospital volunteering
- amateur sports coaching
- teacher assistant work
- working with youth in organized groups.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's School Act and Certification of Teachers Regulation, elementary and secondary school teachers must be certified by Alberta Education.

Employment and Advancement

Secondary teachers are employed in:

- public and separate schools
- private schools
- hospitals
- vocational schools and colleges.

With experience and further education, secondary school teachers may advance to positions such as:

- department head
- co-ordinator of a particular subject area in a large school or school system
- specialists in departments of education, universities or school districts
- school administration (vice-principal, assistant principal, principal).

In Alberta, people employed as secondary school teachers work in the **Educational Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Educational Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

In large urban centres, the supply of secondary school teachers is generally greater than the demand. To find employment, beginning teachers may:

- relocate to smaller, rural or northern communities

- work as supply (substitute) teachers.

Over 16,750 Albertans are employed in the Secondary School Teachers occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 210 to 390 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Since teachers' salaries and benefits are determined by negotiated agreements between school boards and their teachers, salaries vary from one board to another. However, all teachers are paid according to a grid system based on their number of years of university training and number of years of teaching experience.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Secondary School Teachers occupational group working part-time or full-time earned from **$23,400 to $100,600 a year.** The average salary was **$64,700 a year.**

All teachers employed in Alberta's publicly supported schools are members of the Alberta Teachers' Association (A.T.A.) and are automatically included under the Alberta Teachers' Pension Plans Act. Collective agreements negotiated by the A.T.A. on behalf of Alberta's teachers provide a range of benefits, including:

- life and disability insurance
- extended health care coverage
- vision and dental insurance
- professional improvement leave opportunities.

Holidays and pensions are specified by provincial legislation. However, many teachers use the summer break period of July and August, Christmas and spring break holidays for professional development or for fulfilling additional professional responsibilities.

Security Alarm Installer

Produced DECEMBER 2003

Security alarm installers install and maintain electronic security alarm systems for homes, businesses and industrial properties.

NOC Number(s): 2242
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I M**

Duties

In general, security alarm installers:

- check the installation site, read the work order and check drawings to determine locations for specified equipment
- lay out wiring routes and cut openings in walls, floors and frames using hand and power tools
- mount raceways or conduits, pull wires through and splice them
- install motion sensors and other types of intruder and alarm devices
- program security systems by using computers and special software (on site or by telephone)
- test systems using equipment such as multimeters
- demonstrate systems for customers and explain the cause and seriousness of false alarms
- trouble-shoot malfunctions and make the necessary adjustments or repairs
- prepare documents such as invoices, warranties and installation and repair records.

Working Conditions

Security alarm installers work in environments that vary from clean, comfortable homes and businesses to cold, dusty buildings under construction. Some travel from job-site to job-site is required.

A standard 40-hour work week is the norm, although occasional overtime may be required during busy periods. For customer convenience, security alarm installers may work some evenings and weekends.

Safety precautions are required to avoid injuries when working with power tools and electricity, and hard hats and steel-toed boots are required on construction sites. Lifting up to 10 kilograms may be required.

Personal Characteristics

Security alarm installers need the following characteristics:

- good motor co-ordination and manual dexterity
- normal colour vision
- mechanical aptitude and good spatial perception
- good communication and interpersonal skills for dealing with customers and other workers
- the ability to present a positive and professional image of their company.

They should enjoy using tools and equipment to perform tasks requiring precision, trouble-shooting problems and working with little direction or supervision.

Educational Requirements

In Alberta, security alarm installers are **trained on the job.** Employers generally prefer to hire job applicants who have a high school diploma, a background in electronics or building construction, and a valid driver's licence. Some computer knowledge is an asset. A security clearance check is generally required.

High schools, colleges, private vocational schools and technical institutes throughout the province offer courses in electronics. When there is sufficient demand and funding available, the **Canadian Alarm and Security Association (CANASA)** offers Alarm Technician Levels I and II courses in various locations across Canada. Applicants must be bondable (acceptable to bonding companies as responsible, law-abiding people), and have a high school diploma with *English, mathematics and physics courses (or equivalent qualifications).*

The **British Columbia Institute of Technology (BCIT)** in Burnaby offers a 28-week Security Alarm Installer certificate program. Admission to the program requires a high school diploma (or equivalent) with at least a C in Math 11 (Math 20 in Alberta), or a passing grade on an entrance test which assesses math and reading skills. A security clearance may be required prior to final acceptance into the program.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Security alarm installers must be willing to study on an ongoing basis to keep up to date with new developments in electronics.

Other Requirements

In some provinces, certification is required to work in this occupation. Some municipalities (e.g. the city of Calgary) require security alarm installers to be licensed.

Employment and Advancement

(section revised JANUARY 2006)

Security alarm installers are employed by security alarm companies which range in size from local operations to national chains. A growing number of installers work on a contract basis.

Experienced security alarm installers may advance to lead installer and supervisor positions. They may also set up their own businesses or move into other jobs in the company such as sales or customer service positions.

Security alarm installers are part of the larger National Occupational Classification 2242: Electronic Service Technicians (Household and Business Equipment). In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Management, Administrative and Other Support Services**
- **Repair, Maintenance, Personal and Other Services**
- **Retail Trade**
- **Wholesale Trade**
- **Educational Services**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 10,650 Albertans are employed in the Electronic Service Technicians (Household and Business Equipment) occupational group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 200 to 310 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since security alarm installers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for security alarm installers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Electronic Service Technicians (Household and Business Equipment) occupational group working part-time or full-time earned from **$14,200 to $81,100 a year.** The average salary was **$44,200 a year.**

Security Guard

Produced APRIL 2003

Security guards protect an organization's property, personnel and information against fire, theft, vandalism and illegal entry.

NOC Number(s): 6651
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M s d**

Duties

Specific duties vary depending on the area of employment. For example, security guards may work at shopping centres, banks, sports facilities, airports, conventions, parking lots, construction sites or in public buildings such as hospitals, museums and art galleries. In general, security guards:

- patrol an assigned area
- check doors, windows, locks and building interiors for signs of damage or theft
- provide information, guide traffic or respond to complaints and maintain order
- watch for intruders, sometimes through the use of electronic surveillance systems
- observe and keep records of security-related activities.

In case of fire or the presence of unauthorized persons, the security guard sounds an alarm or telephones the supervisor, fire department or police. In some situations, security guards may make arrests.

The following types of security work involve being outside and driving.

- In **patrol car service,** a security guard, alone or accompanied by a dog or another guard, patrols construction sites, buildings, property, etc. as a daily or nightly routine.
- In **mobile patrol,** security guards respond to alarms from businesses, residences and schools. If an actual break and enter is detected, they contact police.
- In **camp or construction site guard service,** security guards patrol and do gate clearance work at large construction sites or plants. This work may be seasonal, with more opportunities for employment during the summer months.

Inspectors visit work sites to ensure that security employees are performing their duties.

Working Conditions

Security guards may:

- work indoors or outdoors in all weather conditions.
- stand most of the time or sit at work stations monitoring electronic security systems.
- work in teams or work alone for extended periods of time.
- work in uniform or plain clothes.

Most security guards work shifts that include weekends and holidays. Many work evening and night shifts. Guards who work during the day often must deal with the public.

Security guards may be required to routinely lift items weighing up to 10 kilograms.

Personal Characteristics

This type of work appeals to people who enjoy having clear rules and guidelines for their work, dealing with people from diverse backgrounds and controlling access to facilities.

Educational Requirements

(section revised DECEMBER 2005)

Most employers prefer to hire people who have at least high school education. Some security agencies have no minimum education requirements; however, they do require applicants to:

- speak and write English
- be 18 years of age or older
- have good character references and no police record
- be in good health.

Some companies require that guards have valid first aid and CPR certificates, a valid driver's license and their own mode of transportation.

Most security guards are trained on the job. However, having some related training prior to employment is a definite asset, particularly for later advancement. Being able to communicate in a second language is also an asset.

The **Canadian Society for Industrial Security** offers three non-progressive levels of certification for security guards:

- Certified Security Officer
- Certified Security Supervisor
- Certified Security Professional

In Alberta, the following post-secondary institutions offer security-related programs.

- **Columbia College**, a private vocational school in Calgary, offers Criminal Justice Certificate and Diploma programs. These programs may be taken as 25-week full-time programs or 50-week part-time programs. The entrance requirements for the Certificate program include a high school diploma with at least 60 per cent in English 30 and Math 30 or equivalent, a successful interview and a criminal record check.
- **Grant MacEwan College** in Edmonton offers a two year Police and Security diploma program with a specialization in Investigations and Security Management. The entrance requirement is a high school diploma or equivalent with at least 65 per cent in English 30 (or at least 75 per cent in English 33 or a skills assessment). A criminal record check and fitness test are required.
- **Hilltop Security Academy**, a private vocational school in Calgary and Edmonton, offers a 12-week Private Security Professional program. Applicants must have adequate oral and written communication skills, a clear ciminal records check and 33 credits toward an high school diploma (Grade 10) with English 10 or Math 10 or equivalent.
- **Lethbridge Community College** offers a one year Risk Management Certificate program. The entrance requirement is a high school diploma or equivalent. Applicants are required to take a computerized placement test, complete a questionnaire and attend an interview with a faculty member. A medical examination and eyesight/colour vision testing are recommended.
- **Medicine Hat College** offers a two year Police and Security diploma program. The entrance requirements include a high school diploma with at least 60 per cent in English 30 or equivalent, and completion of a Standard First Aid and CPR certificate. An interview and program orientation are required and a physical fitness test may be required. This program is offered in partnership with Grant MacEwan College.
- **NorQuest College** in Edmonton offers a 40-week Aboriginal Policing and Security certificate program. Applicants must be at least 19 years old and have successfully completed a Grade 10 English and Math or equivalent. A valid driver's licence, fitness assessment and medical exam are also required.
- **Northern Lakes College** in Grouard offers a 10-month Aboriginal and Community Policing certificate program. Applicants must be at least 19 years old and have successfully completed English 23 and Math 13 or Applied Math 10 or equivalent. A valid driver's licence, criminal record check, fitness assessment, medical exam and personal interview are also required. Graduates of this program may apply for credit toward police and security programs at Lethbridge Community College, Grant MacEwan College or Athabasca University.
- The **University of Alberta** Faculty of Extension offers an eight course Security Management program. The entrance requirement is a high school diploma or equivalent.
- The **University of Calgary** Faculty of Continuing Education offers a 300 hour Security Management program. Applicants must have a high school diploma, be over 23 years of age and have suitable business experience.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Prospective students should consult employers regarding program suitability and reputation before enrolling in a post-secondary education program. For information about related degree programs, see the Police Officer occupational profile.

Other Requirements

Under the Private Investigators and Security Guards Act, security guards who work on a contract basis must be licensed by the Alberta Solicitor General. Fingerprints are checked with municipal police departments or the Royal Canadian Mounted Police.

Employment and Advancement

(section revised JANUARY 2006)

Security guards are employed by:

- private guard service companies
- governments
- retailers
- construction companies
- industrial plants
- hospitals
- other public and private building owners

Experienced security guards may advance to supervisor, manager or inspector positions.

Security guards are part of the larger National Occupational Classification 6651: Security Guards and Related Occupations. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Public Administration**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 10,750 Albertans are employed in the Security Guards and Related Occupations group which is expected to grow 1.8 to 2.8 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 190 to 310 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since security guards form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for security guards.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Employment propects are best for those who have their own transportation and are willing to work night shifts.

Salary

(section revised OCTOBER 2005)

Salaries for security guards vary widely depending on the responsibilities of the position and the type of employer.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Security Guards and Related Occupations group working part-time or full-time earned from **$10,900 to $32,700 a year.** The average salary was **$19,600 a year.**

Seed Cleaning/Conditioning Plant Manager

Produced MARCH 2005

Seed cleaning/conditioning plant managers operate plants that remove weed seed, foreign material and other contaminants from seed, and may upgrade seed to improve the quality of the product.

NOC Number(s): 8252
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O M i**

Duties

In general, seed cleaning plant managers:

- unload grain from growers' vehicles
- weigh the grain and record the type and amount
- discuss the services to be provided with producers
- operate cleaning (conditioning) equipment, bin grain and load trucks or supervise staff who perform these functions
- identify weed seed and supervise purity control
- arrange for outside seed testing (e.g. germination)
- maintain equipment and arrange for repairs as needed
- clean the plant
- maintain financial and operational records.

In plants that retail seed, seed treatments and other goods, managers also have sales and customer service duties or supervise others who perform these functions.

Working Conditions

Working conditions around seed plants can be dusty and noisy, but technological improvements have reduced this problem. Safety precautions must be observed to avoid injury when operating machinery and equipment.

Some of the work involves manual labour but the amount of lifting required varies with the type of facility. At plants that bag seed, plant managers may be required to lift bags weighing up to 25 kilograms. Minimal lifting is required at plants that do not bag seed.

Personal Characteristics

Seed cleaning plant managers need the following characteristics:

- initiative and self-discipline
- good organizational skills
- excellent communication skills
- the ability to work well with others
- good problem solving and decision-making skills
- mechanical skills
- the ability to pay close attention to details.

They should enjoy using machinery and equipment, taking a methodical approach to co-ordinating and maintaining records, and negotiating with farmers and farm managers.

Educational Requirements

Seed cleaning plant managers must be knowledgeable about:

- crop types and grades
- the Canada Seeds Act and related regulations
- weed seeds
- seed-treating chemicals.

Since they are responsible for operating a business with very few employees, they also need a working knowledge of:

- how to set up and adjust seed cleaning equipment
- bookkeeping
- relevant computer applications
- public relations
- labour and safety laws and regulations
- mechanics (for maintaining and cleaning equipment).

There are **no formal educational requirements** for working in a seed cleaning plant. However, employers may prefer to hire job applicants who have related post-secondary education.

In Alberta, the following colleges offer related post-secondary programs:

- **Lakeland College** in Vermilion
- **Lethbridge Community College**
- **Olds College**.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Seed cleaning plant managers who dispense pesticides must be licensed by Alberta Environment. Those who clean pedigree seed must be certified by the Canadian Seed Institute.

Employment and Advancement

(section revised JANUARY 2006)

Seed cleaning plant managers usually start as operators in seed cleaning plants. With on-the-job experience, they may be promoted to managing operator or manager.

Experienced seed cleaning plant managers may become grain elevator managers or representatives for agribusiness companies (e.g. chemical or seed sales representatives).

Seed cleaning plant managers are part of the larger National Occupational Classification 8252: Agricultural and Related Service Contractors and Managers. In Alberta, over 75 per cent of people employed in this classification work in the **Agriculture** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Agriculture industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 400 Albertans are employed in the Agricultural and Related Service Contractors and Managers occupational group which is expected to grow up to 0.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since seed cleaning plant managers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for seed cleaning plant managers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Seed cleaning/conditioning plant managers earn from **$40,000 to $70,000 per year (2005 estimate).**

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Agricultural and Related Service Contractors and Managers occupational group working part-time or full-time earned an average salary of **$47,100 a year**.

Seismic Observer

Produced SEPTEMBER 2005

Seismic observers operate geophysical recording instruments used in seismic field tests and perform routine maintenance to ensure optimum data quality.

NOC Number(s): 2212.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M i**

Duties

Before oil companies decide to drill a well in a new location, they usually require information from seismic tests to analyze the underground rock formation and its potential for holding reserves of oil or gas. A great deal of time and money is spent on seismic operations and major decisions are made on the basis of seismic data.

The size of a seismic crew varies with the nature of the job but the crew usually consists of a large team of specialists (for more information, see the Seismic Workers occupational profile).

In general, seismic observers:

- operate, maintain and are responsible for the expensive electronic equipment used to record seismic signals
- perform daily and monthly instrument tests, and ensure all equipment meets tolerance specifications
- troubleshoot problems and repair recording equipment
- document recording operations
- ensure the quality of recorded data at the field level
- supervise the work of line truck drivers and as many as thirty helpers as they prepare areas for seismic tests.

During seismic tests, observers work in a recording truck and use two-way radios to direct the work of crew members involved in the tests. In some cases, observers activate the explosives used in tests or direct the work of shooters who activate explosives from a different location.

Senior observers may be responsible for supervising overall seismic operations in the absence of the party manager.

Working Conditions

Seismic crew members should be able to lift items weighing up to 25 kilograms. They do a lot of travelling and often spend extended periods of time away from home, living and working in close contact with a limited number of people.

Personal Characteristics

Seismic observers need the following characteristics:

- the ability to work effectively in a team
- good organizational skills
- an interest in working outdoors (in some cases, in isolated locations).

They should enjoy working with instruments and equipment at tasks requiring precision, compiling data and assisting in technical functions.

Educational Requirements

Many companies provide on-the-job training and safety training for seismic crew members. Employers generally prefer to hire applicants who have previous experience on a seismic crew or experience with:

- farm equipment
- mechanical devices

- heavy equipment
- electronic equipment.

To advance to senior positions such as seismic observer, training in a related **engineering technology or mechanics** is a definite asset. For information about related post-secondary education programs, see the Geological and Geophysical Technologist, Electronics Engineering Technologist, Petroleum Engineering Technologist, and Mechanical Engineering Technologist occupational profiles.

Employment and Advancement

(section revised JANUARY 2006)

Seismic observers are employed by:

- geophysical companies
- oil companies
- independent data processing companies.

Companies specializing in seismic work and oil companies involved in seismic work are listed in the Yellow Pages of the telephone directory under Geophysical Services.

Individuals on seismic crews usually start as helpers. After gaining experience, they may advance to other positions: vibrator operator, shooter, observer, surveyor or driller. Eventually, they may advance to party manager, responsible for co-ordinating the activities of the seismic crew. Party managers:

- organize the seismic operation, crew and equipment
- make the necessary arrangements to prepare locations
- supervise the activity of seismic crews
- ensure that safe work procedures are followed
- handle any major problems that may arise
- keep field supervisors informed about the progress of seismic operations.

Seismic observers are part of the larger National Occupational Classification 2212: Geological and Mineral Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classsification work in the following industries:

- **Oil and Gas Extraction**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 3,600 Albertans are employed in the Geological and Mineral Technologists and Technicians occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since seismic observers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for seismic observers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Geological and Mineral Technologists and Technicians occupational group working part-time or full-time earned from **$21,300 to $117,000 a year.** The average salary was **$56,700 a year.**

© Government of Alberta, Human Resources and Employment

Seismic Worker

Produced SEPTEMBER 2005

Seismic workers conduct seismic tests in which controlled explosions or vibrations create sound waves in the earth's surface and geophysical instruments record seismic data.

NOC Number(s): 8615
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M O i**

Duties

Before oil companies decide to drill a well in a new location, they usually require information from seismic tests to analyze the underground rock formation and its potential for holding reserves of oil or gas. A great deal of time and money is spent on seismic operations and major decisions are made on the basis of seismic data.

The size of a seismic crew varies with the nature of the job but the crew usually consists of a large team of specialists.

Seismic drillers drill bore holes for the explosive charges that create underground shocks for seismic tests. In general, seismic drillers and their helpers:

- transport the equipment required for a drilling operation
- keep continual logs of drilling activity
- load holes with explosives.

Shooters organize the shooting equipment used to set off explosions, and control the shoot and the blasting zone. In general, shooters and their helpers:

- drive and maintain the trucks that contain shooting equipment
- load holes with explosives (when not already loaded by drillers)
- direct helpers and others in laying electrical cables and connecting explosive charges
- monitor equipment during the test
- ensure that safety precautions are followed
- maintain an accurate inventory of explosives
- report any irregularities in shooting procedures and shot point conditions to the seismic observer.

During seismic tests, shooters are in constant contact with observers (for more information, see the Seismic Observer occupational profile). Explosives may be set off from controls in the shooting truck or the recording truck.

Vibrator operators operate vibrating units that are sometimes used instead of explosives to create energy waves in the ground. The vibrator unit is mounted on a medium-sized truck buggy or tracked vehicle that has a large plate attached underneath. When the plate is dropped or vibrated, it creates energy waves in the ground that reflect back to the surface. Often, up to four vibrating units are operated at one time.

In general, vibrator operators:

- organize the placement of equipment
- operate and maintain vibrator equipment
- handle and adjust controls to position the vibrating plate
- co-ordinate activities with seismic observers
- sometimes drive fuel trucks.

Senior vibrator operators may supervise the work of the vibrator crew or repair equipment as required.

Helpers are inexperienced people in training positions on seismic crews. After they gain skills and experience, helpers may move to other positions on a crew.

- Recording helpers, often called jug hustlers, assist seismic observers. In preparation for recording activities, observers may require as many as twenty or more helpers to haul cables, geophones and other recording equipment, and place and connect recording equipment.

- Shooter helpers work under the direction of shooters. In general, they:
  - carry and place explosives (under the direct supervision of a licensed blaster)
  - tamp charges
  - guard the area during shooting activities
  - assist shooters in overall operations.

Three-dimensional seismic work and heliportable operations require more equipment and much larger crews including staging managers, line crew bosses and trouble-shooters.

Staging managers (sometimes called staging equipment co-ordinators):

- keep inventories of the equipment being used
- set up and organize staging sites
- organize the deployment of personnel and equipment during heliportable operations.

Line crew bosses (sometimes called line truck drivers):

- supervise line crew personnel
- drive and maintain the trucks used to transport personnel and equipment to and from field operations
- co-ordinate crew members boarding and exiting helicopters
- arrange the safe and orderly transport of equipment
- place signage along roadways when necessary.

Trouble shooters work directly under observers and deal with equipment failures. With 3-D seismic work so much equipment is used that several trouble shooters are required to maintain them.

Working Conditions

Seismic workers may be required to:

- lift items weighing up to 25 kilograms
- walk long distances through varied terrain
- work outdoors in all types of weather conditions
- travel in small aircraft or helicopters
- spend extended periods of time away from home, living and working in close contact with a number of people.

Personal Characteristics

Seismic workers need the following characteristics:

- the ability to adapt to a number of different environments (mountains, plains)
- the ability to work effectively in a team
- an interest in working outdoors (sometimes in isolated locations).

They should enjoy having clear rules and guidelines for their work, and operating and maintaining equipment.

Educational Requirements

Seismic workers must have a valid driver's licence. There are **no formal, minimum education requirements** for the position of helper on a seismic crew. However, a high school education and an interest in mathematics, physics and geology are definite assets. Employers generally prefer to hire job applicants who have experience with:

- farm equipment
- mechanical devices
- heavy equipment
- electronic equipment.

Employers provide on-the-job training and safety training.

To advance to more senior positions on a seismic crew, work experience or post-secondary training in an engineering technology, electronics or mechanics is a definite asset. For information about related post-secondary education programs, see the Geological and Geophysical Technologist, Petroleum Engineering Technologist, Electronics Engineering Technologist and Mechanical Engineering Technologist occupational profiles.

Employment and Advancement

(section revised JANUARY 2006)

Seismic workers are employed by:

- geophysical companies
- oil companies
- independent data processing companies.

Companies specializing in seismic work and oil companies involved in seismic work are listed in the Yellow Pages telephone directory under Geophysical Services.

Seismic crew members usually start as helpers. After gaining experience, they may advance to line boss or trouble-shooter positions, then to shooter or vibrator operator positions, before moving up to staging co-ordinator and junior observer positions. Experienced seismic crew members who prefer indoor positions may move into positions in data processing centres that process seismic data.

Seismic workers are part of the larger National Occupational Classification 8615: Oil and Gas Drilling, Servicing and Related Labourers. In Alberta, most people employed in this classification work in the **Oil and Gas Extraction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Oil and Gas Extraction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 7,950 Albertans are employed in the Oil and Gas Drilling, Servicing and Related Labourers occupational group which is expected to grow 3.0 to 4.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 230 to 320 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since seismic workers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for seismic workers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Oil and Gas Drilling, Servicing and Related Labourers occupational group working part-time or full-time earned from **$16,400 to $120,500 a year.** The average salary was **$47,000 a year.**

OCC info Alberta Occupational Profiles

Alberta Human Resources and Employment

Service Rig Personnel

Produced JULY 2005

Oil and gas well service rig personnel perform general labourer duties on service rigs and operate specialized equipment to service, complete and abandon wells.

NOC Number(s): 8412.1
Minimum Education: Less than high school
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O M d**

Duties

Service rig personnel include floorhands, derrickhands and service rig operators. In general, their work involves:

- lowering and raising equipment to pull up broken tubing, casing and pump rods
- lowering and raising testing instruments or special servicing tools such as fishing tools or paraffin scraping devices.

Floorhands spend a lot of time working on the rig floor. There often are two floorhands on a service rig crew. In general, floorhands:

- operate the elevator and tongs
- assist other members of the service crew as needed
- clean and maintain equipment
- perform housekeeping duties (keep the lease area tidy, scrub or paint around the rig).

Derrickhands work high above the rig floor on a platform called a monkeyboard or use a harness and platform climbing device to get to the proper position on the derrick to:

- guide lengths of pipe, instruments and tools as they are being raised from or lowered into the hole
- steady items while they are being connected and disconnected.

When they are not up in the derrick, derrickhands:

- listen to pumps that circulate workover fluid and check them regularly for vibration or other problems
- maintain and repair mud tanks and related equipment
- prepare mud reports and instruct the crew handling chemical additives
- inspect the derrick before it is raised or lowered
- assist operators (see below)
- help train new and junior crew members.

Service rig operators ensure that crews do their jobs safely and efficiently. They report directly to service rig managers and are responsible for the crew when the rig manager is not present. In general, service rig operators:

- operate hoisting equipment control panels
- monitor the progress of operations
- keep records
- train crew members
- introduce new procedures that may help the crew to work more safely and effectively.

Working Conditions

Working conditions vary depending on rig locations and weather conditions. Service rig personnel work outdoors, often year round in remote locations, exposed to extremes in weather as well as to the dirt, dust, noise and fumes common around rigs.

Hours of work and the number of crews involved depend on well site location and the types of service required. Service rig crews usually work 12 hour day shifts that include commuting time to and from work. Occasionally, rig locations are remote enough that crews operate out of a camp or stay at a nearby hotel, and work rotating 12 hour shifts to keep the rig running 24 hours a day.

The work is physically demanding and may involve lifting items that weigh over 25 kilograms. Workplace hazards include working on wet, slippery rig floors, working near or with heavy tools and moving machinery, and exposure to chemical substances such as paint, motor oil and drilling mixture substances. Service rig crew members must follow standard safety practices and participate in safety meetings and emergency procedure drills.

Personal Characteristics

Service rig personnel need the following characteristics:

- physical strength, stamina and agility
- emotional stamina
- an interest in working outdoors and in remote areas
- the ability to work quickly, think ahead to the next procedure and respond appropriately in emergency situations
- the ability to get along well with co-workers.

They should enjoy having clear rules and guidelines for their work, working with equipment and machinery, and working in a team environment.

Educational Requirements

Service rig personnel acquire the skills and knowledge they need by learning on the job and taking courses.

Employers require applicants to be at least 18 years of age, have a driver's license and have some high school education. High school graduation is not required for employment as a floorhand but may be an asset for further advancement.

Enform (formerly Petroleum Industry Training Service and Canadian Petroleum Safety Council) in Calgary and Nisku (near Edmonton) offers courses for service rig crew members and pre-employment courses for people who want to gain a better understanding of the work environment before working in the industry.

Employers generally provide a safety orientation program and may provide technical classroom instruction for interested employees. New crew members are required to have first aid and H2S Alive certification (hydrogen sulphide training). Employers also may require crew members to take Fall Arrest, Waste Hazardous Material Information System (WHMIS) or additional driver training. Some service rig personnel need a Special Oil Well Operator Certificate for working with boilers.

Employment and Advancement

(section revised JANUARY 2006)

Service rig personnel are employed by oil and gas well service contractors. Some service rigs operate year round but employment is often seasonal.

The most important requirements for advancement are on-the-job training, experience and the ability to learn new things quickly. Floorhands may advance to derrickhand and service rig operator positions, or they may move into well service equipment operator positions. A conscientious, hard working individual who has good leadership skills can advance to a rig manager position.

Not everyone is capable of becoming a good derrickhand. Individuals who do not feel comfortable working in high places do not usually move into this position. However, those wishing to advance to senior positions must have a good understanding of the derrickhand's duties.

Service rig personnel are part of the larger National Occupational Classification 8412: Oil and Gas Well Drilling Workers and Services Operators. In Alberta, most people employed in this classification work in the **Oil and Gas Extraction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Oil and Gas Extraction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

Over 10,350 Albertans are employed in the Oil and Gas Well Drilling Workers and Services Operators occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 250 to 370 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since service rig personnel form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for service rig personnel.)

Salary

(section revised OCTOBER 2005)

In October 2005, the Canadian Association of Oilwell Drilling Contractors (CAODC) published the following base wage **recommendations**:

- $22.40 an hour for floorhands
- $24.80 an hour for derrickhands
- $28.20 an hour for operators
- $12 an hour for travel time.

When they are working away from home, service rig crew members are paid an additional living or subsistence allowance of $45 or $55 a day depending on the location of the rig.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Oil and Gas Well Drilling Workers and Services Operators occupational group working part-time or full-time earned from **$24,800 to $257,000 a year.** The average salary was **$60,100 a year.**

OCC*info* Alberta Occupational Profiles

Alberta Human Resources and Employment

Set Designer

Produced FEBRUARY 2004

Set designers design and plan the creation of settings, scenic environments and properties (props) for theatre, dance, opera, television, video and film productions.

NOC Number(s): 5243.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M D**

Duties

Duties and responsibilities vary from one type of production to another but, in general, set designers:

- read and analyze the script and consult with the director and others to develop design concepts
- research architectural styles and building interiors appropriate to the time period depicted
- research stylistic elements such as paintings and art objects
- propose concepts that may include the use of metaphorical, psychological or mythological approaches
- share their research and concepts with other designers
- develop detailed working drawings, sketches (colour renderings) and/or three-dimensional models to communicate design ideas and requirements
- work within budget, labour and space restrictions
- select materials and supervise the construction and painting of sets and props
- attend rehearsals and oversee the integration of set design with performance.

Most set designers are required to supervise the construction and painting of sets and, in small theatres, to help with these activities as well.

Working Conditions

Set designers often work long hours to meet deadlines. Most work on a freelance basis and work out of their homes or studios during the creation phase of a production. Later, they may work indoors or outdoors to supervise set construction.

Personal Characteristics

Set designers need the following characteristics:

- creativity and artistic vision
- flexibility
- the communication and interpersonal skills required to work effectively with others and market their ideas or services.

They should enjoy synthesizing information, experimenting and finding innovative solutions to problems, doing precise work with tools and equipment, and supervising the work of others.

Educational Requirements

Set designers must be able to interpret scripts and written texts into visual images, and convert those images into functional set designs. This requires:

- a working knowledge of artistic principles (e.g. colour and composition), theatre history, art history, architecture and historical interiors
- an understanding of the principles of interior design and construction
- a sense of architectural style
- drawing, painting and modelling skills

- the ability to draft working drawings and produce renderings.

Training in the following is essential: drafting, computer aided drafting and design, freehand drawing, painting and model making.

This is a very specialized field: a bachelor's degree or master's degree in fine art with a specialization in set design, or training at a specialized conservatory such as the National Theatre School of Canada is recommended.

In Alberta, many post-secondary institutions offer performance arts programs (for more information, see the Actor, Dancer and Instrumental Musician occupational profiles), some offer programs specifically related to broadcasting or film production (see the Film Director occupational profile) and some offer interior design programs (see the Interior Designer occupational profile). The following institutions offer fine art programs in technical production:

- During the summer months, the **Banff Centre for the Arts** offers Theatre Production and Design programs for people who already have related training and experience. The Centre also offers Theatre Production Residencies in electrics, properties, scenic construction and scenic painting. Applicants must submit a resume, and a statement of learning objectives.
- **Grant MacEwan College** in Edmonton offers a two year Theatre Production diploma program. The entrance requirement is a high school diploma with English 30 (or at least 75 per cent in English 33).
- **Mount Royal College** in Calgary offers a two year Theatre Arts diploma program with a technical stream. The entrance requirement is a high school diploma, and an audition or interview.
- **Red Deer College** offers a two year Theatre Studies diploma program with a specialization in technical production. The entrance requirement is a high school diploma with English 30.
- The **University of Alberta** in Edmonton offers a four year Bachelor of Fine Art degree program in theatre design. The entrance requirement is an average of 65 to 80 per cent in English 30 and four of the following: Biology 30, Chemistry 30, Pure Math 30, Math 31, Physics 30, Social Studies 30, Science 30, 30-level languages other than English, one fine arts subject. A portfolio, assigned design project and three letters of reference are also required. The University of Alberta also offers a Master of Fine Arts degree program in theatre design.
- The **University of Lethbridge** offers a four year BFA degree program in drama with a design/technical major. The entrance requirement is an average of at least 60 per cent in English 30, three other appropriate 30 level subjects and a fifth Grade 12 subject.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Set designers work for:

- theatre companies
- film and television production companies
- opera and dance companies
- festivals.

Some theatre companies employ resident designers but most set designers work as freelancers and negotiate contracts for specific projects. Therefore, aspiring set designers need to acquire related experience and develop a portfolio of their work. Working for amateur theatre companies or cable television stations provides valuable experience.

Graduates of design programs usually start as designers for smaller productions or as assistant set designers in larger ones. Advancement generally takes the form of more demanding assignments. Some set designers teach at universities and colleges.

Set designers are part of the much larger National Occupational Classification 5243: Theatre, Fashion, Exhibit and Other Creative Designers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Information, Culture and Recreation**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting funding for the arts
- **location** in Alberta

- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 600 Albertans are employed in the Theatre, Fashion, Exhibit and Other Creative Designers occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since set designers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for set designers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Most set designers work on a contract basis. Their incomes therefore vary considerably from one designer to another and from one year to another.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Theatre, Fashion, Exhibit and Other Creative Designers occupational group working part-time or full-time earned from **$13,100 to $106,500 a year.** The average salary was **$28,900 a year.**

Sheet Metal Worker

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Sheet metal workers design, fabricate, assemble, install and repair sheet metal products.

NOC Number(s): 7261
Minimum Education: Apprenticeship Trade
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M I**

Duties

Sheet metal workers use many types of metal including black and galvanized steel, copper, brass, nickel, stainless steel, aluminum and tin plate to make products such as:

- pollution control systems, dust collection and control systems, air-slides, grain spouts, material blowers, air-veyors and other air systems
- heating, ventilating and air conditioning systems
- solar heating and cooling systems
- metal showcases, display neon and metal signs
- metal cabinets, custom built tables, counters and fixtures for hospitals, kitchen equipment and items for the food service and beverage industry
- electrical panels and related equipment
- dairy, brewery and laboratory equipment
- metal shelving, lockers, window frames, metal doors and frames, toilet partitions
- flashing, coping, troughing and roof drainage systems
- custom or small fabrication runs of sheet metal items.

On occasion, sheet metal workers substitute fibreglass or plastic for metals.

Duties vary from one position to another but, in general, sheet metal workers:

- lay out, measure and mark dimensions and reference lines on sheet metal according to drawings or templates
- use laser or plasma cutting equipment, numerically-controlled or computerized equipment, hand and power shears and snips and light metal-working equipment to cut, drill or punch, bend and shape sheet metal
- fasten components together with bolts, screws, cement, rivets, adhesives or solder or by welding
- install and repair sheet metal products and ensure installations conform to specifications and building codes
- do metal cladding of insulated piping and equipment on industrial sites
- make and install flashing, coping for roofing applications
- supply, install, service and repair air handling equipment, furnaces, fans and air terminal devices.

Sheet metal workers may work from verbal instructions or blueprints, or design small jobs themselves.

Working Conditions

Sheet metal workers make some products in a shop before and install them at construction sites. Other products such as roofing and siding have to be measured and cut at the construction site. Shops may be noisy and outdoor work must be done in all types of weather. Considerable bending, reaching, working at heights or in cramped spaces may be required. A 40-hour work week is normal, but overtime may be required to meet construction deadlines.

Sheet metal workers may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Sheet metal workers need the following characteristics:

- mechanical aptitude

- good eyesight and hand-eye coordination
- spatial and form perception
- manual dexterity
- the ability to visualize a finished product from a drawing
- physical strength and stamina
- the abilility to work in awkward and noisy places
- patience, dependability and accuracy.

They should enjoy taking a methodical approach to ensure products conform to specifications while still maintaining a high degree of accuracy.

Educational Requirements

To work in Alberta, sheet metal workers must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have Alberta Math 20 or 23, Pure Math 20 or Applied Math 20 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Sheet metal workers need a good background in practical math, geometry and blueprint reading.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,425 hours of on-the-job training and ten weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Sheet metal worker apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- the Northern Alberta Institute of Technology (NAIT) in Edmonton
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Most sheet metal workers are employed by sheet metal, air conditioning and heating contractors involved in residential, commercial and industrial construction. A few are self-employed or work in shops with related trades. Some are employed by roofing contractors to install flashing and coping.

Experienced sheet metal workers may become specialists in design and layout work or in estimating the cost of installations. They may advance to supervisory positions, or go into business for themselves. Alberta certified journeyman sheet metal workers who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, over 75 per cent of people employed as sheet metal workers work in the **Construction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Construction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,050 Albertans are employed in the Sheet Metal Workers occupational group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice sheet metal workers earn at least 50 per cent of the journeyman wage rate in their place of employment in the first year, 65 per cent in the second, 75 per cent in the third and 85 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$18 to $32 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Sheet Metal Workers occupational group working part-time or full-time earned from **$21,400 to $82,800 a year.** The average salary was **$53,100 a year.**

Shipper and Receiver

Produced OCTOBER 2005

Shippers and receivers wrap, pack and unpack, store, ship, receive and record the movement of parts, supplies, materials, equipment and stock to and from retailers, wholesalers, manufacturing companies, and other commercial and industrial organizations.

NOC Number(s): 1471
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O d**

Duties

Shippers and receivers' duties vary depending on the size and nature of the organization. In small companies, one shipper and receiver may be responsible for all shipping and receiving. In larger organizations, responsibilities may be divided among several shippers and several receivers.

In general, shippers and receivers perform the following tasks or supervise others who perform these tasks:

- determine the least expensive and quickest method of shipment, arrange delivery, and prepare bills of lading, invoices and other shipping documents
- assemble containers and crates, pack goods to be shipped and attach packing slips (identifying information and shipping instructions)
- direct delivery trucks to shipping doors or designated marshalling areas, and help load and unload goods safely
- inspect and count items received, check them against invoices or other documents, record shortages and reject damaged goods
- unpack and store goods in the appropriate storage areas
- comply with transportation of dangerous goods legislation
- keep accurate records of items received and where they are stored
- retrieve stored items and trace lost shipments as needed
- conduct regular safety inspections, maintain safe working conditions, report safety hazards and ensure safety equipment is in good working order.

Depending on the employer, shippers and receivers also may:

- operate forklifts, hand trucks or other materials-handling equipment
- type address labels or use computers to create shipping labels and perform record-keeping functions
- use special barcoding devices to put number codes on items and retrieve information from codes
- prepare customs declarations and export documents
- call customers or carriers to co-ordinate pick-up and delivery, or have inventory items inspected
- inspect received goods, fill out forms for damaged and returned items, and route them correctly
- contact vendors to resolve problems or contact service depots to arrange for repairs
- order replacement items.

Working Conditions

Shippers and receivers work mostly indoors, usually in warehouses which may be noisy or hot/cold when loading doors are open. They may work outdoors on loading platforms or at ground level to prepare larger items for shipping or storage.

Shippers and receivers spend most of their time on their feet. Depending on the nature of the goods handled, they may be required to routinely lift items weighing up to 25 kilograms. They use hand trucks or other equipment to move heavier items. For occupational health and safety reasons, shippers and receivers may be required to wear protective gear such as steel-toed footwear, hard hats or ear protectors. Some wear company uniforms.

Most shippers and receivers work 40 hours, five days a week. In large warehouses, they may work shifts.

Personal Characteristics

Shippers and receivers need the following characteristics:

- the physical strength and stamina required to lift and move goods repeatedly
- the ability to write legibly or type well enough to enter items on forms or computers
- good organizational skills
- the ability to work well with others
- a courteous, helpful attitude.

They should enjoy having clear rules and organized methods for their work, operating equipment such as computers and fork lifts, and overseeing loading and unloading activities.

Educational Requirements

Shippers and receivers are **trained on the job** and must continue acquiring new skills to keep up with technological advances.

Although there is no standard minimum education requirement, most employers prefer to hire high school graduates or graduates of related training programs. Computer and warehouse experience, or knowledge of Workplace Hazardous Materials Information System (WHMIS) and Transportation of Dangerous Goods (TDG) regulations are definite assets. Training in rigging procedures is important for shippers and receivers who are required to hook up lifting devices.

In Alberta, the following sources offer warehousing programs:

- **Alberta Apprenticeship and Industry Training** offers a training program leading to an Alberta Occupational Certificate. For more information, see the Warehousing Professionals occupational profile.
- **Calgary Board of Education Chinook Learning Services** in Calgary offers an eight course Warehousing certificate program. Applicants must be at least 17 years of age and Canadian citizens or landed immigrants. Basic math and reading skills are required.
- **Northern Alberta Institute of Technology** in Fairview offers a Warehouse Training Certificate of Proficiency program by non-distance and distance education. The entrance requirement for Level 1 of the program is English 10 or 13 and Grade 10 math, or equivalent.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Most shipping and receiving jobs are in urban centres where manufacturers, wholesalers and large retailers locate their warehouses. In small establishments, shippers and receivers may have additional duties such as cleaning, stocking shelves or filing. In some large organizations, union membership is a requirement of employment.

With additional education or training, shippers and receivers may move into related occupations such as warehousing or parts technician (for more information, see the Parts Technician and Warehousing Professionals occupational profiles). In some organizations, shippers and receivers also may move into positions in other parts of the organization (e.g. junior buyer positions).

In Alberta, over 75 per cent of people employed as shippers and receivers work in the following industries:

- **Wholesale Trade**
- **Retail Trade**
- **Transportation and Warehousing**
- **Other Manufacturing**
- **Food and Beverage Products Manufacturing**
- **Metals, Metal Fabrication and Machinery Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 12,000 Albertans are employed in the Shippers and Receivers occupational group which is expected to grow 1.1 to 2.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 130 to 260 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Shippers and Receivers occupational group working part-time or full-time earned from **$12,000 to $97,800 a year.** The average salary was **$28,600 a year.**

Sign Language Interpreter

Produced MARCH 2005

American Sign Language (ASL) - English interpreters facilitate communication among deaf, hard of hearing and hearing people, using both English and ASL.

NOC Number(s): 5125.3
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M I s**

Duties

The process of interpreting is the same regardless of the languages involved. A message from one language and cultural context must be expressed accurately in another language and cultural context. An interpreter's goal is to make this transition without changing meaning.

Sign language interpreters provide communication services in a variety of settings including:

- meetings and appointments in business, legal, medical and social service offices
- educational settings
- religious services and ceremonies
- musical and theatrical performances
- conferences and workshops.

Interpreters working in educational settings must read all course materials and texts beforehand to become familiar with course terminology, and preview any audio/visual materials used in the course. ASL-English interpreters working in school settings may interpret:

- for teachers and students in the classroom and in labs
- during parent/teacher interviews
- at tutorial sessions
- in other situations (e.g. when deaf students wish to use support services, participate in extra-curricular activities or attend school meetings).

Interpreters must follow a strict code of ethics that states, in part, that all information must remain strictly confidential. Everything that is spoken or signed is interpreted. Interpreters do not counsel, advise or interject their personal opinions.

Working Conditions

Working environments and hours depend on the job and assignment. Interpreters working for interpreter referral services or agencies may interpret at a doctor's office one day and, depending on their qualifications, interpret in court the next day. Or, they may interpret for television or in front of large crowds at conferences or banquets.

Depending on the length of the assignment, number of clients and complexity of the task, interpreters may work in teams to reduce the risk of repetitive strain injuries such as carpal tunnel syndrome.

Freelance interpreters work irregular hours. Typically, they charge a two hour or half-day minimum and require 48 hours notice of cancellation.

Personal Characteristics

Sign language interpreters need the following characteristics:

- a nonjudgemental attitude
- the ability to maintain client confidentiality
- excellent interpersonal and communication skills
- flexibility

- objectivity
- physical stamina
- self-discipline.

Interpreters should enjoy the process of interpreting and facilitating communication.

Educational Requirements

Those interested in becoming ASL-English interpreters **must be fluent in English and American Sign language (ASL).**

Although certification is not required, employers generally prefer to hire interpreters who have experience in the deaf community or related post-secondary education, and are certified by the Association of Visual Language Interpreters of Canada (AVLIC) or the Registry of Interpreters for the Deaf (RID) in the United States.

In Alberta, ASL classes are offered through the continuing education departments of post-secondary institutions and local schools. Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

ASL-English interpreters may be employed by institutions, work on a freelance basis or work for interpreter referral services. Interpreters in educational settings may work in elementary, secondary and post-secondary schools, and in schools for the deaf. Interpreters who have business or administrative skills may be hired to co-ordinate interpreting services for agencies, schools (especially post-secondary institutions) or conventions and other short-term assignments.

Freelance interpreters may find that there is less work available during the summer months.

Sign language interpreters are part of the larger National Occupational Classification 5125: Translators, Terminologists and Interpreters. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Educational Services**
- **Information, Culture and Recreation.**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 700 Albertans are employed in the Translators, Terminologists and Interpreters occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since sign language interpreters form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for sign language interpreters.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Incomes and benefits vary considerably in this occupation. Most interpreters are paid per hourly rate, often by an interpreter service or agency.

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Translators, Terminologists and Interpreters occupational group ranged from **$17,100 to $33,700 a year.** After three years, salaries ranged from **$35,800 to $41,900**. The average salary was **$35,600 a year.**

Singer

Produced MAY 2003

Singers perform musical arrangements as soloists or members of vocal groups or choirs.

NOC Number(s): 5133.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M i d**

Duties

Singers perform for live audiences and in recording studios. They usually specialize in particular types of music (popular, country, jazz, concert, recital, oratorio or opera).

The careers of classically trained singers who perform mostly opera, musical theatre, chamber music and choral music are quite different from those of singers who perform popular music such as rock, country, blues and jazz. Popular singers need business and entrepreneurial skills as well as talent. Hit songs can have a fairly short life and singers may work for years without finding commercially successful songs.

Singing for many artists is more than just having a good voice; it is a lot of hard work as well. In addition to rehearsing and performing, popular singers:

- look for new material that fits their particular style and could be added to their live performances or next recordings
- audition or prepare and submit audition tapes to obtain work
- work with business agents or managers to find work and negotiate contracts.

Classical singers specialize in a particular voice type (e.g. soprano, contralto, tenor, baritone, bass). In addition to rehearsing, performing and looking for work, they must:

- learn new music (often written in other languages)
- research particular roles to find out more about the character they are portraying or the period of history in which the piece is set
- work with vocal coaches to rehearse for upcoming stage roles
- learn fencing, acting and dancing as required for dramatic singing roles.

All singers must practice daily to maintain the elasticity of their voices throughout their singing careers. If they know the repertoire well, rehearsals may only take a short time; however, if singers must learn new repertoire or new roles (e.g. in an opera or musical) practice sessions may take several weeks or months.

Recording sessions for radio commercials and film soundtracks require singers to sight read their parts. They often have to learn new pieces of music within two or three takes.

Working Conditions

Singers work primarily in larger centres where recording studios are usually located and most concert productions are staged. They work long hours, day and evening, rehearsing and performing. Most performances are in the evenings and on weekends.

Singers must be prepared to travel wherever work is available. To promote new recordings, they may go on national or regional tours.

Personal Characteristics

Singers need the following characteristics:

- vocal talent and a discerning ear for music
- ambition, self-discipline and the ability to handle criticism and rejection

- good communication skills
- good health and stamina
- a dramatic stage presence and the ability to sense the mood of an audience and respond accordingly
- the ability to work under pressure
- the ability to work with a variety of people
- a good memory for music.

They should enjoy studying and rehearsing music, diverting and entertaining audiences, and developing their own style.

Educational Requirements

(section revised JANUARY 2006)

Like most other artists, singers need good business sense and an understanding of how to promote themselves to agents and managers.

Singers must learn to entertain. Entering amateur competitions, recitals and music festivals as early as possible provides practice at performing in front of an audience. Because the voice changes during adolescence, many singers wait until later to commit themselves to a career in singing. Learning to play an instrument provides good grounding in sight reading and ear training. Although many popular singers have little formal music training, there is a growing trend for professional contemporary singers to pursue formal technical training.

Finding a singing teacher who is competent and well versed in either classical or popular styles is important. Singing lessons are offered by various music conservatories, independent teachers and post-secondary music departments. Courses in other areas of music such as accompanying, arranging, composing and music theory are useful too.

It is not necessary to have a degree or diploma in music to become a singer. However, the comprehensive music education offered in post-secondary programs can be very valuable. In Alberta, the following post-secondary institutions offer music programs with voice-related specializations:

- **Alliance University College** in Calgary offers a four year BA in Music. The entrance requirement is five senior matriculation level courses including English and math with an minimum overall average of 60 per cent.
- **Banff Centre for the Arts** offers a variety of short term music programs in vocal performance. Admission is based on an audition and an interview. Participants must have spent time in formal studies or in the music profession.
- **Canadian Nazarene University College** in Calgary offers a three and four year BA in Music. The entrance requirement is a high school diploma with a minimum average of at least 60 per cent in five Grade 12 subjects including English, and math or a second language.
- **Grant MacEwan College** in Edmonton offers a two year Music diploma program with a performance specialization. The emphasis in this program is on jazz and commercial music. The entrance requirement is a high school diploma or equivalent, and a skills appraisal.
- **Mount Royal College** in Calgary offers a two year Music Performance diploma program with a specialization in vocal music. The entrance requirements are a high school diploma or equivalent, performance skills equivalent to Grade 10 Conservatory, an audition and a placement test in music theory, history and keyboard.
- **Red Deer College** offers a two year Music diploma program with a specialization in performance. The entrance requirements are a high school diploma with English 30 or 33 or equivalent, an audition and an examination.
- **University of Alberta** in Edmonton offers four year degree programs and five year combined degree programs in Music. The Bachelor of Music program has a specialization in performance (voice). The entrance requirement is a high school diploma with an average of at least 72 per cent in English 30 and four of the following subjects: a 30-level language other than English, a second 30-level language other than English, Biology 30, Chemistry 30, Physics 30, Math 30, Pure Math 30, Math 31, Science 30, one approved Fine Arts subject. An audition, music rudiments exam and aural skills exam are required. The University of Alberta in Camrose also offers bachelor degree programs in music.
- **University of Calgary** offers a four year degree program with a specialization in performance (voice). The entrance requirements are a high school diploma with an average of at least 72 per cent in English 30 and four of the following subjects: Social Studies 30, Pure Math 30, Applied Math 30, Math 31, Biology 30, Chemistry 30, Physics 30, Science 30, a 30-level language other than English, Music 30 or one five credit Grade 12 subjects. An audition and interview are also required.
- **University of Lethbridge** offers four year degree programs and five year combined degree programs with an applied specialization including studio courses. The entrance requirement are an average of at least 65 per cent in English 30, three other appropriate 30-level subjects and a fifth Grade 12 subject, an appropriate music background and an audition.

For a complete listing of Alberta post-secondary institutions that offer music programs, see the Instrumental Musician occupational profile.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Singers from both popular and classical backgrounds may work in:

- concert halls, churches and theatres as soloists or as part of a group
- radio and television studios (doing commercials)
- recording studios
- festivals, national expositions or other large cultural events
- musical theatre and operas.

Popular music singers often start out singing at school dances in a band. They may sign on with a booking agent who, for a percentage of the contract, finds them work in bars and clubs. Classical singers may have fewer options available for singing contracts. Because singing is not always a full-time occupation, singers often have other jobs as well.

Singers need to build their reputations by building mass appeal on recordings or with live audiences. It also helps to develop contacts with music directors, music agents, conductors, songwriters and music producers.

Singers are part of the larger National Occupational Classification 5133: Musicians and Singers. In Alberta, most people employed in this classification work in the following industries:

- **Educational Services**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 3,950 Albertans are employed in the Musicians and Singers occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 90 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since singers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for singers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

The market for classical singers is small and very competitive, especially for female singers.

Salary

(section revised OCTOBER 2005)

Performers or their agents negotiate fees for live performances with owners or managers. Therefore, singers' incomes can fluctuate dramatically, depending on how much work there is available.

Singers may belong to different unions and associations that set wage scales. Singers involved in recording, live performances and commercials may belong to the American Federation of Musicians of the United States and Canada. Singers in musical theatre and in operas may belong to the Canadian Actors Equity Association. Singers performing for film, television and radio may belong to the Alliance of Canadian Cinema, Television and Radio Artists.

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Musicians and Singers occupational group earned **up to $47,500 a year.** Those with three years of experience earned from **$16,500 to $39,700.** The average salary was **$33,000 a year.**

Social Worker

Produced DECEMBER 2005

Social workers help individuals, families, groups, communities and organizations develop the skills and resources they need to enhance their social functioning and social environments.

NOC Number(s): 4152
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S I D**

Duties

Specific duties and client populations vary from setting to setting. Social workers may work in:

- family counselling agencies providing assessment, counselling, treatment and referral services to individuals and their families in areas such as parenting and marriage counselling
- health care teams in hospitals, mental health clinics or home care agenices
- community health teams working with patients and family members to overcome emotional, behavioural, social and financial difficulties
- correctional services working with youth and adult offenders
- the education system providing counselling and consultation services for students, parents and teachers
- government social service departments delivering social policy and advocacy programs such as income support programs, child protection programs, childcare programs or foster care and adoption programs
- community agencies developing prevention and intervention programs to meet community needs (for example, addressing problems such as homelessness, family violence, addictions, racism)
- residential settings providing counselling, role modeling, crisis intervention, assessment, advocacy and referral services for children, adolescents, people with disabilities or the elderly
- employment assistance programs and private agencies providing employment-related assessment, counselling, treatment and referral services
- program development, organizational development and evaluation
- social research, planning and advocacy organizations
- community and economic development with disadvantaged groups
- international social work in developing countries
- settlement and immigration services for new Canadians
- providing assessment and counselling services, training seminars or services related to policy development, program planning, evaluation and research.

Working Conditions

Working conditions vary widely. Social workers often must divide their time between face-to-face contact with clients and completing assessments, case studies/plans and reports. Direct practice may include interviewing clients in their homes, family counselling sessions, group work, attending meetings and co-ordinating services with other helping professionals and community agencies.

Positions involved in community work, health care, advocacy, crisis intervention and investigation, and counselling sessions, seminars and workshops may require evening or weekend work.

Personal Characteristics

Social work is a demanding profession requiring:

- maturity and emotional stability
- high energy
- patience

- sensitivity to and an understanding of beliefs and values not your own
- good communication skills
- critical thinking skills and good judgement
- integrity
- resourcefulness.

Social workers should enjoy working with and counselling people, finding innovative solutions to problems and taking responsibility for their work.

Educational Requirements

Social workers must have a diploma, bachelor's degree or master's degree in social work. Some employers require a minimum of a Bachelor of Social Work (BSW) degree. Other requirements may include a criminal record check, a valid driver's license and the use of a vehicle.

In Alberta, the following institutions offer two year diploma programs in social work:

- **Grant MacEwan College** in Edmonton
- **Maskwachees Cultural College** in Hobbema and Edmonton, and through **Blue Quills First Nations College** in St. Paul
- **Mount Royal College** in Calgary and through **Medicine Hat College**
- **Northern Lakes College** in Slave Lake
- **Portage College** in Lac La Biche
- **Red Deer College**

Entrance requirements for these programs vary but generally include a high school diploma or equivalent with specified minimum marks in English Language Arts 30-1 or English 30, or equivalent. Social Studies 30 may be recommended or required. Other requirements may include a minimum age, related volunteer work or life experience, references, a criminal record check and a Child Welfare Information System check (if required by a field practicum agency).

The **University of Calgary** offers a BSW degree program in Calgary, Edmonton, Lethbridge, Grande Prairie and various rural and remote aboriginal communities. To apply for admission to this program, students must meet the basic admission requirements for the University of Calgary and specific requirements for different routes in the program. A minimum 2.3/4 grade point average (GPA) is required. The basic admission requirement for the University of Calgary is a high school diploma or equivalent with an average of at least 70 per cent in English Language Arts 30-1 or English 30 and four other appropriate Grade 12 subjects. Applicants for the program may be University of Calgary transfer students, other transfer students, Alberta social work diploma graduates or after-degree students.

The University of Calgary also offers MSW and PhD programs in social work. The entrance requirement for the master's degree program is an accredited BSW or any other bachelor's degree with at least two years of experience (volunteer or paid) in the social service field, and a grade point average (GPA) of at leat 3.0/4.

University transfer programs are offered by colleges and universities located throughout the province. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit by the University of Calgary.

Distance education programs are offered by post-secondary institutions outside of Alberta.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Health Professions Act and Social Workers Profession Regulation, registration with the Alberta College of Social Workers (ACSW) is mandatory if you meet identified educational requirements and provide professional services directly to the public, teach the practice of the profession to members or students of the profession, or supervise registered members who provide services to the public. Registered members who are authorized by the College perform restricted activities defined in the Regulation. Only registered members may use the protected titles Social Worker or Registered Social Worker.

Employment and Advancement

(section revised JANUARY 2006)

Social workers are employed by:

- government departments

- school boards
- community health and social service agencies
- hospitals and long term care organizations
- mental health clinics
- family and social service agencies
- employee assistance programs
- correctional services and agencies
- aboriginal band councils
- non-profit community agencies.

Social workers may advance to supervisory or administrative positions based on their level of education and work experience. Or, social workers may go into private practice in their areas of specialization. Those who have graduate degrees may move into post-secondary teaching and research positions.

In Alberta, over 75 per cent of people employed as social workers work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 5,500 Albertans are employed in the Social Workers occupational group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 100 to 160 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for social workers vary considerably depending on the employer and the worker's qualifications.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Social Workers occupational group working part-time or full-time earned from **$17,800 to $105,500 a year.** The average salary was **$48,700 a year.**

© Government of Alberta, Human Resources and Employment

Sociologist

Produced NOVEMBER 2005

Sociologists systematically study and analyze human societies. They use distinct sociological perspectives to understand and explain the causes and consequences of social interaction.

NOC Number(s): 4169.8
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I D M**

Duties

Sociologists carry out sociological research. They use various theoretical approaches and research methods (for example, historical studies, surveys, interviews, experiments, document analyses or observational studies) to examine:

- the nature of the relationship between the individual and society
- the attitudes, values and behaviour of people in groups (e.g. families, schools, racial and ethnic communities, workplaces, cities, rural locales, health care organizations, sports venues)
- the development and structure of groups, organizations and institutions (for example, law, education, marriage, religion)
- behavioural patterns and relationships (for example, patterns of dating, gender roles, prison life, workplace behaviours)
- areas of social concern such as crime, immigration, poverty, unemployment, health, aging, social injustice and population change
- social policy and legislation and its effects on society (for example, envrionmental policy, employment policy, same-sex marriage legislation, anti-terrorism legislation)
- aspects of social change such as cultural change, urbanization, changes in family lifestyles, globalization, science and technology, as well as organized efforts to change the direction of social life such as the women's movement, aboriginal movement, gay/lesbian movement, anti-racism movement, environmental movement, peace movement and anti-globalization movement.

Sociologists conduct studies, review journal articles and demographics, analyze information, identify social trends and interpret research data to increase our understanding of human social behaviour.

Working Conditions

Sociologists spend most of their time in office, classroom, library and computer laboratory environments. They spend many hours reading, analyzing data and writing reports. They also may teach or give public presentations relating to their work.

Sociologists sometimes travel to gather information in the field. They may visit a wide variety of settings such as workplaces, child care centres, busy downtown street corners, sports arenas, low-income housing complexes, ethnic communities, health care institutions or penitentiaries.

Personal Characteristics

Sociologists need the following characteristics:

- an interest in studying human interaction and social life
- good communication skills
- good organizational skills
- the ability to set aside their own convictions and analyze behaviour objectively.

They should enjoy organizing and integrating information to find innovative solutions to problems, and consulting with people.

Educational Requirements

Sociologists generally have a master's or doctoral degree in sociology. The entrance requirement for master's and doctoral degree programs is above average standing in the last two years of a four year bachelor's degree program, preferably an honours program.

Three year and four year degree programs which may include courses in sociology are offered by a number of post-secondary institutions across Alberta. The following institutions offer four year bachelor's degree programs specifically in sociology:

- **Athabasca University** offers a four year BA program in Sociology by distance education. Applicants must be at least 16 years of age.
- **Red Deer College** offers a BA program in Sociology in collaboration with the University of Calgary. Students must successfully complete a university transfer program before applying for admission to this program.
- The **University of Alberta** in Edmonton offers BA and BA (Honours) degree programs in Sociology, a BA degree program in Criminology, and MA and PhD programs in Sociology. Augustana Faculty in Camrose offers four year BA and B.Sc. programs in Sociology. The entrance requirement for the bachelor's degree programs is a competitive average (65 to 80 per cent) in English Language Arts 30-1 (or English 30), a 30 level language other than English or Pure Math 30 (or Math 30), and three other approved 30 level subjects (Social Studies 30 recommended). Students may apply to the honours program or the Criminology program after one year of university studies.
- The **University of Calgary** offers BA, BA (Honours), five year co-op BA degree programs and MA and PhD programs in Sociology. The entrance requirement for the bachelor's degree programs is a high school diploma or equivalent with a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 or Math 30 or 31, and three of the following: Biology 30, Chemistry 30, Physics 30, Science 30, Social Studies 30, a 30 level language other than English, one five-credit Grade 12 subject.
- The **University of Lethbridge** offers BA, BA (Honours), Bachelor of Arts and Science programs, a five year combined degree programs and a MA program in Sociology. The entrance requirement for the bachelor's degree programs is an average of at least 65 per cent in English Language Arts 30-1 (or English 30), three other appropriate 30 level subjects and a fifth Grade 12 subject.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Sociologists are employed by:

- consulting, marketing and polling firms
- federal, provincial and municipal governments
- universities and colleges
- large corporations.

A doctoral degree is generally required to teach and conduct research at the post-secondary level. Some sociologists are self-employed consultants who work on a contract basis for private industry and government departments.

Sociologists are part of the much larger National Occupational Classification 4169: Other Professional Occupations in Social Science. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Educational Services**
- **Health Care and Social Assistance**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)

- **size of the occupation.**

Over 350 Albertans are employed in the Other Professional Occupations in Social Science occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since sociologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for sociologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries vary considerably in this field depending on the employer, the responsibilites of the position and the sociologist's qualifications.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Professional Occupations in Social Science occupational group working part-time or full-time earned from **$31,800 to $79,600 a year.** The average salary was **$54,900 a year.**

University professors may earn up to $140,000 a year (2005 estimate).

© Government of Alberta, Human Resources and Employment

Software Engineer

Produced JULY 2004

Software engineers research, design, evaluate, modify, integrate, test and maintain software applications, technical environments, operating systems, embedded software, information warehouses and telecommunications software.

NOC Number(s): 2173
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I M D**

Duties

Software engineers design, develop and evaluate software such as business and engineering applications, process control systems and systems software. This may involve developing re-usable software that can be adapted for more than one application. In some cases, they develop special purpose embedded software for inclusion in products such as washing machine controls and automobile engines. Their work involves:

- consulting with system users and analyzing user requirements
- developing design specifications
- developing strategies to assure fault tolerance and system security
- designing software products and user interfaces
- producing software designs
- modifying existing software to correct errors, adapt to new hardware, increase performance or upgrade user interfaces
- testing and validating programs prior to installation
- installing programs and analyzing performance
- maintaining programs once they are in use
- integrating with legacy systems and third party systems.

They also may be responsible for:

- preparing proposals for information systems
- integrating and testing system software and hardware components
- writing product documentation
- providing cost analyses and obtaining quotes from suppliers
- determining system performance standards
- managing software projects
- assisting in the marketing and sale of software
- supervising the work of technical staff.

Software engineers must constantly update their knowledge and skills to keep up with rapid advancements in computer technology. They often work as members of design teams which may include programmers, hardware engineers, technologists, technicians and marketing and manufacturing specialists.

Working Conditions

Software engineers spend most of their time in office environments using computer terminals. They may be required to work a considerable amount of overtime and experience a great deal of pressure to meet deadlines.

Personal Characteristics

Software engineers need the following characteristics:

- excellent oral and written communication skills
- the ability to work effectively in a team environment
- a capacity for details
- good decision-making and problem-solving skills
- an aptitude for mathematics and science
- the ability to teach others
- good time-management skills
- an appreciation of the value of a tidy program style.

They should enjoy being innovative, and performing tasks that require precision and a systematic approach.

Educational Requirements

Software engineers must have a **four year degree in software engineering or a related discipline** such as electrical engineering or computer science. Some employers hire only software engineers who have a master's degree in engineering. A doctoral degree is generally required for a career in research and development.

The **University of Alberta** in Edmonton and the **University of Calgary** offer four year Bachelor of Science (B.Sc.) degree programs in computer and electrical engineering. The minimum admission requirement is a high school diploma with an overall average of 78 or 80 per cent in the following Grade 12 subjects:

- English 30
- Pure Math 30
- Math 31
- Chemistry 30
- Physics 30.

Programming experience at the high school level is an asset. The first year of studies is a common year of study for all engineering disciplines. Students specialize in computer engineering in the second, third and fourth years.

Both universities offer co-operative education/internship programs in engineering that consist of periods of academic study alternating with periods of planned work experience in industry. Students usually take five years to complete these programs.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Engineer. You do **not** have to be registered if you work under the direct supervision of a Professional Engineer and do not call yourself a Professional Engineer.

Information Systems Professional is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself an Information Systems Professional, you must be a registered member of the Canadian Information Processing Society of Alberta (CIPS Alberta). You do **not** have to be registered if you do not call yourself an Information Systems Professional.

Employment and Advancement

(section revised JANUARY 2006)

Software engineers are employed by:

- companies that devise embedded software for inclusion in other products
- companies that develop industrial instrumentation and process control products
- consulting companies that provide software-related services

- manufacturing companies
- companies in the energy sector (e.g. oil and gas companies)
- educational institutions
- governments
- research institutions
- software manufacturers
- Internet-based businesses
- software marketing companies.

Working in smaller companies requires a broader range of skills. Duties with larger companies may be more specialized.

With experience, software engineers can move into other engineering disciplines, become private consultants or operate their own businesses. They can also move into supervisory positions and management positions. Those who wish to advance in management may need additional training in business administration.

Software engineers are part of a larger computer engineers occupational group. In Alberta, over 75 per cent of people employed as software engineers work in the following industries:

- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Public Administration**
- **Other Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,250 Albertans are employed in the Software Engineers occupational group which is expected to grow 2.7 to 3.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 60 to 90 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since software engineers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for software engineers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Software Engineers occupational group working part-time or full-time earn from **$34,300 to $118,500 a year.** The average salary was **$73,900 a year.**

© Government of Alberta, Human Resources and Employment

Soil Scientist

Produced SEPTEMBER 2005

Soil scientists study the composition, distribution, development and behaviour of soils and the interaction of soils with soil organisms, animals and plants.

NOC Number(s): 2115.2
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

Soil scientists study the effects of people's activities on soil, develop methods to conserve and manage soil, and develop plans to remediate (fix) contaminated and disturbed soils. Their duties and responsibilities vary considerably from one job to another. In general, they:

- identify soils on the basis of soil properties, horizons, geographic locations, land use and landscape position
- conduct experiments to investigate how soils form, change and interact with land-based ecosystems and living organisms
- plan and supervise land conservation and reclamation programs for industrial development projects
- study soil chemistry to determine chemical composition, concentrations, toxicity, movement and reactions with pollutants
- study soil biology to determine organic matter content and quality, microbial activity and the effects of organic matter loss
- study soil fertility and plant nutrient levels in soils for crop production
- study physical properties such as soil permeability, water-holding capacity, porosity and aggregate stability, and their effects on plants and soil organisms
- identify degraded soils and develop plans to improve their chemical, biological and physical characteristics
- study the effects of continuous cropping, direct seeding and other soil conservation practices and develop improved soil management practices for farmers and forestry companies
- survey undisturbed and disturbed lands for classification, inventory, mapping, environmental impact assessments, environmental protection planning and conservation and reclamation planning
- plan and supervise waste management programs for composting and farming
- review soil assessments and conservation and reclamation plans
- devise and develop new fertilizers
- assist in the development of improved measurement techniques, soil conservation methods, soil sampling devices and related technology
- prepare applications for regulatory approval and provide advice regarding the development of regulatory standards for land reclamation and soil conservation
- communicate research and project results to other professionals and the public and teach related courses, seminars or workshops.

Working Conditions

Soil scientists may work outdoors in the field or indoors in laboratories and offices. They generally work a standard work week but often spend additional time reading to keep up to date. Private consultants may work very long hours.

Some soil scientists travel in an assigned territory or to other regional, national or international research sites.

Personal Characteristics

Soil scientists need the following characteristics:

- the ability to communicate well, both in person and in writing, with the public and others who use soils (e.g. engineers, wildlife biologists, land use planners, farmers)
- the intellect, curiosity, creativity, patience and perseverance required to solve complex problems and keep up to date with new developments in the field
- the ability to work well independently or as part of a team
- the health and stamina required for field work.

They should enjoy:

- synthesizing information to investigate problems
- using laboratory and field instruments and equipment to perform tasks requiring precision
- supervising the work of technologists and technicians.

Educational Requirements

The minimum education requirement for a soil scientist is a bachelor's degree in agriculture, forestry, biological, earth or environmental sciences with a specialization in soils. Research positions require a related master's or doctoral (PhD) degree. The entrance requirement for most master's degree programs is an acceptable average in a related four year bachelor's degree program. In addition, soil scientists must know provincial and federal legislation as it relates to their work.

In Alberta, the following institutions offer four year bachelor's degree programs with a specialization in soils:

- The **University of Alberta** in Edmonton offers four year Bachelor of Science (B.Sc.) degree programs in Agriculture, Environmental and Conservation Sciences, Environmental and Conservation Sciences/Native Studies Combined, and Forestry. The entrance requirement is a minimum average of 65 to 80 per cent in English Language Arts 30-1 or English 30, Pure Math 30 or Math 30, Biology 30, Chemistry 30 and one other approved 30-level subject. The University of Alberta also offers an Earth and Atmospheric Sciences program with a specialization in environmental earth sciences as well as master's and doctoral degree programs related to soil science. The entrance requirement for the Earth and Atmospheric Sciences program is a minimum average of 65 to 80 per cent in English Language Arts 30-1 or English 30, Pure Math 30 or Math 30, Physics 30, Chemistry 30 and one other approved 30-level subject.
- The **University of Calgary** offers four year B.Sc. degree programs in Earth Science and Environmental Science. The entrance requirement for both programs is a high school diploma with a competitive average in English Language Arts 30-1 or English 30, Pure Math 30, Chemistry 30 and two other approved Grade 12 subjects. Math 31 and Physics 30 are recommended for the Earth Science program. Math 31 is recommended for the Environmental Science program and Biology 30 is required for the biological sciences concentration in Environmental Science.
- The **University of Lethbridge** offers four year B.Sc. degree programs in Agricultural Studies, Geography, and Environmental Science. The entrance requirement for these programs is an average of at least 65 per cent in English Language Arts 30-1 or English 30, Biology 30, Chemistry 30 and Pure Math 30 or Math 30 plus a fifth Grade 12 subject. The univeristy also offers post-diploma degree programs in Agricultural Studies and Environmental Science for graduates of related post-secondary diploma programs (minimum grade point average required).

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Soil scientists are employed by:

- post-secondary education institutions
- federal, provincial and municipal government departments
- fertilizer companies
- engineering and land appraisal firms

- coal, oil, gas and forestry companies
- consulting firms.

New graduates may work on a seasonal basis until they gain experience. A doctoral degree is usually required to direct and administer research programs or teach at the university level.

Salary increases and more demanding projects are the most tangible forms of advancement in this occupation. Advancement opportunities to administrative and supervisory positions are limited. Some soil scientists set up their own consulting firms and work on a contract basis.

Soil scientists are part of the larger National Occupational Classification 2115: Other Professional Occupations in Physical Sciences. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 100 Albertans are employed in the Other Professional Occupations in Physical Sciences occupational group which is expected to grow up 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since soil scientists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for soil scientists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Professional Occupations in Physical Sciences occupational group working part-time or full-time earned from **$35,800 to $103,700 a year.** The average salary was **$79,100 a year.**

OCC info Alberta Occupational Profiles

Alberta Human Resources and Employment

Songwriter

Produced MAY 2003

Songwriters may compose both the melody and the lyrics (words) to a song or write only the words.

NOC Number(s): 5132.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M d**

Duties

Songwriters write songs for particular events, for particular artists or for particular mediums (e.g. musical theatre, radio advertising, film or television). They may be lyricists or librettists:

- **Lyricists** write only the words to a tune or melody that someone else has composed. They write songs in all musical styles including rock, jazz, pop and country.
- **Librettists** write the words sung in musical dramas, operas, oratorios and other dramatic classical song literature. With words, they create the scenes and characters that tell the story.

Song writing is a very personal process; there are as many ways to write a song as there are people who write them. However, in general, songwriters:

- may write the lyrics first and the melody later, or compose the melody first and the words later
- rework both lyrics and melody many times to produce a marketable product.

To market their work, songwriters may:

- ask record company representatives and music publishers to come out to live performances at clubs and concerts
- make demonstration tapes that present songs in a professional manner and send the tapes to performers, record company representatives and music publishers.

Songwriters may record demo tapes on home sound recording systems at a cost of a couple of hundred dollars, or in professional studios at a cost of several thousand dollars. Many songwriters are musicians and singers themselves, and record their own demos, accompanying themselves on the piano or guitar. They may hire side musicians or singers to perform as well.

The ultimate goal for many songwriters is to have their songs chosen by record companies, music publishers or recording artists, and have them turn it into a hit single.

Working Conditions

Songwriters often work alone, although they sometimes work together as collaborators. Their hours of work and working environments vary considerably. Those who write advertising jingles for radio and television commercials must be able to work under the pressure of tight deadlines.

Personal Characteristics

Songwriters need the following characteristics:

- creativity and talent
- the flexibility required to work with other people's ideas and suggestions
- the self-motivation and self-discipline required to keep writing
- the perseverance and determination required to handle rejections by publishers and recording artists.

It may take years before a songwriter has a successful song on the music charts.

Songwriters should enjoy the creative process and expression involved in their craft.

Educational Requirements

There is **no formal training required** to be a songwriter. However, the ability to play one or more instruments is helpful for working out melodies, and knowledge of music theory, harmony, arrangement and composition are helpful. Computer skills are also helpful because more and more songwriters are recording their own demo tapes.

Songwriters need an excellent working knowledge of the language in which they choose to write, and the ability to work within the structures required for songs.

The **Society of Composers, Authors and Music Publishers of Canada** offers song writing workshops and seminars periodically in larger centres across Canada.

Employment and Advancement

(section revised JANUARY 2006)

Many people can write songs, but relatively few can write songs that have commercial value. For some songwriters, writing advertising jingles is a stepping stone to becoming a lyricist or songwriter. These songwriters may work under contract with advertising agencies or radio and television stations.

Most songwriters send copies of their demo tapes to:

- music publishers
- recording artists
- music producers.

Publishers, singers and producers are always on the lookout for good material and listen to hundreds of new songs each year. However, they are often overwhelmed with requests to listen to new material so novice songwriters often find it difficult to get their music heard.

Songwriters are part of the larger National Occupational Classification 5132: Conductors, Composers and Arrangers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Repair, Maintenance, Personal and Other Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving exisiing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 300 Albertans are employed in the Conductors, Composers and Arrangers occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since songwriters form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for songwriters.)

Salary

(section revised OCTOBER 2005)

Songwriters are paid royalties for performances of their work. In Canada, performance rights royalties are collected and distributed by the Society of Composers, Authors and Music Publishers of Canada. Therefore, to receive royalties, songwriters must be members of SOCAN and register their work.

Songwriters earn royalties from:

- the sale of tapes, compact discs and videos (mechanical royalties)
- the sale of sheet music and the use of their music in films (synchronization royalties)
- radio, television and motion picture performances of their music and live performances in venues such as bars and clubs, exhibitions and concert halls (provided certain criteria are met).

Songwriters who do not assign their works to publishers are entitled to all of the royalties for performances of their work. Those who assign their works to publishers usually receive 50 per cent. Some songwriters own and operate their own publishing companies but songwriters new to the field usually earn more if they have a contract with an established publishing company.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Conductors, Composers and Arrangers occupational group working part-time or full-time earned an average salary of **$22,900 a year**.

Special Event Co-ordinator

Produced APRIL 2003

Special event co-ordinators plan, organize and co-ordinate conferences, meetings, seminars, exhibitions, trade shows, festivals and other special events.

NOC Number(s): 1226
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: D S I

Duties

Special event co-ordinators' duties vary depending on the nature of the events they organize but, in general, they:

- identify the objectives of the event and determine the requirements that must be met to accomplish those objectives (e.g. facilities and services)
- meet with trade and professional associations and other groups to promote conference, convention and trade show services and research potential sponsors
- meet with sponsors and organizing committees to plan event scope and format, establish and monitor budgets, review administrative procedures and discuss progress
- co-ordinate services (e.g. accommodation and transportation for participants, catering, signage, displays, translation services, audio-visual equipment, printing, security) and deal with any problems that arise
- plan entertainment and social gatherings for participants
- receive and process registrations
- hire, train and supervise volunteers and support staff
- negotiate contracts for services, approve invoices, maintain financial records, prepare or review final billing for the event and prepare reports.

Organizing a special event may require:

- developing or helping to develop a plan, program or agenda
- selecting sites and co-ordinating building and property services (e.g. audiovisual and technical details, decorations and/or seating)
- organizing admissions, transportation and related services such as emergency services
- marketing the event and promoting sponsorships
- negotiating rates with suppliers and controlling expenses
- designing and implementing public relations campaigns
- recruiting, training and motivating staff and/or volunteers
- preparing and distributing the event minutes.

Working Conditions

Special event co-ordinators may work on several projects at once and may have to travel to event sites. Long hours are often required, particularly just before and during an event. At times, the work is stressful.

Personal Characteristics

Special event co-ordinators need the following characteristics:

- excellent communication skills
- excellent organizational and time management skills
- problem solving skills
- the ability to negotiate agreements and mediate disputes
- the ability to work effectively with all sorts of people

- the ability to pay close attention to details
- the ability to work well under pressure and make responsible decisions quickly.

They should enjoy organizing and co-ordinating activities, and talking to people.

Educational Requirements

(section revised MAY 2005)

Most employers prefer to hire special event co-ordinators who have experience in the co-ordination or supervision of one or more events, and have related post-secondary education.

In Alberta, the following post-secondary institutions offer programs specifically about special events co-ordination.

- **Bow Valley College** in Calgary offers a 32 week Events Management Certificate program that includes four weeks practicum. The entrance requirement is English 20 or 23 and a Grade 10 math, or equivalent.
- **Lakeland College** in Sherwood Park offers a Special Events Co-ordinator certificate of training program through Continuing Education. The entrance requirement is high school diploma with English 30 or 33, English Language Arts 30-1 or 30-2 and Pure Math 10 or Applied Math 10.
- **Mount Royal College** in Calgary offers a six course Event Management certificate program through Continuing Education. Applicants must be at least 18 years of age.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

The following institutions offer programs related to hospitality and tourism:

- **Lethbridge Community College** offers a two year diploma program in Hotel and Restaurant Management. The entrance requirement is a high school diploma or equivalent with English 30 or 33, Math 30 or 33 or Pure or Applied Math 30.
- **Red Deer College** offers a two year Hospitality and Tourism diploma program with specializations in accounting and finance management, food and beverage management, and rooms and marketing management. The entrance requirement is a high school diploma or equivalent.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a Hotel and Restaurant Management diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33, and Pure or Applied Math 30 or Math 33.
- The **University of Calgary** Haskayne School of Business offers a four year Bachelor of Hotel and Resort Management (BHRM) degree program that may also be taken as a five year co-op program. The entrance requirement is a high school diploma with an overall average of at least 70 per cent in English 30, Math 30, and three other appropriate Grade 12 subjects, and a SAIT diploma in Hotel and Restaurant Management (or equivalent) with a grade point average of 3.0/4 or above. The University of Calgary also offers four year and five year co-op Bachelor of Commerce (B.Comm.) degree programs in Tourism and Hospitality Management.

Public colleges and private university colleges throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

Other Requirements

(section revised OCTOBER 2005)

Alberta Tourism Education Council (ATEC) offers two levels of certification in this field: Special Events Co-ordinator and Special Events Manager.

Employment and Advancement

(section revised JANUARY 2006)

Special event co-ordinators may work on a short-term or permanent basis for:

- tourism associations
- trade and professional associations
- hotels
- festival and event associations
- municipal parks and recreation departments
- educational institutions

- large corporations
- convention and conference centres
- conference and event planning companies.

Those employed full-time may have other responsibilities as well. Advancement tends to take the form of being given responsibility for larger, more complex events or moving into supervisory positions. Experienced special event coordinators who have a broad range of contacts may establish their own companies.

Special event co-ordinators are part of the larger National Occupational Classification 1226: Conference and Event Planners. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Public Administration**
- **Repair, Maintenance, Personal and Other Services**
- **Professional and Technical Services**
- **Management, Administrative and Other Support Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,100 Albertans are employed in the Conference and Event Planners occupational group which is expected to grow 1.1 to 2.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since special event co-ordinators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for special event co-ordinators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for special event co-ordinators vary considerably depending on the nature of the event, the qualifications of the co-ordinator and whether the position is full-time or contract.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Conference and Event Planners occupational group working part-time or full-time earned from **$21,000 to $74,000 a year.** The average salary was **$34,900 a year.**

Special Needs Teacher

Produced JANUARY 2006

Special needs teachers work primarily with children who require special instructional services to help them learn and develop to their potential.

NOC Number(s): 4142
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S I D**

Duties

Special needs teachers spend most of their working day providing instruction and dealing with unexpected as well as routine situations. They work with children who have:

- physical or developmental disabilities
- hearing, visual, speech or language disabilities
- learning disabilities
- behaviour disorders or mental illness
- high intelligence or talent.

Special needs teachers must understand the unique characteristics of each student and choose or develop appropriate instructional programs and methods. Teaching techniques and methods vary with the particular disability or special talent but, in general, special needs teachers:

- work closely with parents and professionals from community agencies
- perform diagnostic assessments to determine student strengths and areas of need
- develop educational goals, objectives and individualized program plans
- choose or develop specially-designed instructional methods and materials
- prepare and present lessons
- monitor student performance and assess each student's progress
- work with teaching assistants.

Their working environments and responsibilities may vary considerably. For example, special needs teachers may:

- teach all or most subjects for a class of children who have a variety of disabilities or a particular type of difficulty
- meet with students from regular school classrooms on an individual basis or in small groups, and work in co-operation with classroom teachers to help children who have mild learning disabilities, language deficiencies or academic deficiencies
- travel from school to school providing tutorial services for students who are hearing or vision impaired, and provide consultative services for classroom teachers
- work with therapists in special clinics which children visit for assessments, therapy or instruction
- work with other teachers to adapt educational programs for special needs students in regular classrooms.

Special needs teachers also may work in:

- special schools with many classes of disabled children
- hospitals for children with short and long-term disabilities or illnesses
- the homes of children who are homebound due to sickness, rehabilitation needs or severe physical handicap
- institutional schools for children who have neuropsychiatric, emotional or social disabilities.

Working Conditions

Working with special needs children requires considerable physical, mental and emotional energy. Other working conditions for special needs teachers vary depending on student needs, the type of facility and the philosophy of the facility. For example, some special needs teachers may lift over 25 kilograms when helping children move to and from wheelchairs.

Personal Characteristics

In addition to the qualities required by other teachers, special needs teachers must be able to:

- work closely and co-operatively with other teachers, parents and consultants
- maintain a positive attitude and focus on student capabilities, not limitations.

They should enjoy finding different ways to solve questions and present information, and organizing and co-ordinating the work of others.

Educational Requirements

Special needs teachers may need specific skills for working with children who have particular types of disabilities. For example, teachers of deaf and hard of hearing children must be able to use various sign languages, techniques and aids to communicate with their students.

In Alberta, special needs teachers generally have a bachelor of education (B.Ed.) degree with a specialization related to special education. The minimum qualification is a four year B.Ed. degree in elementary education, or a university degree in another area and a teaching certificate. For a list of Alberta post-secondary institutions that offer B.Ed. degree programs in elementary education, see the Elementary School Teacher occupational profile.

In Alberta, the following post-secondary institutions offer programs specifically related to special needs teaching:

- **Athabasca University**, the **University of Alberta**, the **University of Calgary** and the **University of Lethbridge** offer a one year (24 credit) University Diploma in Special/Inclusive Education program for teachers interested in the area of special needs. Learners can take distance education courses from Athabasca University and/or courses offered on campus at one of the other universities. The admission requirement is an Alberta professional teaching certificate or equivalent.
- The University of Alberta, University of Calgary and University of Lethbridge offer B.Ed. and master's degree programs in special/inclusive education.
- The University of Alberta and University of Calgary offer doctoral (PhD) programs in special education.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Special needs teachers are employed in public and private schools, and in hospitals and other institutions. With experience and additional training, they may advance to positions in school administration or consulting services.

Special needs teachers are part of the much larger National Occupational Classification 4142: Elementary School and Kindergarten Teachers. In Alberta, people employed in this classification work in the **Educational Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Educational Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 28,000 Albertans are employed in the Elementary School and Kindergarten Teachers occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 360 to 650 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since special needs teachers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for special needs teachers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries vary from one school board to another because wages and benefits are determined by collective agreements between boards and their teachers. However, all teachers are paid according to a grid system based on the number of years of training and experience a teacher has.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Elementary School and Kindergarten Teachers occupational group working part-time or full-time earned from **$12,400 to $95,100 a year.** The average salary was **$62,200 a year.**

All teachers employed in Alberta's publicly supported schools are members of the Alberta Teachers' Association (ATA) and are automatically included under the Alberta Teachers' Pension Plans Act. Collective agreements negotiated by the ATA provide a range of benefits including:

- life and disability insurance
- extended health care coverage
- vision and dental insurance
- professional improvement leave.

Holidays and pensions are specified by provincial legislation. However, many teachers use the summer break period of July and August, Christmas and spring-break holidays for professional development and for fulfilling additional professional responsibilities.

Speech-Language Pathologist

Produced DECEMBER 2004

Speech-language pathologists work with children and adults to prevent, assess, diagnose and provide treatment and counselling for speech, language, voice and swallowing disorders.

NOC Number(s): 3141.2
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: M I S

Duties

Speech-language pathologists work with people ranging in age from infants to adults. They help clients restore/improve their ability to communicate or swallow properly. In general, this involves:

- using a variety of specialized tests and procedures to assess and identify language, speech, voice, resonance and swallowing disorders.
- developing and implementing treatment plans.
- providing consultative and intervention services.
- counselling clients and families regarding communication and swallowing disorders.
- designing and employing augmentative and alternative communication strategies and devices.
- consulting with others (e.g. educators) regarding speech and language stimulation, communication strategies, and teaching strategies for children who have communication disorders.
- consulting with and advising other health professionals.
- educating and supervising students, professionals and support personnel in a variety of work settings.
- working with multi-disciplinary teams to assess and treat clients.
- participating in research and public education activities.

Treatments for developmental or medical conditions may involve a variety of activities including one-to-one therapy, group therapy or consulting with parents and others. Treatment goals vary depending on the situation. For example, the goal may be to make a client's speech understandable, foster language development or restore language use after a stroke.

Speech-language pathologists may specialize in working with people who have a particular type of disorder (e.g. stuttering) or with a particular age group (e.g. pre-schoolers). They often work in teams which may include audiologists, physicians, psychologists, social workers, nurses, teachers, occupational therapists, physiotherapists, recreational therapists or speech-language pathology assistants.

Working Conditions

Speech-language pathologists generally work standard weekday office hours. They may be required to travel to a variety of locations (e.g. community health centres, day care centres, hospitals, nursing homes, rehabilitation centres, schools, clients' homes).

Personal Characteristics

Speech-language pathologists need the following characteristics:

- excellent communication and interpersonal skills
- the intellect and perseverance required to complete the training
- sensitivity to client needs
- creative problem solving skills
- the ability to set priorities and deal with multiple demands
- the ability to concentrate and pay close attention to details

- the ability to work effectively in a team environment.

They should enjoy working with people and their families and exploring problems in depth.

Educational Requirements

The education requirement for speech-language pathologists is a **master's degree in speech-language pathology**.

The **University of Alberta** in Edmonton offers two Master of Speech-Language Pathology (MSLP) degree programs: a non-thesis program and a thesis program. The non-thesis program is a 24 month, course based, clinical training program. The entrance requirement is a four year bachelor's degree in a discipline other than speech-language pathology with courses in linguistics and psychology and a grade point average (GPA) of at least 3.3/4 (or 7.5/9). Blocks of practical training and an internship in a school, rehabilitation centre or health care facility are required before graduation.

Universities and colleges throughout Alberta offer four year bachelor's degree programs that can provide suitable preparation for a master's degree program in speech-language pathology. Admission requirements vary from one post-secondary institution and program to another but generally include a high school diploma with an average of at least 60 per cent (sometimes 70 per cent) in English 30, Pure Math 30 or Math 30, Biology 30 and two other appropriate 30-level subjects.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Health Professions Act and Speech-Language Pathologists and Audiologists Profession Regulation, registration with the Alberta College of Speech-Language Pathologists and Audiologists (ACSLPA) is mandatory if you meet identified competency requirements and provide professional services directly to the public, teach the practice of speech-language pathology to others or supervise speech-language pathologists who provide professional services to the public. Only registered members may call themselves Speech-Language Pathologists.

Employment and Advancement

(section revised JANUARY 2006)

Most speech-language pathologists are employed as clinicians by:

- private practice offices
- community health centres
- regional health authorities
- schools.

Some are employed:

- as researchers in hospitals, universites and government agencies (PhD usually required)
- as administrators of speech and hearing programs.

Private practice fees are not covered by Alberta Health Care Insurance but many private insurance plans as well as other sources of government funding cover some services.

Speech-language pathologists are part of the larger National Occupational Classification 3141: Audiologists and Speech-Language Pathologists. In Alberta, people employed in this classification work in the following industries:

- **Health Care and Social Assistance**
- **Educational Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 900 Albertans are employed in the Audiologists and Speech-Language Pathologists occupational group which is expected to grow 3.0 to 4.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since speech-language pathologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for speech-language pathologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Audiologists and Speech-Language Pathologists occupational group working part-time or full-time earned from **$15,300 to $70,100 a year.** The average salary was **$60,400 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Speech-Language Pathologist Assistant

Produced DECEMBER 2004

Speech-language pathologist assistants carry out treatment programs that are planned, directed and supervised by speech-language pathologists to improve client communication skills.

NOC Number(s): 3235.3
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: M S O

Duties

Speech-language pathologist assistants work with people of all ages and in a variety of settings. Their duties therefore vary from one position to another but, in general, they:

- conduct articulation and language therapy activities that are based on goals and treatment plans developed by speech-language pathologists for individual clients or groups
- conduct hearing screenings
- work directly with clients as assigned by a speech-language pathologist
- make materials used in therapy (e.g. communication boards)
- prepare activities (e.g. gather picture cards, workbooks, games)
- assist with scheduling and room set-up for assessments
- keep records about client progress and performance during therapy sessions
- compile statistics about daily activities
- perform clerical tasks such as filing, photocopying, laminating and computer support
- order, maintain and inventory supplies and equipment
- regularly meet with their supervising speech-language pathologists.

Working Conditions

Speech-language pathologist assistants usually work standard weekday hours, often in school settings. They may be required to travel to various locations including day care centres and hospitals.

Personal Characteristics

Speech-language pathologist assistants need the following characteristics:

- good observation skills
- good organizational and time management skills
- flexibility and adaptability
- good interpersonal skills
- strong oral and written communication skills
- patience
- creativity
- ability to take direction and follow treatment programs set out by speech-language pathologists
- ability to work effectively as part of a team.

They should enjoy taking a methodical approach to compiling information about client progress, instructing clients about ways to improve communication skills, and handling the equipment and materials used in therapy.

Educational Requirements

(section revised APRIL 2005)

Some speech-language pathologist assistants have been trained on the job but employers generally prefer to hire applicants who have a Speech-Language Pathologist Assistant diploma or an equivalent combination of education and experience (e.g. experience working with people who have disabilities). Proficiency in one or more languages other than English is an asset.

In Alberta, the following institutions offer therapist assistant programs in which students may train to become speech-language pathologist assistants:

- **Grant MacEwan College** in Edmonton offers a two year Therapist Assistant diploma program. Applicants must have 65 per cent in English 30, Social Studies 30 and three other Grade 12 subjects.
- **Medicine Hat College** offers a two year Speech Language Pathologist Assistant diploma program onsite and by distance education. Applicants must have a high school diploma or equivalent with at least 60 per cent in English 30, Biology 30 and two other 30 or 33-level subjects, one of which must be a 30-level Science or Math.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Speech-language pathologist assistants are employed in:

- schools, day care centres and preschool programs
- regional and community health centres, long term care facilities, hospitals and rehabilitation centres
- the private practices of speech-language pathologists.

Without further education, advancement opportunities are limited.

Speech-language pathologist assistants are part of the larger National Occupational Classification 3235: Other Technical Occupations in Therapy and Assessment. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,900 Albertans are employed in the Other Technical Occupations in Therapy and Assessment occupational group which is expected to grow 1.8 to 2.8 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since speech-language pathologist assistants form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for speech-language pathologist assistants.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Hourly wages for speech-language pathologist assistants range from **$12 to $20 an hour (2004 estimate)**.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Technical Occupations in Therapy and Assessment occupational group working part-time or full-time earned from **$11,900 to $85,100 a year.** The average salary was **$30,600 a year.**

Sport Medicine Physician

Produced DECEMBER 2004

Sport medicine physicians are medical doctors who specialize in the prevention, recognition, diagnosis and treatment of injuries and diseases related to sports activities.

NOC Number(s): 3112
Minimum Education: 8 + years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I S D**

Duties

Most sport medicine physicians are orthopedic surgeons, emergency surgeons or family medicine practitioners who have a particular interest and training in the treatment and prevention of sports-related injuries and disorders.

Sport medicine physicians work as part of a team with other health professionals including exercise physiologists, nutritionists, athletic therapists and physical therapists. In general, sport medicine physicians:

- examine and evaluate athletes prior to their participation in sport activities to determine level of fitness and any predisposition to injury
- observe and evaluate the emotional well-being of athletes especially young players who may be under pressure from parents or others
- assist coaches and therapists to select and fit protective equipment
- work with therapists and coaches regarding the proper use of exercises and physiotherapeutic techniques, and advise them against practices that may be dangerous to athletes
- examine, evaluate and treat athletes who have been injured or who have medical problems such as exercise-induced asthma
- order diagnostic procedures such as x-rays and laboratory tests
- prevent injured athletes from returning to the game/competition if resuming could injure them further
- supervise the rehabilitation and return to activity of injured athletes
- attend games and international competitions.

Sport medicine physicians also may conduct research in the prevention and treatment of conditions related to sports and exercise.

Working Conditions

Sport medicine physicians work regular hours in clinics and hospitals but also are on call in case of emergencies. Many sport medicine physicians attend practices and competitions and travel to attend out-of-town competitions.

Personal Characteristics

Sport medicine physicians need the following characteristics:

- the intellectual ability required to successfully complete the required academic training and keep up to date with new developments in medicine
- a keen interest in sports and fitness
- the ability to put the needs of the athlete ahead of the needs of a team when necessary
- good communication skills.

They should enjoy finding solutions to problems, dealing with people and directing the work of others.

Educational Requirements

Sport medicine is not recognized as a medical specialty in Canada. The **Canadian Academy of Sport Medicine (CASM)** is working toward having the occupation recognized as a separate health discipline but that recognition is probably several years away.

Anyone practising as a sport medicine physician must be licensed by the College of Physicians and Surgeons of Alberta as a family physician or a specialist physician, and have a Diploma in Sport Medicine from CASM. Licensing requires graduation from a Medical Doctor (MD) program at a recognized university followed by residency training. In Canada, most sport medicine physicians complete a fellowship program in sport medicine after their residency.

In Alberta, MD programs are offered by the following institutions:

- The **University of Alberta** in Edmonton. The entrance requirement is satisfactory completion of at least two years of university studies with courses in organic and inorganic chemistry, English, physics, biology and statistics.
- The **University of Calgary**. The entrance requirement is completion of at least three years of recommended Arts and Sciences courses at a recognized post-secondary institution.

Because these are quota programs, many applicants who fulfill the entrance requirements cannot be accepted. Successful applicants are selected on the basis of:

- academic grades
- non-academic criteria such as letters of recommendation, resume, and personal interviews
- the results of a Medical College Admission Test (MCAT).

The required university courses may be taken entirely at the University of Calgary or the University of Alberta or, in part, at other post-secondary institutions.

Post-secondary institutions across Alberta offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer. When planning their university studies, prospective students should contact both Faculty of Medicines' admissions offices to ensure that they acquire all of the necessary prerequisites.

In general, the admission requirement for university and university transfer programs is a high school diploma or equivalent with a specified minimum average (ranging from 60 to 70 per cent depending on the program) in English 30, Pure Math 30 and three other appropriate Grade 12 subjects (usually Biology 30, Physics 30 and Chemistry 30).

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

After completing the MD program, family physicians must complete at least two years of residency training. Orthopedic surgeons take at least five years of residency training.

Other Requirements

Under Alberta's Medical Profession Act, you must be a registered member of the College of Physicians and Surgeons of Alberta (CPSA) to practice medicine in Alberta.

Employment and Advancement

(section revised JANUARY 2006)

Most sport medicine physicians work in private practice or sport medicine clinics. They may be employed or contracted by athletic teams and organizations, or volunteer their services.

The movement toward making sport medicine a recognized branch of medicine is being fuelled by new discoveries about conditioning, nutrition, the effects of drugs and how the human body performs under stress. This trend is expected to create employment opportunities for sport medicine physicians in more diverse settings such as occupational health, community health and the military.

Sports medicine physicians are part of the larger National Occupational Classification 3112: General Practitioners and Family Physicians. In Alberta, people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

Over 5,150 Albertans are employed in the General Practitioners and Family Physicians occupational group which is expected to grow 3.5 to 4.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 180 to 240 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since sport medicine physicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for sport medicine physicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Incomes for sport medicine physicians vary depending on location, specialty and years of practice.

Sports Instructor

Produced MARCH 2005

Sports instructors teach the basics of a particular sport (e.g. skiing, swimming, baseball) to beginners and recreational athletes, or help experienced athletes further develop their skills.

NOC Number(s): 5254
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M S i**

Duties

People who teach the general public or recreational athletes are usually called instructors, and those who teach competitive athletes are called coaches. In some sports, however, there is no distinction between instructor and coach. For information about coaching, see the Coach occupational profile.

Sports instructors teach participants individually or in groups the basic stances, movements, techniques, rules, regulations and safety precautions in a sport. Their duties vary greatly depending on the type of sport and the skill level of the participants. In general, however, sports instructors:

- demonstrate correct techniques, procedures, use of equipment and exercises to enhance students' abilities
- teach the basic rules and strategies of the game or sport
- demonstrate and teach appropriate personal safety skills
- assess students' levels of ability
- ensure the safety of participants
- demonstrate the proper use of equipment
- build confidence in students
- evaluate student progress and assign grades where appropriate
- organize events in which students may demonstrate their abilities
- maintain sports equipment
- counsel students regarding nutrition and lifestyle
- provide firsta aid when required.

Sports instructors also may:

- advise students regarding equipment and clothing
- sell clothing and equipment at clubs or resorts
- participate in sport demonstrations or competitions.

Working Conditions

Depending on the sport, sports instructors may work indoors in community facilities or clubs (e.g. gymnastics or swimming) or outdoors (e.g. skiing). Some work both indoors and outdoors, teaching and demonstrating techniques indoors and supervising student practice outdoors.

Some sports instructors work full-time but most work part-time, seasonally or mainly on weekends and evenings. The number of hours they work sometimes depends on the reputation and ability of the instructor, ranging from two to twenty or more hours a week. In some sports, instructors may be required to lift items weighing up to or over 25 kilograms. Instructors who suffer injuries may no longer be able to work in this occupation.

Personal Characteristics

Sports instructors need the following characteristics:

- physically fit
- patient
- enthusiastic
- responsible
- organized
- very good communicator
- able to work with and relate to people of all ages
- good leader and motivator.

They should enjoy having clear rules and organized methods, dealing with people and designing new programs.

Educational Requirements

Sports instructors must be proficient in relevant sport skills. Many have reached competitive levels in their sport. It is recommended that all instructors be trained in First Aid and have current CPR training. A background in physical education or experience in teaching is an asset.

Some sports require instructors to have reached a high level of proficiency in the sport, and to be certified through the National Coaching Certification Program (NCCP). For more information, see the Coach occupational profile.

Sports associations usually have a certification process for those wanting to teach. For example:

- **ski instructors** are certified through the **Canadian Ski Instructors' Alliance (CSIA).** There are four levels of certification.
- **swim instructors** must be certified as Water Safety Instructors by the Red Cross or as Swimming and Lifesaving Instructors by the **Lifesaving Society**. The Swimming and Lifesaving Instructor Award allows individuals to teach the Swimming, Water Rescue and Lifesaving courses of the Canadian Lifesaving Program.
- **tennis instructors** can progress through several levels of **Tennis Canada** certification as coaches or club professionals.

Employment and Advancement

(section revised JANUARY 2006)

Sports instructors are employed by:

- provincial sports associations
- community leagues
- YMCAs and YWCAs
- health clubs
- resorts
- camps
- private clubs
- parks and recreational facilities (e.g. swimming pools)
- private businesses
- continuing education departments of local schools
- university and college athletic departments.

Most sports instructors work part-time. Some jobs are seasonal.

Sports instructors can become coaches, trainers or athletic managers. Swimming instructors may become lifeguards. Some sports instructors are also recreational facility operators.

Sports instructors are part of the larger National Occupational Classification 5254: Program Leaders and Instructors in Recreation and Sport. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Educational Services**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 7,400 Albertans are employed in the Program Leaders and Instructors in Recreation and Sport occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 180 to 260 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since sports instructors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for sports instructors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Some sports instructors are volunteers. Those who are paid may charge by the class or by the hour. Fees/wages vary depending on the sport.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Program Leaders and Instructors in Recreation and Sport occupational group working part-time or full-time earned from **$9,800 to $61,400 a year.** The average salary was **$26,000 a year.**

© Government of Alberta, Human Resources and Employment

Sports Official

Produced MARCH 2005

Sports officials ensure that established rules and regulations are observed at sporting events (games or competitions).

NOC Number(s): 5253
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M D s**

Duties

Sports officials are responsible for maintaining standards of play and enforcing the rules and regulations that govern their sport (e.g. football, hockey, curling, baseball, figure skating, ski jumping). In general, sports officials:

- ensure safe playing conditions
- keep track of playing time and elapsed time, and start and stop play when required
- award points
- assess and enforce penalties when necessary
- establish and maintain rapport with coaches, players and organizing committees.

Depending on the sport, they also may:

- keep track of the score and other athletic records
- judge performance and determine results
- verify calculations before medal presentations
- respond to written protests
- verify competitors' credentials
- check that equipment follows guidelines for the sport.

In some sports, officials use hand signals to communicate their decisions.

Working Conditions

Officiating is often strenuous work that demands close attention to detail and involves a great deal of pressure and concentration. Evening and weekend work is common. Travel is often required.

Depending on the sport, officials may be required to work indoors or outdoors. In some sports, officials may routinely lift heavy items or wear protective gear to avoid getting hurt during games.

Personal Characteristics

Sports officials need the following characteristics:

- a genuine interest in the sport
- the ability to make quick, fair, correct judgements
- confidence
- good communication and interpersonal skills
- a good memory for details
- the ability to see well
- the ability to remain alert and focused on the competition
- the ability to remain calm under pressure and maintain control
- the ability to ask for feedback and accept criticism.

They should enjoy having clear rules and guidelines for their work, analyzing and directing the performance of others, and dealing with people.

Educational Requirements

Sports officials must have extensive knowledge of their sport and its rules, and be **certified and registered** with the governing body or commission responsible for the sport.

- **Baseball umpires** must be trained through the National Umpire Certification Program administered in Alberta by Baseball Alberta. The first of five levels of certification is required to umpire Regional Minor Baseball games. Level 5 is required for Olympic level games.
- **Curling officials** have four levels of certification. Level III (district association and provincial playdowns) and Level IV (national championships) officials are appointed by the Canadian Curling Association.
- **Figure skating evaluators** must be members of the Canadian Figure Skating Association. Officials' qualifications can vary but, in general, they must maintain amateur status and not receive financial compensation for judging.
- **Football officials** are members of local associations that are members of Football Alberta. New members work under the direction of qualified officials and participate in various training seminars. The Canadian Football League (CFL) requires its officials to have at least eight to twelve years of experience officiating amateur football games.
- **Hockey officials** also begin in provincial amateur leagues. Officials work their way through the six levels of the Canadian Hockey Officiation program to become senior officials. Advancement through these levels is based on ability and experience as evaluated by the executive of the local association.
- **Ski jumping officials** must be members of the Ski Jumping Canada. They must pass different examinations to work at divisional, national and international levels.
- **Swim officials** are volunteers certified by Swim Alberta. There are five levels of certification.
- **Volleyball officials** are governed by Volleyball Canada, and provincial and zone associations. Officials may be certified at the local, provincial, regional, national or international level.

Requirements for other officials vary greatly from sport to sport. For specific information, contact the governing body for the sport or the official body representing the sport.

Employment and Advancement

(section revised JANUARY 2006)

Employment opportunities for sports officials at the professional level are limited. Most officials in amateur sports are volunteers or are paid per game. They officiate as a hobby or to supplement income from other sources.

- Amateur **baseball umpires** may be recommended by the National Umpire Certification Program for part-time or fill-in positions for professional and semi-professional games in Alberta.
- After they gain experience and expertise, **football officials** are assigned to officiate at more advanced levels (e.g. college or university games). For the most part, these assignments are given only to officials who have extensive experience and knowledge of the rules of football. Amateur officials who have several years of experience are recommended by local amateur associations to the Canadian Football League (CFL) for consideration. A very small number are invited by the CFL to attend the training program held prior to each football season.
- **Hockey officials** can progress from officiating minor hockey to the Western Hockey League. National Hockey League (NHL) officials are recruited from the Western Hockey League. An average of one official per year is selected for full-time employment in the NHL.
- **Ski jumping officials** at the divisional level may progress to national and international levels.
- All five levels of **swim officials** are volunteers.

Sports officials are part of the larger National Occupational Classification 5253: Sports Officials and Referees. In Alberta, most people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 750 Albertans are employed in the Sports Officials and Referees occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 20 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Most sports officials are paid a set fee per game. Fees vary from one sport to another and depend on the level of sport.

Sprinkler Systems Installer

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Sprinkler systems installers fabricate, install, test, maintain, inspect and repair sprinkler systems in industrial operations, department stores, office buildings, hotels, schools, hospitals and residences.

NOC Number(s): 7252.2
Minimum Education: Apprenticeship Trade - Grade 10
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O i m**

Duties

To install wet and dry pipe sprinkler systems, carbon dioxide, chemical and foam extinguishing systems, stand pipe and hose systems and fire pump systems, sprinkler system installers:

- read and interpret engineered drawings and specifications to determine layout requirements
- select the type and size of pipe required and arrange the piping to provide fire protection
- install clamps, brackets and hangers to support the piping system and sprinkler and fire protection equipment
- join and connect pipes and piping sections to related piping systems, tanks, mains, pumps, compressors and control equipment using various pipe joining methods
- test systems for leaks using air or water pressure
- inspect, maintain and repair piping, fixtures and controls including hydrant, pump and sprinkler head connections
- may prepare cost estimates for clients.

Working Conditions

Sprinkler systems installers work primarily indoors, often in temporarily heated or unheated spaces. They work a standard 40-hour week but occasionally work overtime to meet construction deadlines. There can be some risk of injury when working on construction sites.

Sprinkler system installers may be required to lift items weighing up to 25 kilograms.

Personal Characteristics

Sprinkler systems installers need the following characteristics:

- physical strength and stamina
- manual dexterity
- the ability to work in high places
- the ability to do precision work.

They should enjoy working with little direction or supervision.

Educational Requirements

To work in Alberta, sprinkler systems installers must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 10 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Good marks in applied math and physics, English (particularly reading comprehension), drafting and industrial arts are particularly important.

The **term of apprenticeship** four years (four 12-month periods) that include a minimum of 1,600 hours of on-the-job training and seven weeks of technical training in each of the first three years and a minimum of 1,800 hours of on-the-job training in the fourth. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Sprinkler systems installer apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at Red Deer College.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Sprinkler systems installers are employed in the construction industry.

Experienced sprinkler systems installers may advance to supervisory positions or start their own businesses. Alberta certified journeyman sprinkler systems installers who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Sprinkler systems installers are part of the larger National Occupational Classification 7252: Steamfitters, Pipefitters and Sprinkler Systems Installers. In Alberta, most people employed in the classification work in the following industries:

- **Construction**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 4,100 Albertans are employed in the Steamfitters, Pipefitters and Sprinkler Systems Installers occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 100 to 150 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since sprinkler systems installers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for sprinkler systems installers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice sprinkler system installers earn at least 45 per cent of the journeyman wage rate in their place of employment in the first year, 60 per cent in the second, 70 per cent in the third and 80 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$25 to $35 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Steamfitters, Pipefitters and Sprinkler System Installers occupational group ranged from **$28,300 to $73,100 a year.** The average salary was **$44,900 a year**.

Stage Manager

Produced JUNE 2002

Stage managers co-ordinate everything that happens during a stage performance: actors' movements and lines, props, scenery movements, lighting effects and sound effects. During rehearsals, stage managers co-ordinate schedules for the artistic and technical operation of the production.

NOC Number(s): 5226.7
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D M O**

Duties

From the beginning to the end of a theatre production, stage managers co-ordinate much of what the audience sees on stage. In general, they:

- do a script analysis that outlines the scenes, number of characters and who plays them, props required, costume changes, scene changes and technical requirements
- meet with the director, production manager and designer before rehearsals start to discuss production needs
- contact actors by telephone to tell them when and where to report for rehearsals
- attend rehearsals to document the artistic process and co-ordinate daily activities
- communicate daily with technical departments and management regarding rehearsal progress and requirements
- act as a liaison between actors and theatre management, together with an Actors' Equity deputy (an elected member of the acting company, in companies in Equity's jurisdiction).

During rehearsals, stage managers:

- ensure that regulations for breaks and overtime are observed
- make sure all safety regulations backstage are strictly enforced
- prepare a "prompt book" or written record of actors' cues, blocking, placement of props, and sound and lighting cues
- orchestrate a smooth-running production with the director, designer, actors and technicians.

On opening night, the director hands the production of the show over to the stage manager. The stage manager is then completely responsible for the production and for maintaining the artistic and technical intentions of the director and designer(s).

During performances, stage managers:

- ensure the readiness of both the cast and crew and the physical aspects of the production
- cue the light, stage and sound technicians as well as any other special effects personnel
- continue to communicate with theatre staff after the opening to keep them informed about the status of the production
- may call rehearsals during long performance runs.

In amateur or community theatre groups and some smaller professional theatres, stage managers may also help build and paint the set, operate lighting or audio during the performance or be responsible for finding people to help "strike" the set and store the lights, set, costumes and props. In larger theatres, stage managers usually have one or more assistants.

Working Conditions

Stage managers work long, irregular hours and must be prepared to work through weekends and holidays. Most productions are held during the evenings with rehearsals during the day. If the stage production is touring, the stage manager is expected to travel with the show.

Personal Characteristics

Stage managers must be able to:

- work under pressure (which builds toward opening night) and meet deadlines
- support and sometimes push others to keep to the production schedule
- adapt to the needs and sometimes difficult temperaments of actors
- remain calm, focussed, efficient and diplomatic at all times
- communicate clearly, orally and in writing
- work on several projects simultaneously
- organize their own work and that of others.

They should enjoy taking a methodical approach to their work, taking charge and controlling situations and negotiating with people.

Educational Requirements

(section revised JUNE 2005)

Stage management requires both people skills and technical skills. The technical aspects can be learned by working in the theatre or through formal training. Many stage managers take a related post-secondary education program, then participate in an apprenticeship program administered by Actors' Equity.

In Alberta, the following institutions offer related post-secondary programs:

- **Grant MacEwan College** in Edmonton offers a two year Theatre Production diploma program. The entrance requirement is a high school diploma with English 30 (or at least 75 per cent in English 33).
- **Mount Royal College** in Calgary offers a two year Theatre Arts diploma in techical theatre. The entrance requirement is a high school diploma or equivalent. An interview is required.
- **Red Deer College** offers a two year Theatre Studies diploma program with a specialization in theatre technology and management. The entrance requirement is a high school diploma or equivalent with English 30 or 33 plus an interview and audition.
- The **University of Alberta** in Edmonton offers a four year Bachelor of Fine Arts (BFA) degree program in Technical Theatre. English 30-1 and four of Biology 30, Chemistry 30, Pure Mathematics 30, Mathematics 31, Physics 30, Social 30, 30-level languages other than English, Fine Arts Subject (only one). Contact the faculty or department for specific academic and other requirements.
- The **University of Lethbridge** offers post-diploma and degree programs in drama with a technical/design major. The entrance requirement is an average of at least 60 per cent in English 30, three other appropriate 30-level subjects and a fifth Grade 12 subject.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

During the summer months, the **Banff Centre for the Arts** offers courses in Stagecraft for people who have some post-secondary education in Theatre Production. The Centre also offers Theatre Production Residencies in stage management. Applicants must submit a resume of related training and experience, and a statement of learning objectives.

Employment and Advancement

(section revised JANUARY 2006)

Stage managers work for:

- theatre companies
- dance and opera companies
- touring music events (concerts) and special events
- symphony orchestras
- television and radio stations and networks.

They may be hired for the run of one production or a season, and often accompany touring companies. Even large theatres may not hire stage managers year round.

Experienced stage managers may move into other positions in film and television production, arts administration, concert production or special event stage managing (e.g. at Olympics, festivals).

Stage managers are part of the larger National Occupational Classification 5226: Other Technical and Co-ordinating Occupations in Motion Pictures, Broadcasting and the Performing Arts. In Alberta, over 75 per cent of people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 550 Albertans are employed in the Other Technical and Co-ordinating Occupations in Motion Pictures, Broadcasting and the Performing Arts occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since stage managers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for stage managers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Since stage managers are usually hired on contract, their annual incomes vary considerably from one person to another, and may vary from one year to another.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Technical and Co-ordinating Occupations in Motion Pictures, Broadcasting and the Performing Arts occupational group working part-time or full-time earned from **$14,600 to $66,400 a year.** The average salary was **$28,900 a year.**

Station Attendant/Ramp Service Agent

Produced OCTOBER 2003

Station attendants are employed at airports to operate ramp servicing vehicles and equipment, handle baggage and perform other duties on the ramp and in cargo warehouses.

NOC Number(s): 7437
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O i**

Duties

Depending on the airline and size of the airport, station attendants may perform all or only some of the following duties:

- operate towing tractors, food service trucks, de-icer sprayers, lavatory servicing trucks, and other ramp servicing vehicles and equipment
- position passenger loading bridge and operate aircraft doors
- tow aircraft to gate position for loading or unloading
- refuel aircraft
- connect and operate ground support equipment such as ground power units and air conditioning units
- load and unload baggage and freight manually or by operating ramp equipment such as fork lifts, scissor lifts, conveyor belts and ramp tractors
- sort and route baggage, cargo and mail, and position cargo in warehouses
- load cargo in aircraft compactly and in compliance with weight restrictions to achieve proper load balance
- clean and stock aircraft cabins
- de-ice or wash aircraft
- load and position meals and related supplies during station stops.

Station attendants must observe safety precautions at all times around aircraft.

Working Conditions

Airlines operate 24 hours a day, so station attendants must work shifts with rotating days off. Most of the work is done outdoors in an environment that is often noisy. Heavy lifting (over 25 kilograms) is required.

Personal Characteristics

Station attendants need the following characteristics:

- able to lift heavy cargo
- good communication skills
- safety conscious
- able to work well under pressure.

They should enjoy having clear rules and organized methods, driving vehicles and operating equipment, and solving problems by experimenting.

Educational Requirements

Station attendants must qualify for a high level of security clearance. Most airline companies also require applicants to have a high school diploma or equivalent education, hold a valid driver's licence and be fluent in English. Fluency in French may be required for some positions and locations.

When there are a number of applicants for a station attendant position, airlines give preference to people who have an advanced driving certificate, heavy equipment training, additional education, previous airline experience, experience in physically demanding positions or experience in warehousing, stockrooms or shipping and receiving.

Station attendants are **trained on the job**. Some companies provide five or six weeks of training before assigning a new employee to a position.

Employment and Advancement

(section revised JANUARY 2005)

Station attendants are employed by airlines and airline subcontractors. Depending on company policy, they may be asked to transfer to other locations in Canada. Most entry level positions are part-time.

Station attendants who have the required qualifications may move into positions of greater responsibility or transfer to other positions such as passenger agent, cargo agent, baggage agent or load agent, or to administrative positions.

Station attendants are part of the larger National Occupational Classification 7437: Air Transport Ramp Attendants. In Alberta, most people employed in this classification work in the **Transportation and Warehousing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Transportation and Warehousing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,400 Albertans are employed in the Air Transport Ramp Attendants occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since station attendants form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for station attendants.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Air Transport Ramp Attendants occupational group working part-time or full-time earned from **$17,800 to $51,500 a year.** The average salary was **$ 6,900 a year.**

© Government of Alberta, Human Resources and Employment

Statistician

Produced DECEMBER 2005

Statisticians plan, organize, analyze and interpret studies to provide usable information for a wide range of activities. For example, they may be involved in agricultural or health research, evaluating government programs, assessing environmental problems, improving manufacturing or business processes, or forecasting future economic conditions.

NOC Number(s): 2161.2
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M D**

Duties

Statisticians work in fields such as biological, environmental and agricultural science, business and finance, physical sciences and engineering, medical and social sciences. In any of these fields, they may:

- apply statistical theories and methods to solve problems
- develop statistical methodology
- research the mathematical basis of statistics.

In general, statisticians work with others to:

- design projects, experiments and other studies
- determine the most efficient methods of collecting and organizing numerical data
- conduct surveys or supervise those directly engaged in collecting data
- analyze, summarize, make inferences and interpret the information collected
- write reports and present findings in the form of tables and graphs.

In business and industry, corporations employ statisticians to work in market research, human resource forecasting, inventory control, cost analysis and process improvement. For example, statisticians in business and industry may design, conduct and interpret customer satisfaction surveys.

In government, statisticians work in program planning, technological research, policy analysis, operational research, agricultural research, urban planning, wildlife management, energy and resource management, labour and economic forecasting, and social research.

In research, statisticians work with other professionals to plan and conduct studies and experiments. For example, statisticians involved in medical research work with doctors to investigate the causes of disease, and assess new drugs and medical treatments.

Working Conditions

Statisticians work in an office environment. They usually work normal office hours but may work overtime to meet project deadlines. They often work on several different projects at the same time. Teamwork is often required but statisticians also may work alone.

Personal Characteristics

Statisticians need the following characteristics:

- an aptitude for and interest in mathematics
- an interest in the application of scientific principles to the solution of practical problems
- the ability to think logically, organize projects and carry them out
- the ability to work alone as well as with others
- the ability to pay careful attention to details
- the ability to write clear, concise reports in language appropriate for intended readers.

Statisticians should enjoy synthesizing data, applying statistical theories and methods, and working with others to understand and solve problems.

Educational Requirements

The minimum academic requirement is a bachelor's degree in statistics or mathematics but a graduate degree (master's or doctoral) is usually required for higher level positions. A doctoral degree (PhD) is required to conduct independent research.

In Alberta, the following post-secondary institutions offer degree programs in statistics.

- The **University of Alberta** in Edmonton offers a four year Bachelor of Science (B.Sc.) degree with honours or specialization in Statistics and Applied Probability. The entrance requirement is a competitive average (80 per cent for the honours program) in English Language Arts 30-1 or English 30; Pure Math 30 or Math 30; two of the following: Physics 30, Chemistry 30, Biology 30, Science 30, Math 31; and one other approved 30 level subject (Math 31 recommended). Students in the program may include an industrial internship. The University of Alberta also offers master's and doctoral degree programs in statistics.
- The **University of Calgary** offers four year general and five year co-operative education Bachelor of Arts (BA) and B.Sc. degree programs in Statistics. The entrance requirement is a high school diploma or equivalent with a competitive average in (a) English Language Arts 30-1 or English 30, (b) Pure Math 30 or Math 30, (c) two of the following: Biology 30, Chemistry 30, Physics 30, Math 31, (d) one of the following: Social Studies 30, a 30 level language other than English, Science 30, a five credit Grade 12 subject or a subject listed in (c). Math 31 is recommended. The University of Calgary also offers master's and doctoral degree programs in statistics.

For information about degree programs in mathematics, see the Mathematician occupational profile.

University transfer programs are offered by colleges and universities located throughout the province. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit by the university they wish to attend.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Statisticians work for a variety of employers including:

- financial institutions
- Statistics Canada and other government departments
- medical and educational research agencies
- science and engineering consulting firms
- market research companies
- pharamceutical companies
- manufacturers and other companies requiring process improvement
- large scale manufacturing plants that require sophisticated maintenance programs
- universities.

Most jobs are located in major urban areas.

Outstanding individuals who have graduate degrees and many years of experience may move into management positions or private consulting work.

Statisticians are part of the larger National Occupational Classification 2161: Mathematicians, Statisticians and Actuaries. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Educational Services**
- **Food and Beverage Products Manufacturing**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta

- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 450 Albertans are employed in the Mathematicians, Statisticians and Actuaries occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since statisticians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for statisticians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

In 2003, Albertans in the Mathematicians, Statisticians and Actuaries occupational group earned earned an average salary of **$58,800 a year** (2003 Alberta Wage and Salary Survey).

Steamfitter-Pipefitter

Produced FEBRUARY 2006

Steamfitter-pipefitters lay out, assemble, fabricate, maintain and repair piping systems which carry water, steam, chemicals or fuel used in heating, cooling, lubricating and other processes.

NOC Number(s): 7252.1
Minimum Education: Apprenticeship Trade - Grade 10
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O i m**

Duties

Steamfitter-pipefitters who install a typical piping system in a commercial building or industrial plant:

- study blueprints, drawings and specifications to determine the type of pipe and tools to use and lay out the sequence of tasks
- make detailed sketches for pipe and equipment fabrication and installation (as required)
- measure, cut, thread, groove, bend, solder, assemble and install metal, plastic and fibreglass pipes, valves and fittings
- join pipe sections and related equipment and secure in position
- use testing equipment to check systems for leaks.

Steamfitter-pipefitters also remove and replace worn components and do general maintenance work. They may also work on plant shut-downs.

Working Conditions

Steamfitter-pipefitters work both indoors and outdoors at physically demanding tasks that often require climbing. The normal work week is 40-hours but overtime may be required to meet construction deadlines. Construction contractors usually require employees to travel and live in rented accommodation or company "on-site" camps. There is some risk of injury when working with power tools and heavy equipment.

Steamfitter-pipefitters may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Steamfitter-pipefitters need the following characteristics:

- physical strength and stamina
- manual dexterity
- mechanical aptitude
- the ability to read and understand complex instructions
- the ability to do careful and precise work.

They should enjoy working with little direction or supervision.

Educational Requirements

To work in Alberta, steamfitter-pipefitters must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 10 education with 65 per cent in Math 10 or 13, Pure Math 10 or Applied Math 10, Science 10, and English 13 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Steamfitter-pipefitter apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- Keyano College in Fort McMurray by mobile delivery at the Suncor site.
- Medicine Hat College
- the Northern Alberta Institute of Technology (NAIT) in Edmonton and Fairview
- Portage College in Lac La Biche
- Red Deer College
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Steamfitter-pipefitters are employed by pipeline construction contractors and sub-contractors, thermal or steam generating plants, manufacturers, utility companies, oil refineries, gas plants, pulpmills and chemical plants.

Experienced steamfitter-pipefitters may advance to supervisory positions such as foreman, sub-contractor, contractor or construction superintendent. Alberta certified journeyman steamfitter-pipefitters who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Steamfitter-pipefitters are part of the larger National Occupational Classification 7252: Steamfitters, Pipefitters and Sprinkler Systems Installers. In Alberta, most people employed in the classification work in the following industries:

- **Construction**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 4,100 Albertans are employed in the Steamfitters, Pipefitters and Sprinkler Systems Installers occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 100 to 150 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since steamfitter-pipefitters form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for steamfitter-pipefitters.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice steamfitter-pipefitters earn at least 50 per cent of the journeyman wage rate in their place of employment in the first year, 60 per cent in the second, 70 per cent in the third and 80 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$24 to $30 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Steamfitters and Pipefitters occupational group working part-time or full-time earned from **$26,600 to $96,600 a year.** The average salary was **$55,600 a year.**

Steel Detailer

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Steel detailers are specialized drafters who produce detailed shop, fabrication and installation drawings.

NOC Number(s): 2253.1, 2253.2
Minimum Education: Designated Occupation
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I O; M I O**

Duties

Engineering or design drawings may lack the level of detail steel fabricators, ironworkers or welders require to manufacture or assemble the girders, beams, columns, stairways and other steel components of buildings and structures. Steel detailers define fabrication requirements by:

- interpreting drawings, blueprints, specifications and the instructions of engineers and architects
- applying industry and government codes
- developing shop drawings, installation drawing specifications, and related instructions.

Senior steel detailers may also be involved in shop and site work, quality control and project supervision.

Working Conditions

Steel detailers usually work in offices. They generally work standard office hours although overtime may be required to meet deadlines.

Personal Characteristics

Steel detailers need the following characteristics:

- the ability to work independently
- good written and verbal communication skills
- the ability to pay attention to detail
- the ability to do precision work
- the ability to visualize spatial relationships and translate abstract concepts into concrete drawings and specifications
- good problem-solving skills.

They should enjoy taking a methodical approach to their work, working in teams, analyzing data, finding innovative solutions to problems and working with precision equipment and instruments.

Educational Requirements

Steel detailer is a **designated occupation** in Alberta. This means that certification is not required but trainees can apply to **Alberta Apprenticeship and Industry Training** for a Level 1, 2, or 3 Alberta Occupational Certificate. Apprenticeship and Industry Training does not offer a training program for this occupation.

Applications for certification must include a Registrar's Letter from the Alberta Chapter of the National Institute of Steel Detailers (NISD) confirming which level of examination they may attempt, or a related occupation certificate earned from another apprenticeship jurisdiction.

On-the-job and technical training for steel detailers may be provided by the **Alberta Chapter of the National Institute of Steel Detailers (NISD)** and employers.

Computer aided drafting/design (CAD) training is also offered at the following post-secondary institutions:

- **Bow Valley College** in Calgary
- **Digital School** in Edmonton
- **Lethbridge Community College**
- **Medicine Hat College**
- the **Northern Alberta Institute of Technology (NAIT)** in Edmonton
- the **Southern Alberta Institute of Technology (SAIT)** in Calgary .

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Steel detailers may be employed by steel fabrication companies, engineering and drafting firms or they may be self-employed. Through the use of information sharing technology, steel detailers can work on projects located anywhere in the world.

Experienced steel detailers can move into estimating, quality control or management. Or, they may operate their own steel detail drafting and design companies. Certified Alberta detailers who has have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Steel detailers are part of the larger National Occupational Classification 2253: Drafting Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 4,150 Albertans are employed in the Drafting Technologists and Technicians occupational group which is expected to grow 1.8 to 2.8 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 70 to 120 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since steel detailers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for steel detailers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the Alberta Occupational Training Committee for this designated occupation, steel detailers earn from **$30,000 to $60,000 a year** at the basic level. Senior steel detailers may earn over **$80,000 a year** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Drafting Technologists and Technicians occupational group working part-time or full-time earned from **$16,600 to $150,100 a year.** The average salary was **$54,600 a year.**

Sterile Processing Technician

Produced AUGUST 2003

Sterile processing technicians gather, disassemble, clean, assemble, sterilize, store and distribute hospital instruments, supplies and equipment for re-use.

NOC Number(s): 3414.5
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M i**

Duties

Sterile processing technicians' primary responsibility is infection control. Their duties vary from one position to another but, in general, they:

- sort, disassemble, clean and disinfect trays, instruments, carts, supplies and equipment
- select and use appropriate cleaning methods
- load, operate and maintain cleaning, sanitizing and sterilization equipment
- perform standard tests to monitor the effectiveness of sterilization procedures
- sort, assemble and package medical/surgical instruments and equipment
- report damaged or malfunctioning equipment and supplies
- store and rotate sterilized items
- provide instrument sets for surgical procedures and case carts for booked and emergency surgery
- inventory, select and replenish supplies to medical/surgical carts on a regular basis, and monitor quota levels and changes in demand levels
- make appropriate substitutions when necessary and report problems regarding availability of instruments and supplies
- use computers to order supplies, and process and maintain records.

Working Conditions

Sterile processing technicians work in health care environments that are noisy, busy, stressful and sometimes hot and humid. They must observe safety precautions to reduce the risk of exposure to infectious diseases and injury from hot surfaces. They are on their feet most of their shift and may routinely lift items weighing up to 10 kilograms.

Hospital central supply and sterile processing departments may operate 24 hours a day so technicians must work shifts that may include nights, weekends and holidays.

Personal Characteristics

Sterile processing technicians need the following characteristics:

- able to stand or walk for long periods of time
- not allergic to latex
- good motor co-ordination, manual dexterity and finger dexterity
- able to work under pressure and pay close attention to details
- good organizational skills
- good communication and teamwork skills
- an interest in contributing to community health and safety.

They should enjoy working with a team, operating equipment and using hand tools, and having clear guidelines and organized methods for their work.

Educational Requirements

(section revised JUNE 2004)

Some sterile processing technicians have been trained on the job but most employers look for applicants who have:

- certification in central sterile processing (or equivalent)
- a high school diploma (or equivalent)
- knowledge of basic medical terminology
- basic computer literacy.

In Alberta, the following post-secondary institutions offer training programs for sterile processing technicians:

- **Lethbridge Community College** offers a 24-week Central Sterile Processing program that includes eight weeks of work experience. The entrance requirement is a high school diploma with at least 60 per cent in English 30 (or 65 per cent in English 33) or equivalent. Biology is preferred. Applicants must submit a criminal record check and medical examination, and have appropriate innoculations prior to practicum placement.
- **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a 21 week Sterile Processing Technician certificate program. The program includes a lab component and eight weeks of work experience at a clinical site. The entrance requirements are a high school diploma or equivalent with at least 50 per cent in English 30-1 (or English 30) or English 30-2 (or English 33), and English language proficiency requirements. Applicants must submit a criminal record check and have appropriate inoculations prior to practicum placement.

Related distance education programs are offered by **Vancouver Community College** in Vancouver and **Purdue University** in West Lafayette, Illinois.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Sterile processing technicians are employed in:

- hospital central processing facilities, operating rooms and day procedure facilities
- doctor's offices
- private health care facilities
- surgical centres.

Without further education, advancement opportunities are limited.

Sterile processing technicians are part of the larger National Occupational Classification 3414: Other Assisting Occupations in Support of Health Services. In Alberta, most people employed in this classification work in the following industries:

- **Retail Trade**
- **Health Care and Social Assistance.**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 7,100 Albertans are employed in the Other Assisting Occupations in Support of Health Services occupational group which is expected to grow 2.0 to 3.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 140 to 220 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since sterile processing technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for sterile processing technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Assisting Occupations in Support of Health Services occupational group working part-time or full-time earned from **$11,900 to $58,200 a year.** The average salary was **$23,700 a year.**

Structural Steel and Plate Fitter

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Structural steel and plate fitters lay out, prepare and assemble structural steel and steel vessels, containers and miscellaneous components.

NOC Number(s): 7263
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: O M I

Duties

Structural steel and plate fitters fabricate:

- structural components for buildings, bridges and other load-carrying structures
- plates for tanks, boilers, pressure vessels and similar products.

Duties vary from one position to another but, in general, structural steel and plate fitters:

- review drawings and discuss them with the customer or with management
- plan the sequence of tasks and decide how to cut the steel most efficiently
- determine the materials required and obtain them from stock
- develop or mark patterns if required
- use metal-working machines and cutting torches to cut steel, drill or punch holes, and roll, bend or press steel into the desired shapes
- assemble and fit metal sections and plates together to form complete units or sub-units
- fasten components together (by mechanical means or tack weld) in preparation for a welder to complete the process.

Working Conditions

Structural steel and plate fitters usually work indoors in shops. They work a 40-hour week with some overtime required to meet construction or fabrication deadlines. There is always some risk of injury when working with heavy materials and power tools.

Structural steel and plate fitters may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Structural steel and plate fitters need the following characteristics:

- physical strength and stamina
- good co-ordination and manual dextity
- mechanical aptitude
- the ability to work in close quarters.

They should enjoy physically demanding tasks.

Educational Requirements

To work in Alberta, structural steel and plate fitters must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Courses in math are particularly important.

The **term of apprenticeship** is three years (three 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Structural steel and plate fitter apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at the Northern Alberta Institute of Technology (NAIT) in Edmonton.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Structural steel and plate fitters are employed by manufacturing, and commercial construction and repair shops in the steel fabrication and oil industries.

Experienced structural steel and plate fitters may advance to supervisory positions. Alberta certified journeyman structural steel and plate fitters who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Structural steel and plate fitters are part of the larger National Occupational Classification 7263: Structural Metal and Platework Fabricators and Fitters. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 700 Albertans are employed in the Structural Metal and Platework Fabricators and Fitters occupational group which is expected to grow 2.3 to 3.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice structural steel and plate fitters earn at least 60 per cent of the journeyman wage rate in their place of employment in the first year, 75 per cent in the second and 90 per cent in the third. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$21 to $32 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Structural Metal and Platework Fabricators and Fitters occupational group working part-time or full-time earned from **$21,000 to $81,000 a year.** The average salary was **$44,800 a year.**

Surface Mining Equipment Operator

Produced AUGUST 2005

Surface mining equipment operators use heavy equipment to recover minerals from near the earth's surface in open pit or strip mining operations.

NOC Number(s): 7421
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: O M i

Duties

In Alberta, the surface mining industry is primarily concerned with mining:

- energy minerals such as coal or heavy oil sands
- non-metallic minerals such as sand, gravel and lime.

The mining methods and equipment used vary with the type and location of mineral.

Surface mining equipment operators typically operate equipment such as:

- backhoes
- large tractor and rubber-tired dozers
- rubber-tired scrapers
- electrical or mechanical drive haul trucks
- graders
- front-end loaders
- service, water or other types of trucks
- draglines
- hydraulic or cable shovels
- utility vehicles/tractors for handling high voltage cables
- packers
- surface mine dewatering equipment
- equipment transporters
- stationary plant or conveyor systems.

Most of the mining done in Alberta is surface coal mining and oil sands mining. Two basic types of mining methods or a combination of both methods may be used:

- **Open pit mining** involves removing the overburden (topsoil, regolith and waste rock) by drilling holes with self-propelled drills in a blasting pattern.
- **Strip mining** uses draglines, cable or hydraulic shovels to remove the overburden and expose the ore.

In most situations, surface mining equipment operators use large front-end loaders or power shovels that may have huge buckets (up to 44 cubic meters in capacity) to load broken overburden and ore into large rear dump trucks (up to 360 metric tons). Truck drivers haul overburden materials to waste dumps and ore to ore processing plants. In some situations, materials are moved by conveyor belt.

Working Conditions

Surface mining equipment operators generally work shifts in environmentally controlled cabs or control rooms. Occasionally, they are required to work outdoors.

Safety precautions and protective equipment (safety boots, gloves, hard hats, glasses and hearing protection) are required to reduce the risk of injury associated with working near or with machinery. Lifting, up to 25 kilograms, may be routinely required.

Personal Characteristics

Surface mining equipment operators need the following characteristics:

- good hand-eye co-ordination to effectively and safely operate large equipment
- good hearing and eyesight
- good health with reasonable strength, agility and stamina
- good spatial perception for judging distances
- a concern for safety and the ability to remain alert while performing repetitive tasks
- a willingness to work a variety of shifts and schedules
- no fear of working in high places.

They should enjoy operating heavy equipment, having clear guidelines and organized methods for their work, and trouble shooting problems.

Educational Requirements

There are no standard education requirements for surface mining equipment operators. Employers generally prefer to hire applicants who have a high school diploma and experience working in a mine environment or operating heavy equipment in an industrial environment. An Alberta Class 5 driver's license is usually required. Construction Safety Training System (CSTS) and Workplace Hazardous Materials Information System (WHMIS) training are definite assets. Applicants may be required to pass a medical exam, pre-employment drug screening test or Differential Aptitude Test (DAT).

In Alberta, **Keyano College** in Fort McMurray offers:

- an eight week Heavy Construction Equipment Operations certificate program which specializes in the operation of crawler tractors, motor scrapers, compactors and skid-steerer loaders. Applicants for this program must be at least 18 years of age, have Grade 10 or equivalent education, have a valid Class 5 driver's licence and be physically fit. An interview is required.
- a ten month Mine Operations Training program that includes three months of paid work experience. Applicants for this program must be at least 18 years of age, have a high school diploma (or GED), have a valid Class 5 driver's license, complete a DAT and attend a personal interview.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check the Keyano College calendar or website.

Companies provide **on-the-job training** that includes an orientation to mine operations and information about health and safety practices, hazardous waste handling, environmental reporting procedures, standard practices and procedures, and waste management.

Employment and Advancement

(section revised JANUARY 2006)

In Alberta, most surface mining equipment operators work in open pit mines that extract oil sand or coal, or in rock quarries.

Surface mining equipment operators usually start as helpers, labourers or truck drivers and, with experience and on-the-job training, advance to larger or more complicated equipment and possibly to supervisory positions.

Surface mining equipment operators may be required to join a union as a condition of employment.

Surface mining equipment operators are part of the larger National Occupational Classification 7421: Heavy Equipment Operators (Except Crane). In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Construction**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

About 12,550 Albertans are employed in the Heavy Equipment Operators (Except Crane) occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 270 to 400 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since surface mining equipment operators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for surface mining equipment operators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Heavy Equipment Operators (Except Crane) occupational group working part-time or full-time earned from **$21,200 to $154,000 a year.** The average salary was **$60,000 a year.**

Swine Technician

Produced FEBRUARY 2005

Swine technicians may be involved in all aspects of hog production or specialize in a particular area such as breeding or caring for pigs at a particular stage of growth.

NOC Number(s): 8253.2
Minimum Education: Less than high school
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M I d**

Duties

Duties vary from one position to another but, in general, swine technicians:

- monitor the health and well being of pigs
- recognize and treat health problems in pigs
- ensure that water is available and pigs are fed the correct amount and type of feed
- monitor barn environments including temperature and air movement
- move animals to other locations the barn in a low stress manner
- carry out breeding and artificial insemination
- assist births
- dock tails, clip teeth and vaccinate, wean and sort pigs
- load hogs for transport
- use high pressure washer systems to clean barns
- maintain equipment and buildings
- keep paper and electronic records (e.g. births, weight gains, health treatments, breeding dates)
- perform general farm duties.

Swine technicians may supervise farm labourers.

Working Conditions

Swine technicians work primarily in barns but may work outdoors in all weather conditions. They must follow safety precautions to avoid injury when working with machinery and tools, wear protective clothing and follow good animal hygiene practices to prevent or control the spread of diseases and parasites. Modern barns are well ventilated and manure is flushed out regularly.

Lifting (up to 25 kg) is routinely required.

Personal Characteristics

Swine technicians need the following characteristics:

- physically fit
- no dust or ammonia allergies
- able to work independently and with others.

They should enjoy taking a methodical approach to farm duties and keeping records, and supervising feeding, health and breeding programs.

Educational Requirements

Many employers are willing to hire and train people who have no previous experience raising pigs if job applicants like animals and are:

- honest, reliable and punctual

- interested in working with pigs
- willing to work hard.

There are **no standard education requirements** in this occupation but, to work independently, swine technicians need knowledge and experience related to:

- swine husbandry (e.g. breeding, farrowing, feeding)
- animal behaviour (e.g. to distinguish between healthy behaviours and signs of illness)
- low stress livestock handling techniques
- safety procedures
- keeping barns clean and sanitary
- maintaining equipment
- keeping paper and electronic records.

The **Alberta Green Certificate Farm Training Program** through **Alberta Agriculture, Food and Rural Development** is an apprenticeship-type program that combines practical on-farm experience and training with formal education in the form of home study courses, workshops, short courses or college agricultural courses. The Green Certificate program offers three levels of training. Level 1 (swine technician) requires approximately six to nine months to complete. Applicants must be at least 15 years of age and have a supportive farm trainer and job site. Trainees who are also high school students can receive high school diploma credits in an approved optional curriculum.

Training Inc., a private vocational school in Lethbridge, offers a six week Swine Technician program. Applicants must have a high school diploma or equivalent, or satisfy mature student admission requirements.

Continuing education courses are offered on an as needed basis through agricultural colleges such as:

- **Lakeland College**
- **Lethbridge Community College**
- **Olds College**.

Employment and Advancement

(section revised JANUARY 2006)

Swine technicians work on farms. Most hog farms are family owned operations; about half have one or two employees. However, swine production operations are getting bigger and more specialized. For example, farms may specialize in breeding and producing piglets, raising piglets to market weight or raising purebred hogs to sell as breeding stock.

Those who successfully complete Level 1 of the Alberta Green Certificate Farm Training program may progress to Level 2 (production supervisor) and Level 3 (farm business manager).

Swine technicians are part of the much larger National Occupational Classification 8253: Farm Supervisors and Specialized Livestock Workers. In Alberta, over 75 per cent of people employed in this classification work in the **Agriculture** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and events affecting overall employment (especially in the Agriculture industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,050 Albertans are employed in the Farm Supervisors and Specialized Livestock Workers occupational group which is expected to grow up to 0.5 per cent each year from 2005 to 2010 in Alberta. (**Note**: Since swine technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for swine technicians.)

There is a high turnover rate in this occupation and employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Farm Supervisors and Specialized Livestock Workers occupational group working part-time or full-time earned from **$16,800 to $105,100 a year.** The average salary was **$30,100 a year.**

Systems Auditor

Produced JULY 2004

Systems auditors conduct independent third-party reviews to assess the quality of software products, applications and information systems including hardware, networks and facilities.

NOC Number(s): 2171.4
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M D I**

Duties

(section revised OCTOBER 2005)

Systems auditors review, evaluate and provide pro-active, control-related advice regarding:

- the effectiveness of systems policy, standards and procedures
- the performance of computer information systems and software
- the security and control systems that protect the integrity and security of systems and data
- the development of new business and information systems.

In general, systems auditors work with staff and management of the organization being audited to assess the completeness, accuracy, validity and efficiency of information processing systems against acknowledged internal and external criteria (e.g. ISO 9000, EN29000, Sarbanes-Oxley, COBIT). While complying with standards, they must also take specific conditions into account.

Specific duties vary from one position to another in this evolving occupation. For example, systems auditors may:

- evaluate the accuracy, completeness and timeliness of transaction processing in business systems
- review application systems and business procedures to determine if they are achieving business objectives
- review the use of computing facilities
- assist in other financial and operational audits and projects.

Systems auditors spend a considerable amount of time consulting with people and writing reports. Their reports must be clear and logical.

Working Conditions

Systems auditors work in office environments with sophisticated information technology. They usually work standard weekday hours except when overtime is required to meet project deadlines.

Some positions require a significant amount of travel.

Personal Characteristics

Systems auditors need the following characteristics:

- the ability to learn quickly, think logically and understand abstract relationships
- the ability to pay close attention to details
- excellent oral and written communication skills
- excellent interpersonal and negotiation skills
- the ability to plan, organize and control several projects at the same time
- a keen interest in keeping up with ever-changing technology.

They should enjoy working with people from a wide variety of backgrounds and solving problems.

Educational Requirements

This is not an entry level position. The work requires knowledge of business practices, information management **and** computer technology. Therefore, systems auditors need a combination of related post-secondary education and experience in technical, accounting and business roles. For descriptions of related roles, see the Accountant, Internal Auditor, Information Systems Quality Assurance Analyst and Systems Security Analyst profiles. Employers generally prefer to hire applicants who have a degree in accounting, computer science or a related field, and professional certification.

There are a wide variety of degree and diploma programs related to computer science and accounting offered by universities, colleges, technical institutes and private vocational schools throughout Alberta. For information about accounting programs and designations (CA, CGA, CMA), see the Accountant occupational profile. For information about computer science programs, see the Computer Programmer occupational profile.

Before enrolling in any program, prospective systems auditors should discuss accounting and computer science education options with people already working in this field.

Other Requirements

Successful completion of an examination is required to qualify for the Certified Information Systems Auditor (CISA) designation from the Information Systems Audit and Control Association.

Information Systems Professional is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself an Information Systems Professional, you must be a registered member of the Canadian Information Processing Society of Alberta (CIPS Alberta). You do **not** have to be registered if you do not call yourself an Information Systems Professional.

Employment and Advancement

(section revised JANUARY 2006)

Systems auditors are employed by large organizations in the private and public sectors, and by consulting firms.

Experienced systems auditors may advance to senior management positions.

Systems auditors are part of a larger computer systems analysts occupational group. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Oil and Gas Extraction**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 16,050 Albertans are employed in the Information Systems Analyst and Consultants occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 350 to 520 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since systems auditors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for systems auditors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for systems auditors vary depending on their education and experience, and the responsibilities of their positions.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Information System Analysts and Consultants occupational group working part-time or full-time earned from **$27,900 to $112,700 a year.** The average salary was **$70,800 a year**.

Systems Security Analyst

Produced JULY 2004

Systems security analysts are computer specialists who assess administrative, physical and technical security risks to data, software and hardware, and develop policies, procedures and contingency plants to prevent or minimize the effects of security breaches and concerns.

NOC Number(s): 2171.2
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M I D**

Duties

Systems security analysts plan, co-ordinate and implement security measures for information systems:

- control access to computer data files
- ensure that authorized users don't do things that might compromise data
- prevent hackers (people who are not supposed to have access to the data) from disabling computers or seeing, modifying or destroying the information they contain.

Duties vary from one job to another depending on the employer and the sensitivity of the information. However, in general, systems security analysts:

- develop plans to safeguard computer files and meet emergency data processing needs
- co-ordinate the implementation of computer systems plans with other people in the organization and outside vendors
- assist in implementing legislated information protection requirements (e.g. privacy requirements)
- test systems to make sure security measures are working
- modify security files to change user permissions, correct errors or install new software
- consult with other computer specialists and organizational personnel about issues such as data access requirements and programming changes
- monitor the use of data files and regulate access to safeguard data
- write reports to document computer security and emergency measures policies, procedures and test results
- conduct compliance audits to ensure that security standards and policies are being followed.

To keep up to date with new developments, systems security analysts share information via e-mail, use web-based resources that send out alerts about new threats (e.g. computer viruses), attend technical training courses and conferences, and read computer-related journals, magazines and newsletters.

Working Conditions

Systems security analysts usually work standard office hours in offices that are equipped with sophisticated information technology. They may be required to work overtime when there has been a security breach.

Analysts who work for consulting companies may be required to travel.

Personal Characteristics

Systems security analysts need the following characteristics:

- the ability to think logically and analyze complex problems
- the ability to remain alert while performing routine tasks
- the decisiveness, creativity and flexibility required to meet security challenges and solve problems quickly
- a high degree of honesty and integrity
- the ability to communicate and get along well with users, other computer specialists and managers throughout the organization

- a keen interest in keeping up to date with new developments.

They should enjoy analyzing information and solving problems, taking a methodical approach to tasks requiring precision and consulting with others.

Educational Requirements

(section revised NOVEMBER 2005)

Systems security analysts need related post-secondary education and several years of related experience (see the Computer and Network Operator, Computer Programmer and Systems Tester occupational profiles). Employers generally prefer to hire experienced applicants who have a four year bachelor's degree or two year diploma in computer science or a related discipline.

Systems security analysts must continuously upgrade their knowledge because systems and security threats are constantly changing.

In Alberta, universities, colleges, technical institutes and private vocational schools offer a wide variety of degree, diploma and certificate programs related to computer science. For a list, see the Computer Programmer profile.

The following Alberta institutions offer programs specifically related to systems security:

- **Alberta Career Computer Center Inc.**, a private vocational school in Edmonton, offers a 26-week Security Certified Network Professional program. The entrance requirements are a high school diploma with a Grade 12 English and Math or any Grade 11 Math or equivalent. All students must have previously completed IT designation/certification (e.g. MCSA, MCSE, CNE, CCNA, CCNP, etc.) and/or at least 2 years relevant work experience and/or a degree from a recognized university and/or a diploma from a recognized post secondary institution. They must also have Police Security clearance.
- **CDI College of Business, Technology and Health Care** in Calgary and Edmonton offers a 49-week Network and Internet Security Specialist certificate program. The entrance requirement is a high school diploma with English 30 or 33 and Math 30 or 33 or equivalent.
- **Concordia University College of Alberta** in Edmonton offers a 15-month after degree diploma in Information Systems Security that includes a three month practicum. Applicants must have an acceptable average in a degree program, have at least six credits in math and 18 credits in senior-level computing sciences courses, and pass security clearance requirements.
- **Northern Alberta Institute of Technology (NAIT)** in Emonton offers Continuing Education certificate programs in System Security and Microsoft Windows Systems Administrator - Security and Internet Services Specialty.
- **Prestwick College**, a private vocational school in Calgary offers a 35-week Certified Security Specialist program. The entrance requirement is a high school diploma with Grade 12 English and math, or equivalent.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Information Systems Professional is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself an Information Systems Professional, you must be a registered member of the Canadian Information Processing Society of Alberta (CIPS Alberta). You do **not** have to be registered if you do not call yourself an Information Systems Professional.

Employment and Advancement

(section revised JANUARY 2006)

Systems security analysts are employed by organizations that have a web presence (website, FTP site, e-mail service, etc.) and by consulting firms.

When firms hire consulting firms to perform security functions, they still need inhouse personnel to ensure that consulting agreements are functioning as intended. These inhouse positions usually have a strong internal compliance component related to auditing and privacy compliance.

Advancement generally takes the form of more responsibility. The best and brightest systems security analysts may become sneakers who identify security holes by deliberately cracking systems.

Systems security analysts are part of a larger computer systems analysts occupational group. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Oil and Gas Extraction**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 16,050 Albertans are employed in the Information Systems Analyst and Consultants occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 350 to 520 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since systems security analysts form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for systems security analysts.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for systems security analysts vary depending on their education and experience, and the responsibilities of their positions.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Information System Analysts and Consultants occupational group working part-time or full-time earned from **$27,900 to $112,700 a year.** The average salary was **$70,800 a year.**

Systems Tester

Produced JULY 2004

Systems testers execute test plans to evaluate the performance of computer software, information systems and telecommunication systems.

NOC Number(s): 2283
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M O i**

Duties

Developing and implementing software applications and information and telecommunication systems involves a great deal of testing for bugs (errors/faults), reprogramming to correct bugs and testing again to make sure the new programming works and has not created new bugs. Complex applications require several testing cycles because different types of testing are needed at different stages of development and implementation. For example, a system may be tested to determine first how it works on its own, then how it works in a network environment.

Duties and responsibilities vary from one job to another but, in general, systems testers:

- review and analyze development documents
- develop test plans
- prepare test cases, test scripts and test data
- run tests and do some exploratory testing
- ensure that software specifications are met and the software doesn't crash (stop working) even when it is used in ways developers may not have anticipated (e.g. clicking on inappropriate areas of the screen)
- document results (keep detailed records about what they did that resulted in an error message so programmers can replicate the problem and figure out what caused it).

They may also:

- prepare for testing by installing computer hardware and software (including operating system software)
- look for bugs in any automated testing tools they use.

Systems testers usually work closely with other computer specialists such as system developers (see the Computer Programmer occupational profile) and quality assurance analysts (see the Information Systems Quality Assurance Analyst profile).

Working Conditions

Systems testers work standard office hours in office environments. Evening or weekend work may be required to meet project deadlines.

Personal Characteristics

Systems testers need the following characteristics:

- the ability to think logically and analytically
- the ability to follow instructions and pay close attention to detail
- the ability to communicate clearly and tactfully
- the ability to work well in teams and on their own.

They should enjoy taking a methodical approach to tasks requiring precision, analyzing information to solve problems and consulting with others.

Educational Requirements

Systems testers are usually graduates of post-secondary programs related to computer science or training programs offered by software vendors. Some employers require job applicants to have certification or training in a specific type of software.

Systems testers must continuously upgrade their knowledge because computer technology is constantly changing.

In Alberta, universities, colleges, technical institutes and private vocational schools offer a wide variety of degree, diploma and certificate programs related to computer science. For a list, see the Computer Programmer occupational profile. Prospective systems testers should talk to potential employers about required and preferred qualifications before enrolling in an education or training program.

Other Requirements

(section revised OCTOBER 2004)

Information Systems Professional is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself an Information Systems Professional, you must be a registered member of the Canadian Information Processing Society of Alberta (CIPS Alberta). You do **not** have to be registered if you do not call yourself an Information Systems Professional.

Employment and Advancement

Systems testers are employed wherever software applications, information systems and telecommunication systems are developed and implemented.

Experienced testers who have the required training and experience may move into computer programmer or quality assurance analyst positions, or positions related to the types of systems they have experience testing. For example, those experienced in testing interactive media applications (e.g. computer games), web-based software or database applications (e.g. Internet programs) may move into interactive media developer, web developer or database analyst positions.

Systems tester is a new and rapidly growing occupation.

Salary

(section revised OCTOBER 2005)

Salaries for systems testers vary considerably, depending on the responsibilities of the position and the tester's education and experience.

According to the **2005 Alberta Wage and Salary Survey**, Albertans with three years of experience working part-time or full-time in the Systems Testing Technicians occupational group earned from **$34,600 to $46,300 a year.** The average salary was **$38,200 a year.**

Taxi Driver

Produced JULY 2003

Taxi drivers operate automobiles and vans to transport passengers from one place to another.

NOC Number(s): 7413.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M S

Duties

Taxi drivers charge passengers a fee based on the distance and time driven. In general, they:

- pick up passengers or meet passengers in response to a dispatched call or a pre-arranged booking
- help passengers board or leave the taxi
- provide directions and information about the area, town or city
- report by radio and/or computer monitor to a central dispatcher
- drive vehicles safely and efficiently to desired destinations
- collect fares and make change
- clean vehicles daily
- perform routine meter and maintenance checks (e.g. check the tires and oil levels)
- ensure that their vehicles meet mechanical safety standards.

Working Conditions

Driving a taxi can be emotionally and physically demanding. Drivers work in all types of weather and road conditions, and may routinely lift luggage and other items weighing up to 25 kilograms. Many drivers work ten hours or more each day, often six days a week. Some drivers prefer to work night shifts because there is less traffic.

Personal Characteristics

Taxi drivers need the following characteristics:

- the ability to remain diplomatic and courteous in dealing with the public, from their first passenger to their last passenger of the day
- the motor co-ordination, manual dexterity and spatial perception required to safely operate a vehicle
- resourcefulness for dealing with difficult passengers
- a neat personal appearance and willingness to keep their vehicles clean
- an awareness of passengers' comfort and safety needs
- self-discipline.

They should enjoy driving vehicles, having clear rules and guidelines for their work and dealing with people.

Educational Requirements

There are **no standard education requirements**. However, taxi drivers must:

- have an Alberta Class 4 driver's license
- be able to communicate well and provide good customer service
- have a thorough knowledge of local house numbering systems and the locations of important buildings and landmarks
- have a municipal taxi permit and no criminal convictions (a criminal abstract must be obtained from the police).

Some municipal taxi commissions require permit applicants to successfully complete a two day course for new drivers.

Demerit points and moving convictions are monitored by the municipality and individual cab companies. Often, cab companies will not allow drivers to work if they have more than six demerit points.

Employment and Advancement

(section revised JANUARY 2006)

Most taxi drivers are self-employed. Some drivers own their own vehicles; others prefer to lease or rent a vehicle.

Taxi drivers are part of the larger National Occupational Classification 7413: Taxi and Limousine Drivers and Chauffeurs. In Alberta, most people employed in this classification work in the **Transportation and Warehousing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Transportation and Warehousing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 4,650 Albertans are employed in the Taxi and Limousine Drivers and Chauffeurs occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 60 to 120 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since taxi drivers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for taxi drivers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Most drivers work on a flat rate per shift: the driver pays a certain amount per day to the company for using the cab, and revenues over that amount belong to the driver. Some work part-time or have other jobs as well.

Out of their earnings, owner-drivers must pay expenses such as gas, oil, repairs, car payments and stand rent. This may leave little profit. Another option is to hire another driver to drive the cab on a second shift so the car runs almost 24 hours a day.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Taxi and Limousine Drivers and Chauffeurs occupational group working part-time or full-time earned from **$12,600 to $42,600 a year.** The average salary was **$19,700 a year.**

© Government of Alberta, Human Resources and Employment

Technical Sales Representative

Produced OCTOBER 2003

Technical sales representatives sell technical goods and services to government, commercial and industrial establishments. They may sell commodities such as computers, software and business machines or services such as technical analysis and consulting services.

NOC Number(s): 6221
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O S i**

Duties

Technical sales representatives are sometimes called account executives, sales engineers or account managers. In general, they are responsible for:

- identifying sales opportunities
- identifying key customer requirements and showing customers how their organizations' products or services satisfy those requirements
- negotiating and closing sales deals
- following-up with customers to ensure customer satisfaction and expand business opportunities
- maintaining and updating data about their territories and accounts.

This requires that technical sales representatives know:

- their company's business strategy and product lines
- how products are used
- competitors' products and strategies
- their customers' needs.

Technical sales representatives spend much of their time visiting prospective buyers or "prospecting" sales.

Most technical companies designate specific territories for their sales representatives. Sales territories may be geographical, by market segment (e.g. medical, legal) or by type of organization (e.g. government department, bank, oil company).

Working Conditions

The technical sales field is highly competitive. Companies may set goals or quotas and offer prizes to those who make the most sales. Because their incomes often depend on commissions, technical sales representatives are under constant pressure to maintain and expand their client base.

Many technical sales representatives work long hours. They may be required to entertain customers in the evening.

Some technical sales representatives have large geographic territories and travel frequently. They may be away from home for several days or weeks at a time.

Personal Characteristics

Technical sales representatives need the following characteristics:

- self-confidence, persistence, initiative and enthusiasm
- good communication and negotiating skills
- the ability to build rapport and gain trust
- the organizational skills and self-discipline required to manage their time effectively
- the ability to work independently and as part of a team
- the ability to cope with uncertainty, stress and long hours.

They should enjoy persuading people to purchase goods or services and analyzing information to identify and solicit potential clients.

Educational Requirements

Most employers prefer to hire technical sales representatives who have **technical qualifications plus several years of experience working with the type of product they sell.** For example, depending on the industry, employers may be looking for a background in equipment operation, trades, business administration, marketing, engineering, computer science, pharmacy or agriculture. Computer skills are often required.

Suitable post-secondary programs are offered by universities, colleges and technical institutes throughout Alberta. Entrance requirements vary depending on the program and the institution. In general, however, the entrance requirement for:

- two year diploma programs is a high school diploma or equivalent with appropriate courses at the Grade 12 level.
- for degree programs is an average of at least 60 per cent (70 per cent for some programs) in English 30 and four other appropriate Grade 12 subjects (e.g. Pure Math 30, Social Studies 30, 30-level sciences).

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employers often offer product-specific **in-house training** programs for technical sales representatives, ranging in length from a few weeks to several months. Training programs may be offered in locations other than the sales representative's home base.

Sales representatives must keep up to date with technological changes affecting their customers' companies.

Employment and Advancement

(section revised JANUARY 2006)

Technical sales representatives work for:

- technical and industrial equipment manufacturers and resellers
- computer software firms
- engineering and technology service firms
- pharmaceutical companies.

They may be employed full-time or be self-employed contractors.

Advancement opportunities depend on the size and nature of the company, and the individual's sales abilities. Many companies require front-line sales experience for advancement to senior level positions.

Technical sales representatives are part of the larger National Occupational Classification 6221: Technical Sales Specialists - Wholesale Trade. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Wholesale Trade**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 14,750 Albertans are employed in the Technical Sales Specialists - Wholesale Trade occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 300 to 460 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since technical sales representatives form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for technical sales representatives.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Most technical sales representatives work on a straight commission basis; some have salaried positions. Some companies offer a base salary plus commission or an incentives system of payment. Company cars (or car allowances) and expense accounts are common in this occupation.

Total earnings vary considerably depending on the type of product being sold and the industry.

According to the **2005 Alberta Wage and Salary Survey**, Albertans with three years of experience working part-time or full-time in the Technical Sales Specialists - Wholesale Trade occupational group earned from **$22,600 to $144,200 a year.** The average salary was **$59,100 a year**.

© Government of Alberta, Human Resources and Employment

Technical Writer

Produced JUNE 2005

Technical writers translate complex technical information into simpler language. They shape and deliver information to meet the needs of a target audience.

NOC Number(s): 5121.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M o**

Duties

Technical writers produce information for audiences ranging from novices to technical experts. In general, they:

- research subjects by analyzing reference materials (e.g. specifications, blueprints, diagrams, maintenance manuals, reports, studies), consulting experts and using products themselves
- analyze how to structure and format information to meet target audience needs
- write content for on-line help files, reference materials, procedural and policy manuals, user guides, proposals, technical reports and instructional materials that explain the installation, operation and maintenance of mechanical, electronic and other equipment (e.g. oil industry equipment or computer applications)
- rewrite and edit drafts after they have been reviewed by technical experts for accuracy
- manage documentation projects.

They also may define terms, index or cross-reference information, or obtain copyright permissions to reprint material.

Technical writers may work independently or as part of a team that includes scientists, engineers, computer specialists, management personnel, editors, other writers, illustrators or photographers.

Working Conditions

Technical writers employed by medium-sized or large organizations generally work standard office hours although they sometimes work overtime to meet deadlines. Freelance writers can set their own hours but must be prepared to work long hours when required to complete projects on time. The pressure associated with having to meet deadlines can be stressful.

Personal Characteristics

Technical writers need the following characteristics:

- adaptability and flexibility
- the ability to communicate and work effectively with a variety of people (e.g. engineers, publishers, editors, art directors, film producers, readers of varying ability)
- the ability to deal with and learn from criticism
- good organizational, time management and project management skills.

They should enjoy gathering and synthesizing information, taking a methodical approach to explaining procedures, and finding out how things are built and operate.

Educational Requirements

There are no standard education requirements for technical writers but they generally need:

- a good grasp of grammar and the ability to express ideas clearly in writing
- some knowledge of technology
- research, interviewing and analytical skills
- editing and proofreading skills.

Practical writing and design layout experience gained through part-time or entry-level positions with publishing companies, newspapers or magazines is an asset.

Employers generally prefer to hire technical writers who have related post-secondary education or experience and can supply samples of their work.

Post-secondary institutions throughout Alberta offer communications-related courses as part of certificate, diploma and degree programs offered full-time, part-time and by distance education. The following institutions offer programs specifically related to technical writing:

- **Grant MacEwan College** in Edmonton offers a four year Bachelor of Applied Communications degree program in Professional Writing with a specialization in technical writing and a paid practicum. The entrance requirement is a high school diploma or equivalent with an average of at least 65 per cent in English Language Arts 30-1 (or English 30) and four other 30 level subjects selected from specified groups. Applicants also must submit three samples of their written work and successfully complete a two hour test.
- **Mount Royal College** in Calgary offers a four year Bachelor of Applied Communications degree program with a specialization in technical communication. The admission requirement is a high school diploma or equivalent with an average of at least 60 per cent in English Language Arts 30-1 (or English 30) and four other appropriate Grade 12 subjects.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Continuing education programs are often offered on an as needed basis.

Technical writers must keep their skills and knowledge up to date through professional development activities such as taking continuing education courses, attending workshops and conferences, reading and communicating with others in their field.

Employment and Advancement

(section revised JANUARY 2006)

Technical writers may be employed full-time, part-time or on a contract basis by public organizations or businesses such as:

- software development companies, Internet design firms and multimedia content providers
- publishers
- corporate communications and human resource departments
- manufacturing firms
- construction companies and safety organizations
- research laboratories
- oil and gas companies
- military contractors
- educational institutions
- government departments
- pharmaceutical companies.

Experienced technical writers may advance to supervisory or management positions. Those who have the required knowledge and skills may move into a related occupation such as editor, graphic designer, videographer, translator, interactive media developer, or private trainer or facilitator.

Technical writers are part of the larger National Occupational Classification 5121: Authors and Writers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

Over 2,450 Albertans are employed in the Authors and Writers occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since technical writers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for technical writers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to a 2002 salary survey conducted by the Alberta Chapter of the Society of Technical Communication, the average income of Alberta technicial writers who have two to six years of experience was about **$43,700 per year**. The average annual income reported in Alberta was about **$60,600 per year.**

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Authors and Writers occupational group working part-time or full-time earned from **$15,300 to $85,400 a year.** The average salary was **$42,600 a year.**

Telecommunications Engineering Technologist

Produced FEBRUARY 2004

Telecommunications engineering technologists research, design, implement, analyze, manage and integrate wired and wireless voice and data networking and communications devices and systems.

NOC Number(s): 2241.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: O I M

Duties

Telecommunications engineering technologists work with devices and systems involving the transmission and reception of information, including the following technologies:

- voice, digital data and video (broadcast and cable)
- fibre optic, networking and optical switching
- wireless (e.g. radio, television, satellite, microwave, cellular)
- voice over information processing (a method of moving voice conversation over the Internet)
- computers and associated devices
- local and wide area networks
- broadband technologies
- traditional telephone systems (switching, transmission and multiplexing technologies).

Telecommunications engineering technologists may be involved in:

- the implementation, analysis, maintenance, management and integration of telecommunications systems and equipment
- the research and design of telecommunications systems
- the manufacture of telecommunications devices and systems
- technical sales and product representation of telecommunications systems (for more information, see the Technical Sales Representative occupational profile).

Duties and responsibilities therefore vary from one position to another but, in general, telecommunications engineering technologists:

- research, design, implement, analyze, manage and integrate telecommunications systems
- plan, draw and analyse analog and digital electronic circuits related to telecommunications systems
- assist in the production and quality control of telecommunications systems and products
- implement software upgrades and hardware expansions for telecommunications and information processing networks
- prepare and present business and technical reports and plans.

Working Conditions

Telecommunications engineering technologists may work in offices, workshops or production departments. Occasionally, they work in equipment areas that may be in sheltered or unsheltered environments. Some travel may be required when commissioning or maintaining equipment. Lifting equipment weighing up to 25 kilograms is sometimes required.

Hours of work vary and may include evenings, weekends and holidays. Telecommunications engineering technologists may be required to work overtime to meet deadlines or deal with emergencies.

Personal Characteristics

Telecommunications engineering technologists need the following characteristics:

- an aptitude for and interest in science and mathematics
- analytical and problem-solving skills
- leadership skills
- pa ience and persistence combined with good time management skills
- excellent oral and written communication skills
- fine motor skills and good eye-hand co-ordination
- the ability to work alone and with a team
- the ability to work under the pressure of deadlines
- good customer service skills
- a commitment to life long learning.

They should enjoy:

- working with tools, equipment, instruments and machinery at tasks requiring precision
- analyzing problems and finding innovative solutions
- taking a methodical approach to building and testing systems
- supervising others.

Educational Requirements

(section revised SEPTEMBER 2005)

Telecommunications engineering technologists need at least two years of related post-secondary education or an equivalent combination of education and experience. They need an understanding of:

- network security practices and systems
- processes surrounding the implementation of information processing (IP) and telecommunications networks
- hybrid networks that are wired/wireless or combine IP and legacy telecom network interfaces.

In Alberta, the following institutions offer programs in telecommunications technology:

- the **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Telecommunications Engineering Technology diploma program. The minimum admission requirement is a high school diploma with English 30 or 33, one of Physics 30, Chemistry 30 or Science 30, and Pure Math 30 or Math 30 or 33 or successful completion of Transitional Mathematics 101 or at least 65 per cent in Algebra 35.
- the **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Telecommunications Technology diploma program. The minimum admission requirement is a high school diploma or equivalent with Pure Math 30 and English Language Arts 30-1 or English Language Arts 30-2 and a minimum 20 level science.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised JULY 2005)

Certification with the Alberta Society of Engineering Technologists (ASET) is voluntary.

Under Alberta's Engineering, Geological and Geophysical Professions Act, Registered Professional Technologists - Engineering must be ASET members to engage in a defined scope of engineering practice as registered by the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA).

Employment and Advancement

(section revised JANUARY 2006)

Telecommunications engineering technologists are employed by:

- cable and satellite communication companies
- wireless and fibre optic companies
- public and private telecommunications companies
- federal, provincial and municipal governments
- colleges, universities and technical institutes

- companies in the oil and gas industry
- private contracting and consulting organizations
- personal consulting services.

Experienced telecommunications engineering technologists may advance to supervisory and management positions.

Telecommunications engineering technologists are part of the larger National Occupational Classification 2241: Electrical and Electronics Engineering Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Information, Culture and Recreation**
- **Other Manufacturing**
- **Oil and Gas Extraction**
- **Public Administration**
- **Educational Services**
- **Management, Administrative and Other Support Services**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 6,500 Albertans are employed in the Electrical and Electronics Engineering Technologists and Technicians occupational group which is expected to grow 2.4 to 3.4 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 150 to 230 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since telecommunications engineering technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for telecommunications engineering technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for telecommunications engineering technologists vary considerably.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Electrical and Electronics Engineering Technologists occupational group working part-time or full-time earned from **$22,100 to $126,100 a year.** The average salary was **$74,400 a year.**

For more detailed information, see ASET's Annual Salary Surveys.

Telemarketer

Produced NOVEMBER 2005

Telemarketers call potential customers to sell goods and services, request donations or conduct surveys.

NOC Number(s): 6623.4
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M s d**

Duties

Telemarketers may telephone businesses or private individuals to:

- identify potential customers and arrange appointments for sales demonstrations
- build relationships with current and potential customers
- solicit sales for goods or services
- ask for donations for charitable causes
- conduct market or client surveys.

They may obtain names and telephone numbers from lists of previous customers or donors, reply cards from magazines, lists obtained or purchased from other sources, telephone directories or Internet searches.

Duties and responsibilities vary from one organization to another but, in general, telemarketers:

- telephone prospective customers to describe the service or merchandise offered, or to solicit information for surveys
- deliver prepared sales talks that are designed to initiate conversations about products and services, and persuade customers to buy
- answer questions and quote prices
- record names, addresses, purchases and reactions, or sign people up to attend sales presentations.

Working Conditions

Telemarketers may work flexible hours from their own homes, or work shifts in an automated office environment. Evening and weekend work is usually required.

Personal Characteristics

Telemarketers need the following characteristics:

- a pleasant telephone voice that conveys sincerity and confidence
- tenacity, a strong sense of self-esteem and a sense of humour
- good organizational skills
- the ability to work independently or as part of a team
- the ability to perform repetitious tasks and deal with the stress of handling rejections
- the ability to think quickly and answer smoothly and tactfully.

They should enjoy taking a methodical approach to their work, persuading people and distributing information to other workers.

Educational Requirements

There are no minimum education requirements for telemarketers but most employers prefer to hire high school graduates. Sales experience, strong keyboarding skills and the ability to speak more than one language are definite assets.

Telemarketers are usually trained on the job. They need to learn about the product or service they promote so they can talk about it confidently and answer questions correctly.

Employment and Advancement

(section revised JANUARY 2006)

Telemarketers are employed by:

- organizations with in-house telemarketing departments
- service bureaus that contract out telemarketing services to other companies and charities.

Experienced telemarketers may advance to supervisory, training or script writing positions.

Telemarketers are part of the larger National Occupational Classification 6623: Other Elemental Sales Occupations. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Retail Trade**
- **Management, Administrative and Other Support Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 6,250 Albertans are employed in the Other Elemental Sales Occupations group which is expected to grow 0.7 to 1.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 110 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since telemarketers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for telemarketers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Telemarketers may be paid an hourly wage or work on commission. Earnings for those who work on a commission basis may be higher but vary from month to month depending on how much they sell.

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Telephone Solicitors and Telemarketers occupational group ranged from **$8,200 to $23,600 a year.** After three years, salaries ranged from **$10,900 to $31,500.** The average salary was **$18,100 a year**.

Telephone Operator

Produced SEPTEMBER 2002

Telephone operators operate computerized or conventional telephone systems to complete connections for telephone calls and provide information to customers.

NOC Number(s): 1424
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: M S O

Duties

Duties vary from one employer to another in this occupation. In general, however, telephone operators:

- complete connections for telephone calls including local, long distance (domestic and overseas), coin telephone, mobile radio/telephone and emergency calls
- provide directory information or rate and route information and assistance to customers
- provide relay service for the deaf and hard of hearing
- calculate and record charges as required and bill and credit accordingly
- set up conference calls in different locations and time zones, and handle business, message or other special service calls
- promote company products, services and saving plans when appropriate
- complete required reports and studies.

As telecommunications technology advances, more of this work is being done by computers and other communication tools such as voice mail systems.

In addition to telephone duties, operators may be required to operate fax machines, help with office administration duties or handle special projects and assignments.

Working Conditions

Telephone operators work in modern office environments. They often work shifts, including weekends and holidays. Compensation for split shifts, late shifts or weekend shifts may take the form of reduced hours or additional pay. Some operators work part-time.

Personal Characteristics

Telephone operators need the following characteristics:

- good hearing and a clear speaking voice
- a pleasant manner and a service-oriented attitude
- good spelling and keyboarding skills, and basic mathematical skills
- the ability to concentrate on the customer's request and work quickly and accurately
- good communication skills including questioning skills
- the ability and patience required to deal effectively with emergency and stressful situations
- the tact needed to deal with the occasional customer who is persistent or rude.

They should enjoy having clear rules and organized methods for their work, dealing with people and operating telephone systems.

Educational Requirements

Most employers require their telephone operators to have **a high school diploma** plus one year of experience in customer service. Computer skills and the ability to speak a second language are definite assets.

Telephone operators are **trained on the job**. New employees may not be assigned to telephone operator positions until they have worked for the organization long enough to be familiar with its operations.

Telus Communications Inc. conducts in-service training sessions for new employees in centres throughout Alberta. Four to five months of post-training experience is generally required before operators are ready to handle the average load. A six-month probationary period is required.

Employment and Advancement

(section revised JANUARY 2006)

In Alberta, telephone operators are employed primarily by Telus Communications. Operators who have been with the company for a number of years may train for and move to other positions in the organization. Competition for better-paying positions is keen.

In Alberta, over 75 per cent of people employed as telephone operators work in the following industries:

- **Information, Culture and Recreation**
- **Management, Administrative and Other Support Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 750 Albertans are employed in the Telephone Operators occupational group which is expected to grow up to 0.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Technological innovations and conversions to call centre operations will continue to limit employment growth in this occupation (for more information, see the Call Centre Agent occupational profile).

Salary

Salaries for telephone operators range from about **$12 to $18 per hour (2002 estimate).**

Television Audio/Video Operator

Produced APRIL 2003

Audio and video operators set up, prepare and operate television audio and video broadcasting equipment.

NOC Number(s): 5225
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M I

Duties

Audio operators set up, prepare, operate and adjust audio recording, editing and reproducing equipment at television stations and remote broadcast locations. In general, they work at audio consoles or with computers to:

- mix sound inputs or feeds
- regulate the volume and technical quality of sound during the production of pre-recorded and live television broadcasts
- edit audio material before and after productions.

During a production or broadcast, audio operators bring in required sound elements at pre-determined times. Sometimes, they must co-ordinate a number of audio feeds with a television picture. Feeds may include pre-recorded material, records, compact discs, digital audio devices and videotapes, as well as inputs from live microphones, satellites or microwave trucks.

Videotape operators, sometimes called VTR operators, prepare and operate videotape and non-linear computer equipment at television stations and remote broadcast locations. In general, they:

- set up and load videotapes as required for broadcast each day
- import station programming, commercials and promotional materials into non-linear playback servers
- prepare and operate videotape and non-linear playback equipment during the production of live and pre-recorded programming
- edit videotapes and add video and/or sound as required
- monitor and record program, commercial, news and promotional feeds
- ensure that videotapes are available for scheduled recording or production
- set up and operate slow-motion video recording and playback equipment.

During production, VTR operators monitor the sound and picture being recorded and inform the director about malfunctions which could affect the quality of the recorded program. During news productions, they playback all video and sound elements required in the program.

Master control operators monitor, record and playback all signals and programs entering and leaving a station. With the introduction of computerized editing and recording equipment, VTR and master controls are often combined.

Switchers, also known as production switchers or video switchers, work at an electronic console in a control room where they select video sources specified by the director during television videotaping sessions and live broadcasts. Switchers integrate program components from sources such as live cameras, videotape, video servers, and special effects and graphic equipment. In general, switchers:

- program computerized switcher functions
- superimpose on-screen graphics such as titles and credits that are fed from electronic video graphics equipment
- mix or dissolve between sources and insert special effects used to make a transition from one video source to another
- program digital video effects units.

At some television stations, switchers may also direct television productions.

Video editors use linear and non-linear editing systems to blend video recordings together and add video effects, music and audio effects. In general, they:

- set up and operate automated videotape edit controllers and electronic titling units
- operate computer editing systems, video switching equipment and digital video effects units
- assemble raw footage according to scripts or the instructions of a director or producer
- program digital graphic effects
- incorporate audio sound with footage.

Graphics operators, sometimes called electronic video graphics operators or character generator operators, use computer software to generate opening titles, sub-titles and closing credits and may design graphic backgrounds and animations as well. In general, they:

- design lettering and logos
- design other graphics such as clouds or rain for a weather forecast
- capture video pictures and prepare graphic stills
- create and develop graphic art including animation or special effects.

Advancements in graphics technology have made it possible for electronic video graphic operators to produce increasingly sophisticated graphics, including three-dimensional animation.

Working Conditions

Depending on their responsibilities, audio and video equipment operators may work entirely at a station or at various remote locations as well. Most operators work rotating shifts that include afternoons, evenings, weekends and holidays. Coping with tight schedules and deadlines can be stressful.

Personal Characteristics

Audio and video equipment operators need the following characteristics:

- good motor co-ordination
- the ability to remain alert while performing routine, repetitive tasks
- creativity and artistic ability
- excellent communication and interpersonal skills for working with others in a team environment.

They should enjoy using electronic equipment to perform tasks requiring precision and trouble-shooting problems.

Educational Requirements

(section revised FEBRUARY 2006)

Audio and video equipment operators need **related post-secondary education**. In Alberta, the following institutions offer related programs:

- **Canadian School of Modern Broadcasting**, a private vocational school in Edmonton, offers a 17 week Radio Broadcasting program. Applicants must be at least 18 years of age, have a high school diploma with at least 60 per cent in English 30 or 33, or equivalent, and have the approval of the Program Co-ordinator.
- **Grant MacEwan College** in Edmonton offers a two year Digital Arts and Media diploma program. The entrance requirement is a high school diploma with at least 65 per cent in English 30 and Math 30, or equivalent, and successful completion of an accredited Introductory MacIntosh computer course or equivalent.
- **Lethbridge Community College** offers a two year Communication Arts diploma program. The entrance requirement is a high school diploma with at least 60 per cent in English 30 (70 per cent in English 33) at least 60 per cent in Social Studies 30. An interview and a 500 word composition are also required.
- **Mount Royal College** in Calgary offers a two year Broadcasting diploma program. Entrance requirements include a high school diploma or equivalent, keyboarding skills, a portfolio, testing and an interview.
- The **Northern Alberta Institute of Technology** in Edmonton offers a two year Radio and Television diploma program. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English 30 or 33 and at least 50 per cent in Grade 11 math, science and social studies (grade 12 courses recommended).
- The **Southern Alberta Institute of Technology** in Calgary offers a two year Broadcast Technology diploma program. The entrance requirement is a high school diploma with English 30 or 33 and Pure or Applied Math 30 or equivalent.

Quota programs at public colleges and technical institutes are often oversubscribed so higher than minimum marks are generally required to gain admission.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Audio and video equipment operators work for:

- television networks, speciality channels and local broadcast stations
- film, video and concert production companies
- cable television public access programming channels
- sound recording companies
- video production and editing companies.

Competition is keen in the broadcasting field so inexperienced people should be willing to start at small stations and work in a number of different areas.

Freelancing has become the trend in broadcasting. Increasingly, freelancers are producing programming for new channels as well as existing ones. Contract employment can also be found producing "in-house" programs such as corporate videos (e.g. for safety and technical training, recruiting, sales and marketing). To be successful, freelancers must be talented but also be able to establish a network of contacts and make themselves available when needed. A significant investment in equipment may be required to compete and maintain successful businesses.

Experienced audio and video operators may move into more specialized positions. For example, VTR operators may become VTR editors. Operators may also advance to technical supervisory positions and, if they have the necessary ability and experience, they may eventually become directors or producers.

Television audio and video operators are part of the larger National Occupational Classification 5225: Audio and Video Recording Technicians. In Alberta, over 75 per cent of people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 850 Albertans are employed in the Audio and Video Recording Technicians occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since television audio and video operators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for television audio and video operators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for audio and video operators vary depending on the size of the operation.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Audio and Video Recording Technicians occupational group working part-time or full-time earned from **$21,500 to $58,600 a year.** The average salary was **$39,200 a year.**

Television Camera Operator

Produced APRIL 2003

Television camera operators operate television cameras and related equipment to record news, live events and productions for television broadcast.

NOC Number(s): 5222
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M I

Duties

Camera operators work in studios and on location. In general, they:

- move the camera and operate the optical controls (e.g. focus, zoom, exposure)
- follow instructions from the director concerning the mood or dramatic effect to be achieved
- make minor electronic adjustments to cameras.

They may also:

- maintain and store camera equipment
- assist with the lighting and staging of broadcast productions
- set up and operate live location shoots.

Electronic news gathering (ENG) and electronic field production (EFP) camera operators use portable cameras to televise and record news events, sports events and reports at remote locations. Camera operators working with ENG or EFP equipment may also set up recording, lighting and playback equipment for field productions. They are responsible for producing the visual content of news items and achieving the desired visual content for commercials or program productions.

Working Conditions

Depending on the size of the broadcast company and studio, camera operators may work alone or as part of a team of camera operators. They may work entirely at a station or at various remote locations as well. Most operators work rotating eight-hour shifts which means that they may be required to work afternoons, evenings, weekends and holidays.

Television camera operators may be required to lift equipment weighing up to 25 kilograms. Coping with tight schedules and deadlines can be stressful.

Personal Characteristics

Television camera operators need the following characteristics:

- excellent motor co-ordination
- good vision and hearing
- stamina (particularly for field work)
- an interest in electronic technology
- the ability to remain alert while performing routine, repetitive tasks and respond to the unexpected quickly
- creativity and artistic ability
- good communication and interpersonal skills for working with others in a team environment.

They should enjoy operating, testing and maintaining camera equipment, and working with others.

Educational Requirements

(section revised MARCH 2005)

A background in journalism is a definite asset for ENG camera operators. Many stations prefer to hire reporters who can shoot and edit their own stories (for more information, see the Reporter occupational profile).

In Alberta, the following institutions offer related post-secondary programs:

- **Grant MacEwan College** in Edmonton offers a two year Digital Arts and Media diploma program. The entrance requirement is a high school diploma with at least 65 per cent in English 30 and Math 30, or equivalent, and successful completion of an accredited Introductory MacIntosh computer course or equivalent.
- **Lethbridge Community College** offers a two year Communication Arts diploma program. The entrance requirement is a high school diploma with at least 60 per cent in English 30 (70 per cent in English 33) at least 60 per cent in Social Studies 30. An interview and a 500 word composition are also required.
- **Mount Royal College** in Calgary offers a two year Broadcasting diploma program. Entrance requirements include a high school diploma or equivalent, keyboarding skills, a portfolio, testing and an interview.
- The **Northern Alberta Institute of Technology** in Edmonton offers a two year Radio and Television diploma program. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English 30 or 33 and at least 50 per cent in Grade 11 math, science and social studies (Grade 12 courses recommended).
- The **Southern Alberta Institute of Technology** in Calgary offers a two year Broadcast Technology diploma program. The entrance requirement is a high school diploma with English 30 or 33 and Pure or Applied Math 30 or equivalent.

Quota programs are often oversubscribed so higher than minimum marks are generally required to gain admission.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Competition is keen in the broadcasting field so inexperienced camera operators must be willing to start at small stations. Once operators have gained experience in small stations, they can move to positions in larger stations or specialize in a particular type of work.

Freelancing has become the trend in broadcasting. Contract employment can also be found in producing in-house programs such as corporate videos (e.g. for safety and technical training, recruiting, sales and marketing). To be successful, freelancers must be talented but also able to establish a network of contacts and make themselves available when needed. A significant investment in equipment may be required to compete and maintain successful businesses.

Experienced camera operators can advance to technical supervisory positions and, if they have the necessary ability and experience, eventually become directors or producers.

Television camera operators are part of the larger National Occupational Classification 5222: Film and Video Camera Operators. In Alberta, people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 600 Albertans are employed in the Film and Video Camera Operators occupational group which is expected to grow 1.1 to 2.1 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since television camera operators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for television camera operators.) Sophisticated automated equipment is decreasing the need for studio camera operators.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Film and Video Camera Operators occupational group earned **up to $67,500 per year.** The average salary was **$31,500 per year**

Theatre Director

Produced SEPTEMBER 2003

Theatre directors make artistic decisions about stage productions and consult with producers about everything from selecting the story or idea, the cast and sometimes the crew to overseeing rehearsals.

NOC Number(s): 5131.2
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I D S

Duties

Theatre directors may work in many areas, styles and genres of theatre or specialize in one or two. For example, they may specialize in new works, mainstream theatre, collective theatre, musical theatre, popular theatre, theatre for young audiences, movement theatre, issue-based theatre, women's theatre or improvisational theatre. Directors may choose scripts themselves or work with scripts chosen by the people who have hired them.

Theatre directors work collaboratively with set, lighting, costume and sound designers, choreographers, special effects technicians and others. Their responsibilities vary from one production to another but, in pre-production, directors generally:

- study, analyze, interpret and research the script
- audition and engage actors for roles and may participate in the selection of designers as well
- work with designers to determine a stylistic approach for the production
- work with stage managers to arrange schedules for rehearsals, costume fittings and sound/light development
- instruct stage managers regarding management of the show when the director is gone
- work with producers to establish and administer budgets
- work with production managers to meet production needs within budget
- work with technical directors regarding technical requirements
- conduct rehearsals
- consult with publicity agents regarding poster design and notes in the program.

With new works, theatre directors may also consult with playwrights about changes to the script or "workshop" a script by rehearsing it with the playwright and actors to create a final rehearsal draft of the play.

During rehearsals, theatre directors:

- shape the work by describing the emotional, historical and psychological world of the play and guiding actors so the overall production communicates the director's vision
- block actors (tell them how, where and when to move on stage), provide encouragement and make suggestions to help actors interpret characters
- make all final design decisions including lighting, props, furnishings, makeup and hair.

Often a play has one or more dress rehearsals with an audience before opening night. This gives directors one last chance to make changes. When a play opens, the director's job is complete in most cases. However, in small theatre companies, directors may introduce the play and meet with the audience after the show to discuss their interpretation of the play.

Working Conditions

Theatre directors usually rehearse a play for two to four weeks before the first public performance. During this time, they usually work a six-day week of eight-hour days but the last few days before opening night may be longer.

Rehearsals are generally conducted in theatres which may range in size and style from basement rooms to concert halls.

Personal Characteristics

Theatre directors need the following characteristics:

- the communication skills required to convey their vision, energy and enthusiasm to others
- the ability to visualize sets etc. in three dimensions
- the ability to command respect
- the interpersonal skills required to help performers reach their full potential and develop a network of supporters and contacts
- a willingness to accept financial, artistic, psychological and emotional risks
- the ability to manage time and personnel to meet deadlines.

They should enjoy being innovative, controlling and co-ordinating the work of others, and dealing with people.

Educational Requirements

(section revised JUNE 2005)

Many theatre directors are experienced actors or writers. (Sometimes, they wrote the play they are directing.) Some theatre directors are former stage managers. For information about education options in these occupations, see the Actor, Creative Writer and Stage Manager occupational profiles.

The **University of Alberta** in Edmonton and the **University of Calgary** offer two year Master of Fine Arts (MFA) degree programs with a specialization in directing theatre. The entrance requirement is an acceptable average in a four year bachelor's degree program at a recognized institution (or equivalent). Candidates should have a background of training or involvement in theatre practice and sufficient preparation in dramatic literature and theatre history.

In Alberta, the following post-secondary institutions offer **four year** bachelor's degree programs in drama:

- The **University of Alberta**. The entrance requirement is a high school diploma or equivalent with an average of at least 65 per cent in English 30, a 30-level language other than English or Math 30 or Pure Math 30, and three other approved Grade 12 subjects (Social Studies 30 is recommended). The Augustana Faculty in Camrose offers three and four year Bachelor of Arts (BA) degree programs in Drama. The University of Alberta also offers a four year BFA degree program in Technical Theatre.
- The **University of Calgary**. The entrance requirement is a high school diploma or equivalent with an average of at least 72 per cent in English 30 and four of the following subjects: Social Studies 30, Pure Math 30, Applied Math 30, Math 31, Biology 30, Chemistry 30, Physics 30, Science 30, a 30-level language other than English, Drama 30, one five credit Grade 12 subject.
- The **University of Lethbridge**. The entrance requirement is an average of at least 65 per cent in English 30 or English Language Arts 30 and three other appropriate 30-level subjects, plus a fifth Grade 12 subject.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward bachelor's degree programs. **Keyano College** in Fort McMurray offers a two year Drama program. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Theatre directors must have five to ten years of related experience as well as related education. Prospective directors should obtain hands-on experience in as many areas of theatre production as possible and make as many contacts as possible in their field.

To gain experience, aspiring theatre directors may:

- offer their services to amateur or school groups
- work as assistants to established directors or producers
- form a small theatre company to produce one or more plays on their own
- enter play festivals (e.g. Fringe Festivals in Edmonton, Saskatoon and Vancouver) with their own productions to showcase their talents.

Most theatres hire artistic directors for a whole season who may, in turn, hire guest directors to direct some plays. There are very few artistic director positions in Canada.

Theatre directors are part of the larger National Occupational Classification 5131: Producers, Directors, Choreographers and Related Occupations. In Alberta, most people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,950 Albertans are employed in the Producers, Directors, Choreographers and Related Occupations group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since theatre directors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for theatre directors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for theatre directors are dependent on experience and reputation. Directors who work on a contract basis negotiate their fees before production begins. In some cases, theatre directors' salaries fall under an agreement set by the Canadian Actors' Equity Association.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Producers, Directors, Choreographers and Related Occupations group working part-time or full-time earned from **$16,200 to $108,800 a year.** The average salary was **$46,800 a year.**

Tilesetter

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Tilesetters cover, repair and decorate exterior and interior walls, floors and other surfaces using ceramic, mosaics, marble and quarry tile, slate, stone, terrazzo or granite.

NOC Number(s): 7283
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M I**

Duties

Tilesetters who install various types of tile:

- reinforce the surface or build an underbase (if required)
- prepare, measure and mark the surface to be covered
- determine the best layout to achieve the desired pattern in a given space
- cut and trim tiles to cover odd spaces and fit tile around obstacles and openings
- mix, apply and spread adhesives such as mortar, cement, mastic or epoxy over the surface
- set tiles or groups of tiles into position, align the tiles and tap them into place, then
- pack grout (a fine mortar) into joints and remove the excess.

Tilesetters may also:

- install terrazzo surfaces by scattering and rolling marble chips or other aggregates over a mortar base, and polishing it by hand or machine
- cut, surface, polish and install marble and granite
- install pre-cast terrazzo, granite or marble units
- remove and replace cracked or damaged tile
- prepare cost estimates and orders.

Working Conditions

Tilesetters work both indoors and outdoors. There is considerable bending, kneeling and reaching involved in the work. They generally work a five-day, 40-hour week, but overtime may be required to meet construction deadlines. There is also some risk of injury when working with sharp edges, power tools and from heavy lifting.

Tilesetters may be required lift materials, equipment and tools items weighing over 25 kilograms.

Personal Characteristics

Tilesetters need the following characteristics:

- manual dexterity
- the ability to complete tile installation projects working from architectural plans and specifications
- the ability to do precision work
- the ability to work with little supervision.

They should enjoy creating products that require precise skills.

Educational Requirements

To work in Alberta, tilesetters must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified

journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:
- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from the local area.

The **term of apprenticeship** is three years (three 12-month periods) that include a minimum of 1,600 hours of on-the-job training and eight weeks of technical training in the first and second year and a minimum of 1,600 hours of on-the-job training in the third. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at the Southern Alberta Institute of Technology (SAIT) in Calgary.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Tilesetters are employed by special trade, building and general contractors. Those who are self-employed usually contract their services for smaller renovation projects.

Many tilesetters stay in the trade until they retire. Others advance to supervisory positions such as foreman or superintendent. Alberta certified journeyman tilesetters who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, most people employed as tilesetters work in the **Construction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:
- trends and **events** affecting overall employment (especially in the Construction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 950 Albertans are employed in the Tilesetters occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice tilesetters earn at least 60 per cent of the journeyman wage rate in their place of employment in the first year, 70 per cent in the second and 80 per cent in the third. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$18 to $28 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans with three years of experience working part-time or full-time in the Tilesetters occupational group earned from **$37,400 to $56,200 a year.** The average salary was **$42,200 a year**.

Tool and Die Maker

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Tool and die makers build and repair the special tools, metal moulds and patterns used in manufacturing.

NOC Number(s): 7232.1
Minimum Education: Apprenticeship Trade - Grade 11
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I M**

Duties

Tool and die makers use precision metal-working machines and hand tools to build, repair and modify custom-made prototypes, tools (e.g. jigs, fixtures, gauges, dies, moulds, press tools) and small mechanical devices.

Duties vary from one position to another but, in general, tool and die makers:

- plan the project, working from blueprints, models or verbal instructions
- choose, measure and mark metal stock or castings
- use a variety of machine tools to machine parts to close tolerances, and may apply heat treatments
- check the accuracy of their work and assemble the parts
- test the completed device for proper operation.

Working Conditions

Tool and die makers usually work indoors in tool rooms or machine shops. They generally work a 40-hour week with some overtime required to meet production schedules. Shift work may be required. There may be some risk of injury when working with power tools and from flying bits of metal.

Tool and die makers may be required to lift items weighing up to 25 kilograms.

Personal Characteristics

Tool and die makers need the following characteristics:

- the ability to work quickly, patiently and accurately
- phsycial strength and stamina
- good mechanical ability
- the ability to visualize a finished product
- logical reasoning ability.

They should enjoy doing precision work and decision-making.

Educational Requirements

To work in Alberta, tool and die makers must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 11 education with Math 10 or 13, Applied Math 10 or Pure Math 10 (or equivalent) or pass an entrance exam pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Tool and die workers also require a good understanding of metallurgy.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,560 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Tool and die maker apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- the Southern Alberta Institute of Technology (SAIT) in Calgary
- the Northern Alberta Institute of Technology (NAIT) in Edmonton.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Tool and die makers are employed in industries that manufacture metal working machinery, tools and dies, automobiles, aircraft, electrical machinery, fabricated metal products and plastics.

Most tool and die makers are employed in central Canada. Few become tool designers or open their own tool and die shops.

Experienced tool and die makers may advance to supervisory positions. Alberta certified journeyman tool and die makers who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, over 75 per cent of people employed as tool and die makers work in the following industries:

- **Metals, Metal Fabricaton and Machinery Manufacturing**
- **Other Manufacturing**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 350 Albertans are employed in the Tool and Die Makers occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Tool and die makers who are experienced with computer-controlled machine tools may have an advantage when seeking employment.

Salary

Apprentice tool and die makers earn at least 55 per cent of the journeyman wage rate in their place of employment in the first year, 65 per cent in the second, 75 per cent in the third and 85 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$16 to $22 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Tool and Die Makers occupational group working part-time or full-time earned an average salary of **$38,300 a year**.

Tour Guide

Produced JUNE 2003

Tour guides escort individuals or groups of people on tours and describe points of interest.

NOC Number(s): 6441.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: S M d

Duties

In general, tour guides:

- greet tourists and describe the content and length of the tour
- conduct people on tours of cities, local points of interest, historical sites or establishments such as legislative buildings, cathedrals, bars or wineries
- provide information about the area, related events, features and facts of interest to the group
- answer questions and distribute information/promotional materials
- ensure that tourists follow applicable safety regulations and rules of conduct
- implement emergency evacuation procedures should the need arise.

Tour guides may also:

- operate transportation vehicles (e.g. buses, boats or limousines) as well as provide a running commentary
- find out as much as possible about the groups they will be guiding beforehand to select points of interest and provide commentary appropriate for the age and interests of the group.

Step-on tour guides frequently work with out-of-town coach drivers who may be unfamiliar with local sightseeing routes. Step-on guides must know the local routes and traffic disruptions (e.g. road construction), and be able to provide clear, timely directions as well as narrate the tour.

Establishment or on-site tour guides escort visiting groups through facilities such as museums, art galleries, night clubs, industrial plants, historical sites or public buildings. In addition to the duties listed above, they may:

- interpret history and culture as it relates to the site
- assist with reception or office administration duties
- escort or drive visitors to their destinations
- show audiovisual presentations or select appropriate music
- conduct educational activities for specific groups (e.g. school children or people whose first language is not English).

For information about guides who escort groups on holiday tours, see the Travel Guide occupational profile. For information about mountaineering, hunting and fishing guides, see the Outdoor Sport/Recreation Guide occupational profile.

Working Conditions

Tour guides may be on their feet for much of the working day, pointing out spots of interest and answering questions. They may work irregular hours, including evenings and weekends, and may have to work through meal times. They may work on a volunteer, part-time, seasonal or contract basis.

Personal Characteristics

Tour guides need the following characteristics:

- the ability to create a friendly, enthusiastic atmosphere
- the ability to communicate effectively with groups of different sizes and ages
- knowledge related to the nature of the tours they conduct

- the ability to respond to unexpected situations quickly and effectively (first aid training is recommended)
- a good memory for details
- lots of patience.

They should enjoy meeting and talking to people and sharing information.

Educational Requirements

Tour guides employed on a full-time basis must be mature. Summer guiding positions are often filled by university students. Knowledge of the history of the area or establishment or subjects related to the tour (e.g. art, crafts, horticulture, ethnic cultures), and the ability to speak more than one language are definite assets. Some employers require applicants to have CPR and standard first aid training.

Tour guides are **trained on the job.** After an initial training period, some companies require tour guides to pass an examination to ensure that company standards are met.

Other Requirements

Guides who operate vehicles must have **appropriate licenses** and may be tested again as part of the job interview process.

Employment and Advancement

(section revised JANUARY 2006)

Tour guides may be volunteers, or employed by tour operators or the organizations that own or operate the facilities concerned. They may be employed full-time, only for the summer months or part-time on a year-round basis.

Experienced tour guides may advance to supervisory positions but advancement opportunities are generally limited and require the ability to train new guides.

Tour guides are part of the larger National Occupational Classification 6441: Tour and Travel Guides. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 350 Albertans are employed in the Tour and Travel Guides occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since tour guides form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for tour guides.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Tour and Travel Guides occupational group working part-time or full-time earned from **$14,300 to $47,100 a year.** The average salary was **$27,800 a year.**

Toxicologist

Produced FEBRUARY 2005

Toxicologists investigate the possible harmful effects on living things of chemical agents (e.g. drugs, pesticides, food additives), physical agents (e.g. ionizing and electro-magnetic radiation) and biological agents (e.g. plant and animal toxins).

NOC Number(s): 2121.2
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

Toxicologists investigate the hazards of chemical, physical and biological agents at different levels of exposure. Their goal is to improve industrial safety, and public and environmental protection through a better understanding of the hazards to which living species are exposed.

In general, toxicologists:

- conduct laboratory studies on substances (e.g. drugs, food additives, solvents, herbicides) or on energy (e.g. radiation) to determine their effects on laboratory animals, plants and human tissue
- conduct research to develop new tests for use in toxicological studies
- evaluate potential risks based on levels and periods of exposure
- analyze and evaluate data gathered from studies and reliable scientific publications to determine appropriate controls for various chemical and physical hazards
- develop standards or guidelines for safe levels of chemical and physical agents in workplaces, air, food or drinking water
- provide advice and scientific information to policy and program developers concerning the health and legal aspects of chemical use
- supervise and co-ordinate the activities of technologists and technicians.

Analytical toxicologists specialize in detecting natural products such as venoms or plant poisons, toxic man-made chemicals and the metabolites of ingested substances.

Clinical (biomedical) toxicologists work in medical environments or pharmaceutical companies investigating the effects of drugs or other chemicals on the human body. They may be part of a medical team responding to emergencies such as drug overdoses, or they may monitor drug therapies for patients who have certain types of diseases (e.g. epilepsy or asthma).

Environmental toxicologists study the effects of chemical, physical and biological agents on humans and other organisms, and determine levels of toxins in the environment.

Forensic toxicologists examine post-mortem tissues for drugs and poisons in deaths that are suspicious, unexpected or for which there is no anatomical cause. They are concerned with the medical and legal aspects of impairment or death related to drugs, including alcohol, and often testify in court. Forensic toxicologists may also assist in training police in the operation of breath testing equipment.

Industrial toxicologists test new products (e.g. pesticides, drugs) for manufacturers to determine a product's toxicity during production (for industrial workers) and use (for consumers).

Nutritional toxicologists test food additives and new food products, and investigate interactions of additives with nutrients in foods to determine their safety for consumers.

Regulatory toxicologists develop appropriate controls for safe uses of new chemical products such as industrial chemicals, agricultural chemicals, pharmaceuticals and cosmetics.

Risk assessment toxicologists study the possible consequences of exposure to toxicants and develop guidelines for safe exposure levels.

Veterinary toxicologists investigate health problems or non-infectious diseases of unknown cause in animals, usually domestic or zoo species.

Working Conditions

Toxicologists work in offices, laboratories, industrial facilities and outdoors. Testing new products often involves conducting experiments on animals or studies on "in vitro" preparations (including isolated cells), and using sophisticated equipment such as atomic absorption spectrometers, mass spectrometers, electron microscopes, flow cytometers and chromatography systems. Toxicologists must pay careful attention to safety procedures when handling toxic materials and substances of unknown toxic potential. Safety procedures vary with the task and may require simple protection (gloves and mask) to full body suit and the use of an isolated room.

Toxicologists may work alone or in teams. Some overtime may be necessary for work that requires strict time schedules. Travel may be required to collect field samples, testify at hearings or in court, respond to emergencies or crisis situations, or attend scientific meetings.

Personal Characteristics

Toxicologists need the following characteristics:

- the perseverance and intellectual ability required to think critically and answer complex questions
- patience and an eye for detail
- the ability to be organized and methodical in their work
- the ability to work well alone or as part of a team
- an understanding of why live animals are sometimes used for testing.

They should enjoy synthesizing information and solving problems, working with instruments and equipment at tasks requiring precision, and directing the work of others.

Educational Requirements

The minimum education requirement for toxicologists is an appropriate **bachelor's degree.** Most toxicologists have advanced (master's or doctoral) degrees in toxicology or a related area. A doctoral (PhD) degree is usually required to direct and administer research programs or to teach at the college or university level.

Different specializations require different academic backgrounds. For example, veterinary toxicologists must become veterinarians first, then take an advanced degree in toxicology.

Toxicology is an interdisciplinary science which draws from diverse fields including biology, chemistry, biochemistry, pharmacology, mathematics, physiology, pathology, immunology and genetics.

In Alberta, no post-secondary institution offers a full program in toxicology. However, courses in toxicology are offered at:

- **Concordia University College of Alberta** in Edmonton in a Bachelor of Environmental Health (After Degree) program.
- the **University of Alberta** in Edmonton in a graduate degree program in Occupational Medicine, Department of Public Health Sciences, Faculty of Medicine; in both bachelor's and graduate degree programs in the Department of Pharmacology, Faculty of Medicine and Dentistry; and in the bachelor's degree program in the Faculty of Pharmacy and Pharmaceutical Sciences.
- the **University of Calgary** in a bachelor's degree program in Environmental Sciences.

In Canada, degree programs in toxicology are often interdisciplinary programs which may be offered jointly by more than one faculty or department at the same post-secondary institution. Admission requirements for bachelor's degree programs therefore vary but generally include a high school diploma with 30 level courses in English, chemistry, biology and math. Some post-secondary institutions base admission to their toxicology programs on students' grade point averages in a previous year of university studies. Prior to enrolling in any program, prospective students are strongly advised to discuss their academic qualifications and career plans with faculty members at the post-secondary institution(s) of their choice.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Toxicologists are employed by pharmaceutical and food manufacturers, biotechnology companies, governments, universities, hospitals, research centres and consulting firms. A few work in the chemical and petrochemical industries. Some positions are funded by "soft money" which is obtained by applying to granting agencies and are therefore temporary.

Salary increases and growing research and advisory responsibilities are the most tangible forms of advancement in this occupation. There are relatively few administrative and supervisory positions.

Toxicologists are part of the larger National Occupational Classification 2121: Biologists and Related Scientists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,100 Albertans are employed in the Biologists and Related Scientists occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since toxicologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for toxicologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Employment growth is best for environmental toxicologists and environmental risk assessment toxicologists.

Salary

(section revised SEPTEMBER 2005)

Toxicologists' salaries vary depending on their qualifications and the nature of their work.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Biologists and Related Scientists occupational group working part-time or full-time earned from **$17,000 to $99,400 a year.** The average salary was **$64,600 a year.**

Traffic Co-ordinator

Produced MAY 2003

Traffic co-ordinators prepare daily program logs (listings of the programming, including commercials, that will be put on the air on particular broadcast days) in the radio and television industry.

NOC Number(s): 1473
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I s**

Duties

Duties vary from one station to another but, in general, traffic co-ordinators:

- create daily logs by entering information supplied by station program and sales departments and the national network concerning programming and commercial air time sold
- enter the times and length of regular news, sports, traffic and weather reports, commercials and station identifications, regularly scheduled and special programs and, at some stations, public service announcements
- juggle commercials, program promotions and short fill programs to fit into available time and separate commercials for the same or similar products
- ensure suitability for audiences and time slots and that daily logs follow broadcast guidelines set by the Canadian Radio-television and Telecommunications Commission
- keep the sales department informed about commercial air time still available in each broadcast day.

Although work usually begins on program logs weeks in advance of the broadcast days concerned, additions and deletions may be made right up until air time.

Before the broadcast day, traffic co-ordinators retrieve the log from the computer and distribute copies to all appropriate station personnel. Depending on the station, traffic co-ordinators may also give a copy of the log to the station's accounting department for billing purposes, or prepare billing information themselves.

In some stations, traffic co-ordinators have additional responsibilities such as dealing with media schedulers and buyers from advertising agencies or handling contest prizes and give-aways.

Working Conditions

Traffic co-ordinators work standard office hours in an office environment. Handling volumes of detailed work and dealing with last-minute changes can be stressful.

Personal Characteristics

Traffic co-ordinators need the following characteristics:

- the ability to get along well with many different people
- the ability to do detailed work efficiently and ensure that each day's program log is accurate and complete
- a good memory
- good organizational skills
- the ability to work under the pressure of constant deadlines.

They should enjoy coordinating and monitoring the flow of information in a station or agency, operating computerized systems and dealing with people.

Educational Requirements

Traffic co-ordinators need **a high school diploma.** A high school business education program with courses in keyboarding, business mathematics and bookkeeping is a definite asset. Most employers prefer to hire people who already have a working knowledge of computers, Windows software and word processing programs.

Some employers require applicants to have training or experience in radio and television broadcasting. For information about post-secondary programs in broadcasting, see the Announcer occupational profile.

Employment and Advancement

(section revised JANUARY 2006)

Traffic co-ordinators are employed by:

- radio and television stations
- advertising agencies
- media sales companies.

Television traffic operations are generally centralized in large urban centres.

Many smaller organizations have only one employee, a traffic manager, working on the program log. These organizations generally prefer to hire people who have some previous broadcast experience or at least some previous clerical experience. At stations where there are only a few commercials to be logged, the traffic manager may also be the station's bookkeeper or secretary-receptionist.

Experienced traffic co-ordinators can become traffic managers or move into other departments such as accounting.

Traffic co-ordinators are a small part of the larger National Occupational Classification 1473: Production Clerks. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Other Manufacturing**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Oil and Gas Extraction**
- **Wholesale Trade**
- **Construction**
- **Transportation and Warehousing**
- **Retail Trade**
- **Health Care and Social Assistance**
- **Petrochemicals, Rubber, Plastics and Chemicals Manufacturing**
- **Mineral Products Manufacturing**
- **Management, Administrative and Other Support Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,450 Albertans are employed in the Production Clerks occupational group which is expected to grow 1.1 to 2.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since traffic co-ordinators form only a small part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for traffic co-ordinators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Production Clerks occupational group working part-time or full-time earned from **$14,500 to $193,700 a year.** The average salary was **$37,900 a year.**

However, in general, salaries for traffic co-ordinators are not as high as they are for other types of production clerks.

Traffic Manager

Produced OCTOBER 2003

Traffic managers direct and co-ordinate the transportation of incoming materials from suppliers or raw material sources and outgoing products to distribution houses and customers.

NOC Number(s): 0713.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **D M s**

Duties

Duties and responsibilities may vary from one position to another but, in general, traffic managers:

- manage transportation costs and provide the transportation service levels required to meet company objectives
- schedule the dispatching of goods and track goods in transit (or supervise others who perform these tasks)
- prepare and control transportation budgets
- negotiate with various carriers (air, water, rail, road or pipeline), maintain their own private fleet or a combination of both
- develop systems for operations analysis
- train employees and administer safety programs
- supervise specialists such as rate clerks and claims supervisors
- develop transportation policy and write procedures
- evaluate locations for new warehouses and distribution networks
- evaluate freight costs and the inventory costs associated with transit times.

In smaller organizations, traffic managers may also:

- personally monitor shipments
- co-ordinate deliveries
- issue shipping instructions
- provide routing information
- trace and expedite shipments
- do customs work, including meeting trade requirements
- advise sales and billing departments of transportation charges for customers' accounts
- lease or buy new equipment
- arrange for storage facilities when required
- maintain a vehicle fleet to safe standards and acceptable levels of cleanliness.

Working Conditions

Traffic managers usually work in an office environment. Depending on the size and nature of the organization, they may have to do some travelling. In large organizations, they may be required to work shifts because goods must be shipped seven days a week, 24 hours a day.

It is not unusual for traffic managers to work overtime, often under pressure. Regardless of weather conditions or mechanical breakdowns, they must make sure that shipments reach customers on time and in good condition.

Personal Characteristics

Traffic managers need the following characteristics:

- the ability to analyze information
- strong decision-making skills
- sound business judgement

- a good memory for details
- the ability to work quickly and accurately with figures
- good verbal and written communication skills
- creative problem-solving abilities.

They should enjoy co-ordinating information and directing the work of others, taking a methodical approach to monitoring and planning operations, and negotiating with service providers, workers and other managers.

Educational Requirements

There is no standard education requirement for traffic managers. However, employers generally prefer to hire job applicants who have **post-secondary education related to commerce or business administration plus related work experience.** Strong computer skills are essential.

Certificate, diploma and degree programs in business administration and management are offered by post-secondary institutions throughout Alberta. Entrance requirements vary depending on the program and the institution. However, in general, the entrance requirement for:

- one year certificate and two year diploma programs is a high school diploma or equivalent with Grade 12 English and math.
- four year degree programs in commerce or management is an average of at least 70 per cent in English 30, Pure Math 30 (or equivalent) and three other approved or specified Grade 12 subjects (e.g. 30-level sciences or languages other than English).

The **Canadian Institute of Traffic and Transportation** offers continuing education courses and a ten-course Diploma in Distribution Logistics Management program. Successful completion of the diploma program and a minimum of five years of work experience in the field leads to the professional designation CITT. The continuing education program is intended for the ongoing professional development of Institute members.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Traffic managers are employed by:

- transport companies (truck, rail, courier)
- raw material suppliers
- manufacturing firms
- chain stores or other large businesses that distribute large volumes of goods
- government departments and agencies.

Those who have no previous training or related experience may start in supporting positions such as rate clerk, route clerk, shipper/receiver or warehouse technician. Those who have related post-secondary education may start in positions of greater responsibility.

Advancement opportunities depend on the size and nature of the organization and the individual's performance and qualifications.

Traffic managers are part of the larger National Occupational Classification 0713: Transportation Managers. In Alberta, over 75 per cent of people employed in this classification work in the **Transportation and Warehousing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Transportation and Warehousing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 2,450 Albertans are employed in the Transportation Managers occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 80 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since traffic managers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for traffic managers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for traffic managers vary widely depending on the industry, the responsibilities of the position and the background of the manager.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Transportation Managers occupational group working part-time or full-time earned from **$21,700 to $130,400 a year.** The average salary was **$61,000 a year.**

Translator

Produced MARCH 2005

Translators convert written text from one language to another, sometimes changing the structure of the original text but without changing the meaning.

NOC Number(s): 5125.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M I d**

Duties

The process of translating from one language to another often includes:

- conducting research before beginning the actual translation
- compiling terminology information
- revising, editing, proof-reading and checking translated material.

Translators generally convert texts into their mother tongue. To meet tight deadlines, they sometimes work in teams, each person translating a different part of the same text. This requires ensuring consistency of terminology through all revisions.

Translators may use a variety of reference materials, including:

- dictionaries and lexicons
- glossaries
- computerized terminology banks and encyclopaedias
- general correspondence and reports
- miscellaneous documents such as parallel texts
- technical specifications
- manuals and educational textbooks.

In alphabetical order, the most commonly translated languages in Canada are:

- Chinese
- English
- French
- German
- Japanese
- Russian
- Spanish.

Working Conditions

Particularly when there are rush jobs, translators may work long hours to meet deadlines.

Personal Characteristics

Translators need the following characteristics:

- inquisitiveness and an interest in researching information in new areas
- the ability to pay close attention to details for extended periods of time
- a willingness to work long hours when required to meet deadlines.

They should enjoy transcribing and analyzing text, and determining the most appropriate adaptation from one language to another.

Educational Requirements

(section revised JULY 2005)

Translators need the following knowledge and skills:

- mastery of both source and target languages
- excellent linguistic capabilities
- knowledge of current affairs
- an understanding of the fundamentals of business, technology and law
- knowledge of word processing, desktop publishing and spreadsheet programs
- knowledge of the latest electronic resources for translators.

The recommended educational route for those interested in becoming translators is to obtain an undergraduate degree in one or more languages, followed by completion of a specialized program in translation. The best practical training for translators is to spend a considerable length of time living in the culture of the targeted language.

European standards for translators require at least two or more languages in addition to their mother tongue. Studying or living in Europe is excellent preparation for translating with international organizations.

In Alberta, many post-secondary institutions offer courses in various languages. The following institutions offer full programs in one or more languages or other programs related to interpretation:

- **Athabasca University** offers three and four year Bachelor of Arts (BA) degree programs in French by distance education. Applicants must be at least 16 years of age and live in North America.
- **Concordia University College of Alberta** in Edmonton offers a three year BA program in French. The entrance requirement is an average of at least 60 per cent in English 30 and four other appropriate 30 level subjects.
- The **University of Alberta** in Edmonton offers
    - Bachelor of Arts (BA) programs in Germanic Languages (German, Scandinavian, Norwegian), Latin, Romance Languages (French, Italian, Portuguese, Spanish), Slavic languages (Polish, Russian and Ukrainian), and East Asian Languages (Chinese and Japanese). The entrance requirement is an average of at least 65 per cent in English 30, a 30-level language other than English and three other appropriate 30-level subjects (Social Studies 30 recommended). Some of these programs are offered in Camrose.
    - a certificate in Translation Studies in French, German and Spanish (which can be obtained while completing BA requirements).
    - programs in French and French-Canadian through the Faculte St-Jean. All instruction is in French.
    - master's and doctoral (PhD) degree programs with a specialization in translation. The admission requirement is an acceptable average in a related four year bachelor degree (or equivalent) program.
- The **University of Calgary** offers four year and five year (co-op) BA degree programs in French, German, Russian and Spanish. The entrance requirement is a high school diploma or equivalent with an average of at least 70 per cent in English 30 and four of the following: Social Studies 30, Pure Math 30, Applied Math 30, Math 31, Biology 30, Chemistry 30, Physics 30, Science 30, a language 30 other than English and one five credit Grade 12 subject.
- The **University of Lethbridge** offers four year degree programs in French, German and Spanish. The entrance requirement is an average of at least 65 per cent in English 30 and three other appropriate 30 level subjects plus a fifth Grade 12 subject.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

In Canada, programs specifically in translation are offered by:

- **College Universitaire de St. Boniface** in Winnipeg
- **Laurentian University** in Sudbury
- the **University of Ottawa** in Ottawa.

Some translation courses are offered by distance education.

Other Requirements

Certification through the Association of Translators and Interpreters of Alberta (ATIA) is recommended because it shows clients that translators have met national standards and are bound by a code of ethics. Candidates for ATIA membership must pass an exam administered by the Canadian Translators, Terminologists and Interpreters Council (CTTIC). Exams are held yearly in Edmonton and Calgary. Junior translators can become associate members of the ATIA.

Employment and Advancement

(section revised JANUARY 2006)

Translators may be employed by or provide freelance services to:

- private translation firms and corporations
- educational institutions
- federal and provincial governments.

They may be employed full-time or part-time, or work on a fee-for-service basis.

Freelance translators may work on a variety of documents including:

- international trade publications
- news articles
- books
- industry manuals
- legal documents
- technical or scientific reports or articles
- radio and television scripts
- information related to entertainment, banking or medicine.

Translators also may work as terminologists or revisers. Some freelance translators work for clients in other parts of the world via electronic communications. Advancement generally takes the form of building a more extensive client base.

Translators are part of the larger National Occupational Classification 5125: Translators, Terminologists and Interpreters. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Educational Services**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- the translator's combination of languages
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 700 Albertans are employed in the Translators, Terminologists and Interpreters occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since translators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for translators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Freelance translators work on a contract basis on specific projects and may be paid by the word. Annual incomes therefore vary from one translator to another, and may vary from one year to another.

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Translators, Terminologists and Interpreters occupational group ranged from **$17,100 to $33,700 a year.** After three years, salaries ranged from **$35,800 to $41,900**. The average salary was **$35,600 a year.**

Transport Refrigeration Technician

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Transport refrigeration technicians install, repair and maintain equipment that supplies and contains conditioned air in mobile units which transport perishable goods such as food and medical supplies.

NOC Number(s): 7313
Minimum Education: Apprenticeship Trade
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M I

Duties

Duties vary from one position to another but, in general, transport refrigeration technicians:

- assemble and install refrigeration components such as motors, compressors and gauges
- measure and cut piping, and connect piping
- read wiring diagrams, and install and calibrate related controls
- test lines to detect leaks
- recharge systems with refrigerant and perform routine maintenance checks
- service and repair two-, three- and four-cylinder diesel engines and related parts
- repair and replace parts and components, and overhaul entire refrigeration systems.

Working Conditions

Transport refrigeration technicians sometimes work in cold, cramped conditions. They usually work a 40-hour week but overtime may be required for emergency repairs. There may be some risk of injury when working with electricity, gases under high pressure and hazardous gases.

Transport refrigeration technicians may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Transport refrigeration technicians need the following characteristics:

- mechanical ability
- good co-ordination and manual dexterity
- the ability to work well with co-workers
- good customer service skills
- the ability to keep up to date with changing technology.

They should enjoy problem-solving and working with little supervision.

Educational Requirements

To work in Alberta, transport refrigeration technicians must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta high school transcript with Math 20 or 23, Applied Math 20 or Pure Math 20, and English 20 or 23 and Science 20, Biology 20, Physics 20, or Chemistry 20 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is three periods (three 14-month periods) that include a minimum of 1,800 hours of on-the-job training and eight weeks of technical training each period. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at the Southern Alberta Institute of Technology (SAIT) in Calgary.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Transport refrigeration technicians are employed by large transport companies, organizations such as food wholesalers that operate their own fleet of transport vehicles, and firms specializing in transport refrigeration maintenance and repair work.

Experienced transport refrigeration technicians may advance to supervisory positions. Alberta certified journeyman transport refrigeration technicians who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Transport refrigeration mechanics are part of the larger National Occupational Classification 7313: Refrigeration and Air Conditioning Mechanics. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Construction**
- **Metals, Metal Fabrication and Machinery Manufacturing**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,250 Albertans are employed in the Refrigeration and Air Conditioning Mechanics occupational group which is expected to grow 1.4 to 2.4 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since transport refrigeration mechanics form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for transport refrigeration mechanics.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice transport refrigeration technicians earn at least 60 per cent of the journeyman wage rate in their place of employment in the first period, 75 per cent in the second and 90 per cent in the third. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$18 to $26 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Refrigeration and Air Conditioning Mechanics occupational group working part-time or full-time earned from **$19,300 to $82,400 a year.** The average salary was **$55,700 a year.**

Travel Consultant

Produced FEBRUARY 2005

Travel consultants represent travel suppliers. They advertise, promote and sell a wide variety of travel services to the public.

NOC Number(s): 6431
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **S M I**

Duties

In general, travel consultants:

- describe and sell travel destinations, products and services to clients
- access information about costs, routes and schedules from a variety of print references and computer databases
- make reservations using telephone, fax, mail, computerized systems and the Internet
- issue required documentation such as tickets, travel insurance policies and itineraries
- notify customers about changes in travel plans and required documentation
- calculate and prepare invoices and accept payment from customers.

When routes or schedules change or other factors create the need to alter customer travel plans, travel consultants must be able to quickly make the necessary adjustments.

Travel agencies may earn commissions by selling the services of suppliers such as:

- transportation companies (e.g. airlines, motor coach companies, railway passenger services, cruise lines and car rental companies)
- accommodation facilities (e.g. hotels and resorts)
- cruiselines
- travel wholesale and tour companies offering package holidays
- other travel services (e.g. travel insurance).

Working Conditions

Travel consultants work in travel agencies located in towns or cities. Most of their time is spent behind a desk consulting with clients or completing paperwork. They are often subject to time pressures and must work overtime during peak travel periods or when travel plans change.

Personal Characteristics

Travel consultants are sales representatives who are responsible for encouraging customers to return and use the services of their agency again. Therefore, they must be able to:

- deal with all types of people patiently and pleasantly
- serve customers quickly and efficiently
- handle stressful situations calmly and effectively.

They should enjoy working with people and promoting travel products, performing detailed work and taking a methodical approach to compiling information and operating computerized systems.

Educational Requirements

(section revised DECEMBER 2005)

Travel consultants need:

- well-developed sales abilities
- mathematical skills
- a good memory
- typing and computer skills
- excellent organizational abilities
- knowledge of worldwide geography.

Travel consultants should have at least a high school diploma. Travel agencies generally prefer to hire people who have post-secondary education in travel-related courses or programs. The following are definite assets when prospective travel consultants are looking for employment:

- sales experience
- travel experience
- fluency in a second language
- office experience.

Travel-related post-secondary programs are offered throughout the province:

- The **CDI College of Business, Technology and Healthcare,** a private vocational school in Calgary and Edmonton, offers a 29 week Travel and Tourism program. The entrance requirement is a high school diploma with English 30 or 33, or equivalent.
- **Grant MacEwan College** in Edmonton offers a one year (accelerated) Travel diploma program. The entrance requirements are a high school diploma with at least 65 per cent in English 30 (or at least 75 per cent in English 33) and at least 65 per cent in Pure Math 20 or Applied Math 30 (or equivalent), good communication skills and knowledge of geography.
- **Medicine Hat College** offers a one year Travel and Tourism certificate program by distance and non-distance education. The entrance requirement for the certificate program is a high school diploma with English 30 or 33 and Math 13, or equivalent.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a Travel and Tourism diploma program by distance and non-distance education. The entrance requirement is a high school diploma or equivalent with English Language Arts 30-1 or 30-2 (or English 30 or 33).
- **Training Inc.**, a private vocational school in Lethbridge, offers a 26 week Tourism and Travel Sales program. The entrance requirement is a high school diploma with Grade 12 English and Math 10 (or any Grade 11 math) or equivalent.

For current information on specific programs and mature student admission, please check post-secondary calendars or websites.

Continuing education programs are often offered on an as needed basis.

Prospective students are strongly advised to discuss their career and education plans with people employed in the travel industry befor enrolling in an education program.

Other Requirements

Canadian Institute of Travel Counsellors (CITC) certification is voluntary. Applicants for travel counsellor certification should:

- take an endorsed training program
- pass two examinations
- complete ongoing education through industry-based training programs
- provide proof of current full-time employment with a recognized travel agency or travel service supplier
- obtain membership with their professional association.

To sell travel insurance, travel consultants must complete insurance company training.

Employment and Advancement

(section revised JANUARY 2006)

Travel consultants are employed by:

- retail travel agencies
- wholesale tour companies
- transportation and tourism companies
- travel insurance companies
- hotel chains
- government tourist boards.

The qualifications required for employment vary considerably from one employer to another. Inexperienced workers may start in clerical positions, and take night courses or in-service training while they are gaining experience. Although travel industry certification is not compulsory, some employers prefer to hire people who are certified.

Advancement depends on the travel consultant's sales ability and initiative, and the size of the company. Some experienced travel consultants open their own travel agencies.

In Alberta, over 75 per cent of people employed as travel consultants work in the **Management, Administrative and Other Support Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Management, Administrative and Other Support Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,650 Albertans are employed in the Travel Consellors occupational group which is expected to grow up to 0.9 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries, working conditions and travel benefits vary greatly from one employer to another. Many travel agencies are on incentive plans where wages are based on sales productivity.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Sales Travel Counsellors occupational group working part-time or full-time earned from **$18,300 to $74,100 a year.** The average salary was **$32,800 a year.**

Depending on their agency's sales performance, travel consultants may qualify for reduced rates for air, cruise and hotel arrangements. Consultant educational tours are offered to travel agencies by suppliers, and consultants usually attend one tour per year.

© Government of Alberta, Human Resources and Employment

Travel Guide

Produced MAY 2003

Travel guides escort individuals or groups of people on holiday tours.

NOC Number(s): 6441.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S M d**

Duties

Duties and responsibilities vary but, in general, travel guides:

- point out places of interest on a tour
- verify and confirm previously made transportation, meal and accommodation arrangements and resolve any problems that may arise
- look after the special needs of people on the tour
- answer questions
- evaluate services received on the tour and report to tour organizers.

Travel guides who operate on a freelance basis (are not employees of wholesale tour operations) may also:

- organize and promote tours
- pay bills and record cheques issued
- sell travel packages
- facilitate reservations from clients.

Some travel guides also operate transportation vehicles (e.g. buses, boats or limousines).

For information about local tour guides or mountaineering, hunting and fishing guides, see the Tour Guide and Outdoor Sport/Recreation Guide occupational profiles.

Working Conditions

Travel guides are often on their feet for most of the day, pointing out spots of interest and answering questions. While on tour, they work long hours, including evenings and weekends and are on call 24 hours a day. The work is sometimes seasonal.

Most travel guides regularly lift suitcases weighing up to 25 kg.

Personal Characteristics

Travel guides need the following characteristics:

- maturity
- good problem solving skills and the ability to respond to unexpected situations calmly, quickly and effectively (first aid training is recommended)
- the ability to create a friendly, enthusiastic atmosphere
- the ability to communicate effectively with large groups and also be responsive to individual needs
- knowledge of the facilities and services at major stops on the tour as well as geography and history relevant to the tour
- a good memory for details
- lots of patience and a genuine interest in all kinds of people.

They should enjoy meeting and talking to people, travelling and taking care of travel arrangements and resolving problems. They should have no personal commitments that would interfere with frequent travel.

Educational Requirements

There are no standard minimum education requirements for travel guides but most employers prefer to hire applicants who have post-secondary education or years of related experience.

Travel guides need some knowledge of the travel industry (e.g. air travel routines, Customs regulations) and the cultures of the regions they visit, and should be at least 21 years of age so they can accompany groups on night club tours. Experience working with the public and a second language are definite assets.

Travel guides **may be trained on the job or have related post-secondary education.** For information about related post-secondary programs, see the Travel Consultant occupational profile.

Other Requirements

Travel guides who operate vehicles must have **appropriate licenses** and may be tested again as part of the job interviewing process.

Employment and Advancement

(section revised JANUARY 2006)

Some travel guides are employed by tour/travel companies on a temporary basis, usually from March to October and December to March. Those employed on a full-time basis may assist in a travel office when not on tour. Some travel guides are self-employed and some volunteer their services in return for free trips.

Guides may advance to supervisory positions after several years of experience but advancement opportunities are generally limited.

Travel guides are part of the larger National Occupational Classification 6441: Tour and Travel Guides. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 350 Albertans are employed in the Tour and Travel Guides occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since travel guides form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for travel guides.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Pay rates for those employed on a temporary basis range from **$100 to $200 per day plus accommodation, meal and travel expenses (2003 estimates).** Tips from satisfied tour members may add considerably to tour guides' incomes.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Tour and Travel Guides occupational group working part-time or full-time earned from **$14,300 to $47,100 a year.** The average salary was **$27,800 a year.**

© Government of Alberta, Human Resources and Employment

Truck Driver

Produced OCTOBER 2003

Truck drivers operate gasoline or diesel-powered trucks, tractor-trailers and similar vehicles to transport goods and materials over local routes or long distances.

NOC Number(s): 7411.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O d**

Duties

Duties and responsibilities vary from one position to another but, in general, truck drivers:

- operate trucks and sometimes maneuver them in tight spaces
- routinely inspect brakes, tires, lights, horns, and cooling and refrigeration equipment before leaving the warehouse or terminal
- load trucks to maximize the use of space and distribute weight accordingly, and to ensure safety on the road
- secure cargo on the truck and place protective padding around articles to prevent damage during transit
- conduct security checks and inspections en route
- make emergency roadside adjustments and repairs
- follow local and interprovincial highway safety regulations
- have the weight of the entire unit checked as directed by weighing officials at highway scales
- keep records of loads delivered and picked up, arrival and departure times, and maintain vehicle log books (fuel consumption, mileage).

Some truck drivers specialize in operating special types of vehicles such as:

- heavy trucks for overweight loads
- tank trucks which transport bulk liquids
- gravel trucks
- tractor-trailers (two or more vehicles hooked together)
- industrial trucks (involving special equipment)
- garbage trucks (for more information, see the Refuse Truck Driver occupational profile)
- log and muskeg trucks
- extended length vehicles.

Many truck drivers are owner-operators who own their own vehicles and lease their services and trucks to other companies.

Working Conditions

Truck drivers often work long hours, primarily behind the wheel. They drive in all kinds of weather, traffic and road conditions.

Truck drivers' work loads and schedules vary depending on the goods being transported and the distances travelled. Some **local truck drivers** start out in the morning with a loaded truck and make deliveries all day, returning with an empty truck to the warehouse or plant at the end of the day. With other products such as lumber, local drivers may return to the yard to reload after each delivery.

Long distance truck drivers move goods between cities and across the continent. They often work long hours and travel at night. On relatively short runs, drivers may transport loaded trailers to nearby cities, pick up different loads for the return trip, and return to their starting points in the same day. On longer runs, drivers may be away for a week or longer. Sitting for long periods of time can be hard on the back.

Depending on the products being transported, truck drivers may or may not be responsible for loading and unloading the truck. If the driver is expected to unload, there may be a helper to assist with the job. Loading and unloading may require lifting over 25 kilograms.

Personal Characteristics

Truck drivers need the following characteristics:

- good health and vision
- the ability to learn how to use the on-board computer devices commonly used in the transportation industry
- the ability to remain alert and maintain a high level of concentration
- good interpersonal skills and a customer service orientation
- good judgement and the ability to react quickly in emergency situations
- the mechanical ability required to make minor repairs.

They should enjoy taking a methodical approach to recording information and obtaining required documentation, driving and talking to others involved in loading and receiving shipments.

Educational Requirements

Truck drivers must have **air brakes certification** and should have at least Grade 10 English reading and writing skills. Employers may require drivers to have first aid and CPR certification, WHMIS (Workplace Hazardous Materials Information System) training, TDG (Transportation of Dangerous Goods) training or H2S Alive training.

Drivers who haul to the United States must be at least 21 years of age and able to pass U.S. drug testing requirements. Employers generally prefer to hire drivers who do not have a criminal record, have no more than six demerits and are insurable at a reasonable cost (25 years of age or older).

Truck drivers must be able to maneuver trucks th ough narrow streets and alleys, into tight parking spaces, and up to loading docks. In Alberta, a system of **Classified Driver Licensing** sets strict requirements for handling specific types of trucks and combination vehicles, in addition to rigid medical standards. Trucking companies can only hire drivers who have qualified under this system.

Many people get started in the trucking industry by taking training courses offered by public colleges or private truck driving schools. Program length, content, costs and admission requirements vary. Before enrolling in a program, prospective students should visit several schools and compare their facilities for classroom instruction, the vehicles used for instruction and the qualifications of the instructors. Another good way to evaluate a school is to talk to former students and ask local trucking companies if they hire graduates from that school.

Applicants for a Class 1 license must be at least 18 years of age and have a valid Alberta class 5 driver's licence. Truck driving schools may require students to also have a clear driving record or minimum number of demerits or a medical examination.

Employment and Advancement

(section revised JANUARY 2006)

Truck drivers may work as employees or self-employed contractors for:

- transportation companies
- manufacturing and distribution companies
- retail outlets
- moving companies.

Some trucker drivers start work in entry-level jobs such as yard worker, dock handler, checker or clerk and advance to driving positions after they acquire the required operator's license and a driving position becomes available.

Many local drivers and a few long distance drivers have regularly assigned runs. Drivers who work for smaller companies are more likely to be assigned regular runs early in their employment. In large companies, drivers usually start on the "extra board" where they bid for runs on the basis of seniority.

Once they have gained some truck driving experience, drivers may be assigned to long haul or highway driving. As long as their driving records remain acceptable and they maintain good health, they can continue driving as long as they wish. They may also move into related areas such as operations (freight handling, dock supervision, dispatching) or communications (tracking the movement of shipments and trucks). Drivers who have business knowledge and skills may choose to purchase their own trucks or fleet of trucks.

In Alberta, over 75 per cent of people employed as truck drivers work in the following industries:

- **Transportation and Warehousing**
- **Construction**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 40,050 Albertans are employed in the Truck Drivers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that over 600 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Wages in the trucking industry vary, depending on the type of work, load and vehicle.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Truck Drivers occupational group working part-time or full-time earned from **$15,200 to $109,100 a year.** The average salary was **$49,200 a year.**

© Government of Alberta, Human Resources and Employment

Turfgrass Management Specialist

Produced MARCH 2005

Turfgrass management specialists maintain and manage grass and related areas and facilities, and assist in the design and construction of landscape projects.

NOC Number(s): 2225.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M D**

Duties

In general, turfgrass management specialists:

- plan, organize and direct the establishment and maintenance of turfgrass areas and associated plant materials and irrigation systems
- schedule maintenance activities to accommodate customer activities and events
- follow integrated pest management practices to identify and control problems created by insects, rodents, pest bird species, plant diseases and weeds
- determine the type and quantity of grass varieties to grow
- maintain good public relations with users of the facility
- hire, train and supervise staff and maintain personnel records
- prepare and manage budgets, and ensure the cost effectiveness of maintenance activities
- order plant material, supplies and equipment to ensure adequate inventory
- oversee the maintenance, servicing and replacement of turfgrass or grounds machinery
- schedule, maintain and repair irrigation systems
- keep records
- assist in the planning and development of golf courses, parks, lawn bowls, athletic fields and related lands.

Turfgrass management specialists may supervise crews of employees who perform the following duties or perform some tasks themselves:

- spread top soil, lay sod, seed and mulch grass
- plant shrubs, trees or annual flowers
- amend soil and install drainage systems if required
- mow, aerate, rake, edge, topdress, fertilize and irrigate turf
- gather litter and remove garbage
- apply pesticides to turf to control insects, weeds, rodents, pest birds and disease
- maintain pathways, ponds and irrigation systems (including winterizing them and starting them up in spring).

Turfgrass management specialists also may:

- own and operate turfgrass/landscape contracting and maintenance businesses
- work as consultants or sales representatives in the turfgrass industry
- manage commercial sod production businesses.

Working Conditions

Turfgrass management specialists work indoors and outdoors year-round. They often work long, irregular hours during the warmer months.

The work can be strenuous including lifting items weighing up to 25 kilograms. Turfgrass management specialists must observe safety precautions to reduce the health risks associated with handling fertilizers and pesticides.

Personal Characteristics

Turfgrass management specialists need the following characteristics:

- the ability to adapt to new situations and solve problems
- good communication skills in person and in writing
- the ability to work as part of a team
- mechanical aptitude
- a willingness to work with their hands.

They should enjoy supervising the work of others, working with people and operating equipment.

Educational Requirements

(section revised FEBRUARY 2006)

In Alberta, the following institutions offer post-secondary education programs that are directly related to turfgrass management:

- **Medicine Hat College** offers a one year Horticultural Technician certificate program with a specialization in turfgrass management in collaboration with Olds College. The entrance requirement is at least 55 per cent in Grade 12 English and Grade 11 math, biology and chemistry.
- The **Northern Alberta Institute of Technology** in Fairview offers a two year Golf Course Turfgrass Management Technology diploma program that has a 16 week work experience component between the first and second year. The entrance requirement is a high school diploma with Grade 11 English, science and math. NAIT also offers one year Turfgrass Equipment Technician, Horticulture Technician, Irrigation Technician, Precision Applicator Technician, and Sportsfields/Parks Technician certificate programs in Fairview.
- **Olds College** offers a two year Turf Grass Management diploma program. The entrance requirement is a high school diploma with at least 55 per cent in English Language Arts 30-1 or 30-2, and Grade 11 math, biology and chemistry. Olds College also offers a Bachelor of Applied Science degree program with a specialization in golf course management. The entrance requirement is a two year diploma from Olds College or equivalent.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Depending on the type of operation they work for and the type of pesticides they use, turfgrass management specialists may be required to hold a Landscape Alberta Pesticide Applicator Certificate from Lakeland College.

Employment and Advancement

(section revised JANUARY 2006)

Turfgrass management specialists are employed by:

- federal, provincial, regional and municipal government departments and private organizations that manage recreational facilities such as golf courses and athletic fields
- organizations with large real estate holdings such as condominium complexes, school districts, post-secondary institutions, industrial parks, airports and cemeteries
- turfgrass machinery, chemical and seed companies
- landscape contracting firms
- sod farms.

Some positions are seasonal.

In the past, many turfgrass management specialists worked their way up from labouring positions to supervisory positions. Now, graduates of related post-secondary education programs have a better chance of advancement than those who do not have related academic training.

Experienced turfgrass management specialists may advance to supervisory positions such as golf course superintendent or start their own landscape contracting firms. Advancement may require relocating to successively larger communities.

Turfgrass management specialists are part of the larger National Occupational Classification 2225: Landscape and Horticultural Technicians and Specialists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Professional and Technical Services**
- **Agriculture**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

About 1,050 Albertans are employed in the Landscape and Horticultural Technicians and Specialists occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since turfgrass management specialists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for turfgrass management specialists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for turfgrass management specialists vary considerably depending on their education, experience, location and responsibilities.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Landscape and Horticultural Technicians and Specialists occupational group working part-time or full-time earned from **$14,600 to $83,100 a year.** The average salary was **$39,900 a year.**

Underground Miner

Produced AUGUST 2005

Underground miners use different types and sizes of equipment to extract minerals from beneath the earth's surface and construct mine tunnels, passageways and shafts.

NOC Number(s): 8231
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O I M**

Duties

In general, underground miners:

- use specialized equipment to drill and blast rock, and remove waste rock during mine development
- use trucks, conveyor belts, hoists and other equipment to move rock to the surface
- develop mines by installing ground support, mine services (air and water), ventilation and equipment such as conveyor belts.

The mining methods and equipment used to recover minerals vary with the type and location of the ore. Underground miners may operate:

- trackless, self-propelled, rubber-tired or track-mounted drilling or mucking machines
- continuous mining machines
- tunnel-boring machines
- raise climbers
- cutting equipment
- loading machines
- shearers or plows
- conveyor equipment
- haulage trucks
- load-haul-dump vehicles such as scooptrams
- de-watering equipment such as pumps
- line-of-site remote control mining equipment
- tele-remote mining equipment.

There are basically four types of underground miners:

- drift miners work in lateral tunnels called drifts
- raise miners develop veritcal tunnels called raises
- stope miners extract ore
- shaft miners create the initial access downward in a shaft access mine.

Working Conditions

Underground miners usually work eight or 12 hour shifts including evenings, weekends and holidays. Overtime may be required to meet production deadlines.

Technological advances in all areas of mining have significantly improved working conditions but safety precautions are still required when using machinery and equipment. Other occupational hazards include flying particles, blast and exhaust fumes, dust, falling rock, water in-rushes, explosive methane gas (primarily in coal mining) and potential rock bursts. All underground miners must wear protective equipment such as steel-toed boots, gloves, hard hats, dust masks, glasses and hearing protection. They may be routinely required to lift items weighing up to 25 kilograms.

Personal Characteristics

Underground miners need the following characteristics:

- good hand-eye co-ordination to effectively and safely operate equipment
- good hearing and eyesight
- reasonable strength, agility and endurance
- the spatial perception required to judge distances
- a concern for safety
- no fear of closed, small or narrow spaces.

They should enjoy operating equipment, and having clear rules and organized methods for their work.

Educational Requirements

There are no standard education requirements for underground miners. Employers generally prefer to hire applicants who have a high school diploma or related experience (e.g. operating or maintaining heavy equipment). Anyone working underground must be 18 years of age or older.

Employers provide on the job training including an orientation to mine operations, safety and health. The training period varies in length but generally takes one to three years.

Employment and Advancement

(section revised JANUARY 2006)

Most of the underground miners employed in Alberta work in coal mines. They usually start as helpers. With experience and on the job training, they may advance to working with larger, more complicated equipment and possibly to supervisory positions. General mining experience is considered essential to advance to higher positions.

In some jurisdictions, underground miners must pass an annual medical examination.

Underground miners are part of the National Occupational Classification 8231: Underground Production and Development Miners. In Alberta, over 75 per cent of people employed in this classification work in the **Mining** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Mining industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,400 Albertans are employed in the Underground Production and Development Miners occupational group which is expected to grow up to 0.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

In 2003, Albertans working in the Underground Production and Development Miners occupational group earned an average salary of **$50,700 a year** (2003 Alberta Wage and Salary Survey).

Unit Clerk

Produced OCTOBER 2005

Unit clerks perform a variety of reception, clerical and administrative tasks at nursing stations on the units or wards of hospitals, continuing care centres and other medical facilities.

NOC Number(s): 1243
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **S O d**

Duties

Unit clerks are responsible for maintaining an orderly nursing station and assisting nursing staff by:

- assembling standard forms for patient charts
- routinely checking patient discharge documents for omissions and signatures and distributing admission and discharge forms and charts to the appropriate departments
- processing physicians' instructions by recording information on requisition forms, consent forms, chart forms and computerized systems
- co-ordinating and scheduling patient tests and treatments with internal departments and external centres, arranging for patient transportation and contacting patients to advise them of admission, discharge and appointment dates
- greeting, screening and directing visitors, and distributing flowers, mail and packages
- answering the telephone, relaying messages and transferring calls
- performing other clerical functions such as preparing staff time sheets, updating patient census and room lists, filing documents and cards, and requisitioning office and patient care supplies
- preparing and submitting health care billings for procedures, treatments and services on behalf of physicians.

Working Conditions

Unit clerks generally work day and evening shifts in hospitals and other health care facilities but may be required to work weekends and nights on some wards. Hours are being extended with changes in health care delivery and staff utilization patterns.

Ongoing exposure to the emotional stress that illness or injury causes patients and their families can be stressful for unit clerks. They work in very busy environments, constantly interacting with other people.

Unit clerks are routinely required to lift items weighing up to 10 kilograms.

Personal Characteristics

Unit clerks need the following characteristics:

- good organizational skills
- good communication skills
- the ability to work efficiently despite frequent interruptions
- emotional maturity and the ability to handle stress
- the ability to maintain patient confidentiality
- good interpersonal skills especially the ability to deal effectively with difficult behaviours sometimes exhibited by people in distress.

They should enjoy working with people, operating computer and related equipment, and compiling information.

Educational Requirements

(section revised NOVEMBER 2005)

Employers generally prefer to hire graduates of recognized unit clerk training programs that include a course in medical terminology and a practicum (work experience) component. Applicants who have equivalent qualifications may be considered.

In Alberta, the following post-secondary institutions offer unit clerk training programs:

- **Academy of Learning**, a private vocational school in Airdrie, Calgary, Edmonton, High River and Red Deer, offers a 51 week Medical Office Assistant program with a Unit Clerk Specialty. The entrance requirement is a high school diploma or equivalent.
- **Bow Valley College** in Calgary offers a 21 week Hospital Unit Clerk certificate program that includes a four week practicum. The entrance requirement is at least three Grade 11 subjects including English 20 or 23, or a GED, and a typing speed of at least 20 words per minute. Standardized testing is required. Graduates of this program may apply for advanced credit toward the college's Medical Office Assistant, Dental Receptionist or Hospital Admitting Clerk programs.
- **HCC Choice College**, a private vocational school in Spruce Grove, offers a 25 week Medical Clinical Assistant program with a unit clerk specialization. The entrance requirement is a high school diploma with Grade 12 English and Math 10 or any Grade 11 math, or equivalent.
- **Lethbridge Community College** offers a 19 week Unit Clerk program that includes a three week practicum. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English Language Arts 30-1 or 65 per cent in ELA 30-2, and a typing speed of at least 30 words per minute.
- **NorQuest College** in Edmonton offers 21 week Hospital Unit Clerk program that includes a four week practicum. The entrance requirement is 60 per cent in English Language Arts 30-1 or 65 per cent in ELA 30-2, and a new keyboarding speed of 20 words per minute.
- **Prestwick College**, a private vocational school in Calgary offers a 32 week Unit Clerk program. The entrance requirement is a high school diploma with Grade 12 English and math, or equivalent.
- **Red Deer College** offers a 22 week Unit Clerk program. The entrance requirement is three Grade 11 subjects including English 20 or 23 or equivalent, and a typing speed of at least 20 words per minute. A medical history plus immunization is also required.

Students may be required to submit medical histories, immunization records or criminal record checks prior to practicum placement.

Other post-secondary institutions that offer medical or clerical daytime programs may offer related evening courses. For information about medical office assistant programs, see the Medical Secretary occupational profile. Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Unit clerks are employed in hospitals, continuing care facilities and rehabilitation institutions. Full-time job openings for unit clerks are sometimes filled by other hospital employees such as part-time unit clerks or licensed practical nurses.

Applicants for employment are required to undergo a police security clearance.

In large organizations, experienced unit clerks may advance to clerical co-ordinator positions or move into other clerical and administrative support occupations.

Unit clerks are part of the larger National Occupational Classification 1243: Medical Secretaries. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,100 Albertans are employed in the Medical Secretaries occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 60 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since unit/ward clerks form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for unit/ward clerks.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Medical Secretaries occupational group working part-time or full-time earned from **$12,400 to $51,800 a year.** The average salary was **$25,100 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

© Government of Alberta, Human Resources and Employment

University Professor

Produced NOVEMBER 2005

University professors are employed by degree-granting institutions to teach and produce works of art or conduct research and *publish their research findings*.

NOC Number(s): 4121
Minimum Education: 8 + years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I D S**

Duties

University professors are scholars recognized in the academic community for their research and teaching, and professional publications or works of art. Their duties vary but, in general, they:

- conduct research studies and publish their findings and theoretical/professional perspectives, or create or perform works of art
- plan and teach university courses
- prepare, administer and mark student assignments and examinations
- advise students regarding course and academic matters
- supervise graduate students
- represent their universities as speakers, guest lecturers, consultants and resource personnel
- participate in university governance.

Professors also may have other duties such as:

- analyzing and evaluating subject information to determine course requirements
- organizing and co-ordinating curriculum and course schedules
- advising students regarding academic requirements and options
- serving on committees concerned with curriculum revision, academic planning, degree requirements and faculty matters.

Working Conditions

Professors working with undergraduate students may have classes of over 200 students. In these very large classes, there may be very little personal interaction between the students and the professor. However, professors also may teach senior undergraduate and graduate level courses that rarely exceed 20 students in size and are usually seminars or tutorials.

Most professors work long hours, year round. When classes are in session, classroom teaching takes approximately 9 to 12 hours a week, preparation for teaching takes up to three hours for every hour of instruction time, and grading and evaluating course assignments takes approximately 9 to 12 hours a week. Professors are expected to use the periods in which they are not teaching, generally the spring or summer months, to pursue research activities. Many universities occasionally grant professors study leaves (sabbaticals) to assist in their studies and research.

Personal Characteristics

University professors need the following characteristics:

- a desire to learn and share their knowledge with others
- critical thinking skills
- an aptitude for art or research in a particular discipline
- excellent oral and written communication skills including the ability to present complex, in-depth materials at a student level.

They should enjoy co-ordinating information in innovative ways to prepare teaching materials, supervising and evaluating student progress, and helping others.

Educational Requirements

Almost all university professors have doctoral degrees and are highly regarded for their depth of knowledge and expertise in their fields. They usually hold two or more post-graduate degrees, often obtained with distinction, and have made outstanding and innovative contributions in their fields of study.

Students hoping to become university professors should have records of academic excellence throughout high school, undergraduate and graduate degree programs (often honours programs). The status of a post-graduate degree is often related to the academic prestige and reputation of the university at which it was conferred. This factor may directly affect the success of a graduate competing for a teaching position.

Employment and Advancement*

(section revised JANUARY 2006)

Becoming a professor at a university can be a long and difficult process. Doctoral program graduates often have to move several times from one university to another as term or sessional instructors until they obtain permanent employment and can begin to move up the academic ladder to a full professorship.

Assistant professors, associate professors and professors have similar duties but are differentiated by years of experience, achievement, prestige and level of responsibility. Although five or six years are usually spent at each of the lower levels (assistant and associate) moving towards full professorship, not all assistant professors or associate professors become full professors. Usually, after five years of full-time work, faculty members are considered for tenure (permanent) status which involves a rigorous review of the individual's accomplishments by academic peers.

With experience, university professors may:

- be appointed to sit on various committees or assume a chairmanship or department head position
- work as consultants for government, industry or private businesses
- move from teaching into such senior administrative academic positions as dean, vice-president or president within a university.

In Alberta, university professors work in the **Educational Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Educational Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 6,400 Albertans are employed in the University Professors occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 90 to 160 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for entry level university positions vary with:

- personal qualifications
- academic qualifications
- administrative responsibilities
- the faculty and university.

Full professors at prestigious universities may earn up to $140,000 a year (2005 estimate).

© Government of Alberta, Human Resources and Employment

Upholsterer

Produced DECEMBER 2003

Upholsterers cover furniture such as sofas and chairs with fabric, leather and other upholstery materials.

NOC Number(s): 7341
Minimum Education: Less than high school
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: O M I

Duties

Custom upholsterers usually work in small shops where they make new furniture from standard patterns. They make or, sometimes, rebuild an entire articie of furniture and may help customers choose fabrics and styles. Some highly skilled custom upholsters design and produce furniture according to customer specifications.

Production upholsterers work in factories and usually specialize in one area of new furniture production. They work on an assembly line performing one function and pass the furniture on to others to finish.

Re-upholsterers re-condition old furniture. In general, they:

- remove the old cover and padding
- examine the springing and, if required, replace it with webbing, coil springs or sinuous springs
- build the chair or sofa up with loose fibre stuffing, cotton, felt and/or foam padding
- shape and form the stuffing
- measure and cut fabric to fit each part of the furniture
- shape and mark fabric for sewing
- sew fabric and cushions
- fit the fabric to the furniture
- staple or sew the fabric in place.

Re-upholsterers also repair furniture by repairing split seams, replacing broken springs and replacing foam in seat cushions.

Custom upholsterers and re-upholsterers may also prepare cost estimates or refinish wood parts of upholstered furniture.

Working Conditions

Upholstery work requires considerable standing, bending and stooping, and may involve lifting pieces of furniture that weigh up to 25 kilograms.

Upholsters use a variety of hand tools, including measuring tapes, pneumatic staplers, hammers, scissors and pliers and must be careful to avoid injury. They work indoors in shops or factories that are usually well lighted and clean, although sometimes dusty.

Hours of work vary. Production upholsterers usually work shifts. Custom upholsterers and re-upholsterers who own their own shops may work long, irregular hours to meet customer demands.

Personal Characteristics

Upholsterers need the following characteristics:

- excellent manual dexterity and co-ordination
- good vision
- strength and endurance
- motivation
- problem solving skills.

A flair for colour and the creative use of fabrics is an asset.

Upholsterers should enjoy using tools and machinery to perform tasks requiring precision, having clear guidelines and methods for their work and dealing with customers.

Educational Requirements

(section revised SEPTEMBER 2005)

Most upholsterers are **trained on the job.** Mastering all of the skills necessary to work independently takes up to five years.

Production upholsterers begin on the simpler functions in an assembly line and progress to more complex tasks. Custom upholsterers start with routine tasks such as removing old fabric, padding or springs, and move on to more difficult tasks as they gain experience. This training period is reduced for graduates of furniture upholstering programs.

Kwantlen College in Surrey offers a nine month Furniture Upholstery program. The entrance requirements are Grade 10 reading comprehension and math skills as assessed by the College, satisfactory physical health and a good working knowledge of the upholstery trade.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Most production upholsterers are employed in furniture factories. Most custom upholsterers are self-employed or work as employees in small shops that employ fewer than five people. Some upholsterers work for furniture stores and businesses such as:

- hotel chains
- railways
- airlines
- automotive manufacturers.

Experienced upholsterers in large factories may advance to supervisory positions depending on their experience and management ability. Experienced custom upholsterers may open their own shops.

In Alberta, most people employed as upholsterers are work in the **Repair, Maintenance, Personal and Other Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Repair, Maintenance, Personal and Other Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,050 Albertans are employed in the Upholsterers occupational group which is expected to grow up to 0.9 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Inexperienced upholsterers may start at minimum wage. Experienced upholsterers may be paid on per hourly basis in custom shops or on a piecework basis in factories, depending on the employer and the kind of work.

The upholstery business is extremely competitive and the profits made by self-employed custom upholsterers depend largely on market conditions and their upholstery skills, business skills and reputation.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Upholsterers occupational group working part-time or full-time earned from **$16,000 to $42,000 a year.** The average salary was **$25,600 a year.**

Urban, Regional and Park Planners

Produced JUNE 2003

Urban, regional and park planners study the social, economic, political and physical conditions of urban and rural communities, and develop plans for the overall management and protection of specific land parcels or regions.

NOC Number(s): 2153
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I S D**

Duties

Urban and regional planners may focus on:

- housing
- subdivision design
- public facilities
- public consultation
- transportation and transit
- parks and recreation
- heritage preservation
- tourism
- downtown revitalization
- health care services and systems
- community and regional economic development
- municipal or regional planning
- current or long range planning.

In general, however, they:

- prepare statutory plans, community plans and land use bylaws
- prepare development guidelines
- facilitate public participation meetings and public forums
- conduct urban design studies
- confer with local authorities, civic leaders, architects, engineers, developers, land surveyors, land owners, social scientists, lawyers and other professionals
- assess social and economic conditions and trends
- control and guide community development and renewal
- set up and maintain database and information systems.

In general, there are three levels of planners:

- junior and entry-level planners are usually recent graduates from recognized schools who work at levels requiring considerable supervision.
- intermediate planners have more experience and responsibilities.
- senior, working-level planners have advanced university education or a number of years of practical experience in planning.

Senior planners may be involved in independent projects and required, from time to time, to supervise technical staff. In some cases, they may act as project managers.

Park planners specialize in the overall planning, design and establishment of parks and natural areas. In general, they:

- co-ordinate plans to preserve the natural features of parks and wilderness areas while allowing visitors to enjoy the outdoor experience
- undertake studies concerning the total recreational use of parks (type of facilities, research management, education and interpretation, and operation)

- prepare reports, plans and recommendations on matters such as priorities in development, zoning, interpretive programs and resource management
- formulate strategies and programs for application throughout the parks system (for more information, see the Landscape Architect occupational profile).

Working Conditions

Most planners work standard office hours in an office environment. However, they may work longer hours to meet project deadlines or attend meetings in the evening.

Personal Characteristics

Urban, regional and park planners need the following characteristics:

- the ability to consider a situation from many competing points of view
- analytical skills and decision-making skills
- the ability to work in a team environment
- good interpersonal and communication skills
- an interest in serving the public.

They should enjoy synthesizing information and developing innovative proposals, presenting plans and proposals to people, and supervising and co-ordinating the work of others.

Educational Requirements

(section revised SEPTEMBER 2004)

Planning requires knowledge in diverse fields, including urban design, economics, architecture, engineering, social sciences, ecology and geography, as well as physical environment design skills. For this reason, planners come from a wide variety of academic backgrounds. Many have a Bachelor of Arts (BA) or Bachelor of Science (B.Sc.) degree in planning or a related discipline such as engineering, architecture, geography, forestry or economics. For information about related bachelor degree programs, see the appropriate occupational profiles (e.g. Architect, Civil Engineer, Economist, Environmental Engineer, Forester, Geographer, Landscape Architect).

Several degree programs directly related to urban, regional and park planning are offered in Alberta:

- The **University of Alberta** in Edmonton offers a four year BA degree program in Recreation and Leisure Studies with a specialization in nature-based leisure and heritage resources. The entrance requirement is an average of at least 70 per cent in English 30 and four other approved Grade 12 subjects (Biology 30 and Social Studies 30 recommended). The Faculty of Extension offers a 13 course part-time Applied Land Use Planning certificate program designed for people who have experience in municipal planning and development.
- The **University of Calgary** offers four year BA degree programs in Urban Studies and Leisure, Tourism and Society. The entrance requirement for the Urban Studies program is an average of 70 per cent in English 30, Pure Math 30 or Math 31, and four other appropriate subjects (French 30, 30S, 30N, Francais 30 or French Language Arts recommended). The entrance requirement for the Leisure, Tourism and Society program is an average of 70 per cent in English 30; Pure or Applied Math 30 or Math 31; and three of the following: Biology 30, Chemistry 30, Physics 30, Social Studies 30, Science 30, a 30-level language other than English, one five-credit grade 12 subject. The University of Calgary also offers a master's degree program in Urban Planning that meets **Canadian Institute of Planners** accreditation requirements as well as a three year MEDes in Urban Design.
- The **University of Lethbridge** offers a four year BA degree program in Urban and Regional Studies, and five year combined degree programs. The entrance requirement is an average of at least 65 per cent in English 30 and three other appropriate 30-level subjects, plus a fifth Grade 12 subject. Biology 30, Chemistry 30, Math 30 or Pure Math 30, and Math 31 may be required for some of the courses in the program.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Alberta Community Planner is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself an Alberta Community Planner, you must be a registered member of the Alberta Association, Canadian Institute of Planners (AACIP). You do **not** have to be registered if you do not call yourself an Alberta Community Planner.

Employment and Advancement

(section revised JANUARY 2006)

Planners may work for:

- provincial government departments
- federal government departments and agencies
- municipal governments
- intermunicipal service agencies
- development companies and private consulting firms
- large corporations in resource industries
- organizations such as economic development authorities.

Experienced planners may advance to management positions such as planning director. Planning directors supervise other planners, advise and assist in developing policies, and serve on planning boards. They spend most of their time setting policy direction, performing administrative tasks such as writing reports, attending meetings and supervising planners and researchers.

Urban, regional and park planners are part of the larger National Occupational Classification 2153: Urban and Land Use Planners. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Oil and Gas Extraction**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,050 Albertans are employed in the Urban and Land Use Planners occupational group which is expected to grow 2.7 to 3.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Urban and Land Use Planners occupational group working part-time or full-time earned from **$28,900 to $89,700 a year.** The average salary was **$68,200 a year.**

Utility Clerk

Produced NOVEMBER 2005

Utility clerks record information, receive payments, process forms, answer enquiries and handle complaints from the public regarding utility company services and policies.

NOC Number(s): 1453.2
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S i**

Duties

In general, utility clerks:

- do the computer and paperwork involved in processing work orders, billing and customer payments
- deal with emergency calls (e.g. no heat in the winter, natural gas leaks)
- answer enquiries about rates, services, bill calculations and adjustments
- resolve customer complaints.

Specific duties depend on company size, location and the type of service provided. In gas, water and electricity companies, utility clerks may:

- take orders for domestic and commercial services in person or by telephone, letter or fax
- provide customer account analysis
- co-ordinate activities with meter readers, crews and sub-contractors
- dispatch orders for repair, installation and discontinuance of service
- implement optional payment plans (e.g. equal payments, pre-authorized electronic withdrawals)
- accept deposits
- review and correct irregular billings and process account adjustments
- explain company policies regarding deposit refunds, rates, payment schedules, credit and collection procedures
- establish customer credit and extend credit (within pre-set limits) and negotiate payment plans
- conduct delinquent bill investigations and disconnect accounts
- promote sales of company products and services.

In large offices, these duties may be separated into several different job descriptions. In some organizations, utility clerks work in call centres (for more information, see the Call Centre Agent occupational profile).

Working Conditions

Utility clerks may work regular office hours, rotating shifts or part-time shifts to cover peak call periods. Dealing with unhappy and difficult customers can be stressful.

Personal Characteristics

Utility clerks need the following characteristics:

- tact and patience for dealing with customers who have complaints
- the ability to remain calm in emergency situations
- good communication skills
- problem-solving and conflict-resolution skills
- an aptitude for working with numbers and detailed paperwork.

They should enjoy having established policies and guidelines for their work, speaking with customers and obtaining the information required to provide services.

Educational Requirements

The minimum education requirement for utility clerks is a high school diploma and good keyboarding skills. However, most employers prefer (and some employers require) job candidates to have at least one year of related post-secondary education (e.g. office procedures training, call centre operations training, accounting courses). Experience in a customer-oriented environment and experience with billing or accounting programs also may be required. The ability to speak a second language is a definite asset.

For information about related post-secondary education programs, see the Accounting Technician, Administrative Assistant and Call Centre Agent occupational profiles.

Employment and Advancement

Utility clerks are employed by utility companies and contractors who operate call centres for utility companies. Most utility company offices and call centres are located in larger centres. Job applicants may be required to successfully complete pre-employment tests and an interview.

Experienced utility clerks may advance to supervisory positions in larger urban offices.

Utility clerks are part of the larger National Occupational Classification 1453: Customer Service, Information and Related Clerks. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Information, Culture and Recreation**
- **Retail Trade**
- **Transportation and Warehousing**
- **Finance, Insurance and Real Estate**
- **Public Administration**
- **Utilities**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 15,600 Albertans are employed in the Customer Service, Information and Related Clerks occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 180 to 350 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since utility clerks form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for utility clerks.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Starting salaries vary according to the size and location of the company, and the responsibilities of the position.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Customer Service, Information and Related Clerks occupational group working part-time or full-time earned from **$11,400 to $93,800 a year.** The average salary was **$32,800 a year.**

Vending Machine Repairer

Produced JANUARY 2004

Vending machine repairers install, service and repair coin-operated vending machines that dispense food, beverages and other products.

NOC Number(s): 7445
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M I

Duties

Vending machines may dispense a wide variety of goods, ranging from food and tobacco products to coins and cash cards. The duties and responsibilities of vending machine repairers therefore vary depending on the types of machines they service. In general, however, vending machine repairers:

- test new machines prior to installing them
- transport and install machines by connecting them to sources of electricity and, where necessary, water
- make routine service calls to do preventative maintenance work such as cleaning electrical contact points, lubricating parts and making minor adjustments to improve machine operation
- educate route workers who stock machines about about machine operations to reduce the frequency of malfunctions
- respond to calls about machines needing repair from vending machine owners and concessionaires (organizations housing machines on a concession basis)
- use hand tools and electrical testing equipment to adjust machines and pressure gauges and thermometers to test heating and cooling systems
- replace worn parts and defective electronic components
- arrange to return machines requiring major repairs to the shop
- dismantle and repair or rebuild machines in the shop
- fill and clean machines when required
- may collect coins from machines or prepare invoices for concessionaires.

Working Conditions

Vending machine repairers usually work a standard 40 hour week but may be on call evenings and weekends. They work in repair shops and where machines are located (offices, industrial plants, institutions, retail operations such as hotels and restaurants). They often work in busy public places and cramped quarters. Travel from jobsite to jobsite is required.

Lifting items that may weigh up to or over 25 kilograms is required. Safety procedures and equipment are required to avoid injury when moving heavy machines and working with electricity or microwave equipment.

Personal Characteristics

Vending machine repairers need the following characteristics:

- mechanical ability and manual dexterity
- the ability to move large, heavy machines
- good eyesight and colour vision
- the ability to solve problems with little direction or supervision
- good communication and interpersonal skills for dealing with concessionaires and machine owners.

They should enjoy using tools, testing and adjusting equipment and trouble-shooting problems.

Educational Requirements

Vending machine repairers are **trained on the job**. Most begin as route workers who remove cash and keep the vending machines on a regular route stocked and clean. Job applicants must have a valid driver's license and be bondable (acceptable to bonding companies as responsible, law-abiding people).

Most employers prefer to hire applicants who have a **high school diploma**. Basic computer skills are required in companies that generate service orders by computer. Background education or experience in electronics is an asset but not required. Vending machine manufacturers often offer seminars to help repairers keep their knowledge and skills up to date.

Other Requirements

In Alberta, vending machine repairers who work on refrigeration systems must be certified journeymen (for more information, see the Refrigeration and Air Conditioning Mechanic occupational profile).

Employment and Advancement

(section revised JANUARY 2006)

Most vending machine repairers in Alberta are employed by vending machine operators (firms that own or lease vending machines) and soft drink companies. Route workers interested in moving into repair positions may work for the same company for years before an entry-level technical position becomes available.

Advancement opportunities to supervisory positions are limited. With additional training, experienced vending machine repairers may move into related occupations such as meter repairer or scale repairer.

Vending machine repairers are part of the larger National Occupational Classification 7445: Other Repairers and Servicers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Retail Trade**
- **Repair, Maintenance, Personal and Other Services**
- **Wholesale Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries lsited above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,100 Albertans are employed in the Other Repairers and Servicers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since vending machine repairers form only a part of the much larger occupational group on which this forecast is based, only a portion of the new positions created will be for vending machine repairers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Hourly wages for vending machine repairers range from **$8 to $16 per hour (2004 estimates)** depending on the size of the company and the skills and experience of the vending machine repairer. Most companies pay overtime for emergency repair work on weekends or holidays. Other benefits vary from employer to employer.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Repairers and Servicers occupational group working part-time or full-time earned from **$12,200 to $78,600 a year.** The average salary was **$36,100 a year.**

Vending Machine Route Worker

Produced MARCH 2005

Vending machine route workers fill, clean and maintain vending machines that dispense change or products in places such as offices, schools and hotels.

NOC Number(s): 7414
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O s**

Duties

Vending machine route workers usually visit machines in 10 to 20 locations per day. They may have a set route or plan their own routes.

Duties and responsibilities may vary from one company to another but, in general, vending machine route workers:

- load supplies in a vehicle such as a van or light truck
- drive to vending machine locations
- open and refill machines
- change product labels if necessary
- collect money and ensure machines are locked
- record the amount of money collected and stock required to refill machines, or download this information into handheld devices
- ensure that machines are clean and in good working order
- establish and maintain good customer relations with business owners and operators
- report damage to machines
- make minor repairs and report broken machines.

They also may deliver and install machines that do not require special electrical or plumbing connections.

Working Conditions

Vending machine route workers drive in all types of weather conditions but spend spend most of their time indoors servicing machines. They usually work shifts from early morning until mid-afternoon. They may work weekends and holidays or be on call. Overtime may be required during busy periods or when driving conditions are poor. In rural areas, long distance travel may be required.

Vending machines are usually exposed to pedestrian traffic and working conditions around them is often cramped. The work is physically demanding. Vending machine route workers routinely lift and carry supplies that may weigh up to 25 kg, and bend and stoop to load machines.

Personal Characteristics

Vending machine route workers need the following characteristics:

- honest and reliable
- physically fit
- able to work with little supervision
- well groomed (to present a positive image of their company)
- able to establish and maintain good customer relations
- aware of security and safety issues.

They should enjoy driving, keeping records and talking to people.

Educational Requirements

There are **no standard education requirements** for vending machine route workers. Employers generally require applicants to:

- have a valid driver's license and a good driving record
- be bondable (acceptable to bonding companies as responsible, law-abiding people)
- have at least Grade 10 education and math skills.

Employers may prefer to hire high school graduates who have computer skills, training in electronics or experience related to inventory management.

Vending machine route workers are trained on the job.

Employment and Advancement

(section revised JANUARY 2006)

Vending machine route workers are employed by vending machine companies and food and beverage manufacturers.

Experienced route workers may move into vending machine repair or supervisory positions. For more information, see the Vending Machine Repairer occupational profile.

Vending machine route workers are part of the larger National Occupational Classification 7414: Delivery and Courier Service Drivers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Transportation and Warehousing**
- **Retail Trade**
- **Accommodation and Food Services**
- **Wholesale Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 10,500 Albertans are employed in the Delivery and Courier Service Drivers occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 100 to 210 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since vending machine route workers form only a small part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for vending machine route workers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Delivery and Courier Service Drivers occupational group working part-time or full-time earned from **$12,500 to $188,100 a year.** The average salary was **$33,700 a year.**

© Government of Alberta, Human Resources and Employment

Veterinarian

Produced MARCH 2005

Veterinarians diagnose animal illnesses, treat diseased and injured animals, perform surgery, provide preventive medical services and provide advice regarding the care and breeding of animals.

NOC Number(s): 3114
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I O s

Duties

Veterinarians provide animal health and welfare services, and are involved in food safety, public health and environmental management. In general, they:

- perform routine, emergency and post-mortem examinations
- diagnose diseases
- provide advice regarding preventative health care and herd health
- inoculate animals against infectious diseases
- treat a wide range of injuries and disease conditions
- perform dental procedures on various species
- perform surgery on animals
- provide obstetrical and embryo transfer services
- keep records of sick animals
- provide euthanasia services when necessary.

Diagnosing and treating diseases, injuries and other conditions often involves:

- collecting, examining and analyzing body tissue, feces, blood, urine or other body fluids
- taking and interpreting x-rays
- administering anesthesia and performing exploratory surgery.

Preventive medical services include:

- parasite control programs
- vaccination programs against common viral and bacterial diseases
- routine examinations
- consultations regarding hygiene, nutrition, and general care and breeding of animals
- quality assurance programs for food animal species.

Some veterinarians operate mixed animal practices, providing services for a wide range of animals. Others restrict their practices to particular types of animals such as:

- food-producing animals (beef and dairy cattle, sheep, goats, swine, poultry or fish)
- domestic pets and small animals
- exotic birds and animals
- wildlife and alternative livestock
- horses.

Some veterinarians specialize in a medical discipline such as reproduction, surgery, oncology, dentistry, anesthesiology, dermatology, diagnostic imaging, cardiology or pathology.

In addition to the above duties, veterinarians who own private practices have all the responsibilities of small business owners (e.g. human resources and financial management, inventory management, marketing).

Working Conditions

Veterinarians working with livestock may find the work physically demanding. Depending on the work situation, they may be required to lift up to or over 25 kilograms. Some have mobile clinics for treating animals in barns or open fields.

Occupational hazards include contact with potentially dangerous animals and exposure to diseases which may be transmissible to human beings.

After-hours emergency work is required in many types of veterinary practice.

Personal Characteristics

Veterinarians need the following characteristics:

- confidence in working with animals
- a strong commitment to public health and food safety
- stamina and strength
- good powers of observation and judgment
- good communication and public relations skills
- the ability to work well in a team environment
- a willingness to keep up with current developments in the fields of veterinary medicine and business.

They should enjoy working outdoors, working independently and with the public, helping others and making decisions quickly under pressure.

Educational Requirements

Prospective veterinarians must complete **at least two years of university studies followed by a four year Doctor of Veterinary Medicine (DVM) program.** Most applicants for DVM programs have completed more than two years of university work in a related faculty such as science or agriculture. The entrance requirements for these programs vary from one institution to another. In general, however, they include an minimum average (ranging from 60 to 80 per cent) in English 30, Pure Math 30, Biology 30, Chemistry 30 and Physics 30.

In Canada, four year Doctor of Veterinary Medicine (DVM) degree programs are offered at the:

- **University of Saskatchewan** in Saskatoon
- **University of Guelph**
- **University of Montreal** (instruction in French)
- **Atlantic Veterinary College** in Charlottetown.

Course requirements for admission to these programs vary. Students planning to apply for admission to a DVM program should consult institution websites or calendars for information about course and residency requirements.

Post-secondary institutions throughout Alberta offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Veterinary Profession Act and General Regulation, only registered members of the Alberta Veterinary Medical Association (AVMA) may call themselves or practice as Veterinarians. However, animal health technologists may provide veterinary services under the supervision of a Registered Veterinarian.

Employment and Advancement

(section revised JANUARY 2006)

Some veterinarians establish their own veterinary practices but most find employment as associates or partners in established veterinary practices.

Veterinarians who do not choose private or clinical practice may be employed as:

- agricultural commodity inspectors
- food hygienists
- researchers in the field of animal disease

- pharmaceutical company representatives
- administrators of veterinary public health programs
- race horse inspectors at racetracks
- teachers at veterinary colleges
- animal health or public health researchers
- clinical veterinarians for laboratory or zoo animals.

Veterinarians employed by government agencies may advance in grade and salary as they accumulate time and experience on the job.

In Alberta, most people employed as veterinarians are work in the **Professional and Technical Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Professional and Technical Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 900 Albertans are employed in the Veterinarians occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Veterinarians occupational group working part-time or full-time earned from **$35,600 to $171,500 a year.** The average salary was **$75,800 a year.**

Visual Merchandiser

Produced MAY 2003

Visual merchandisers capture consumers' attention through the placement of merchandise, signage and interior displays in retail stores and shopping malls.

NOC Number(s): 5243.3
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I M D

Duties

Most visual merchandisers work for large department stores and retail chains. Their responsibilities and position titles vary from one employer to another but, in general, visual merchandisers:

- arrange showcases, clothes racks, counters and display fixtures
- design lighting and colour range of merchandise
- teach sales staff how to colour co-ordinate clothes racks and counter displays
- work as part of a merchandising team which may include advertising and promotion staff
- attend training sessions and corporate planning meetings to get new ideas for Fall and Spring launches.

They may also:

- co-ordinate construction contractors for major floor changes
- oversee the general cleanliness of the store inside and out
- track rates of sale on the commodities they display.

Visual merchandisers must be aware of the store's layout in intimate detail. Frequent shifts of large quantities of merchandise require merchandisers to be real problem solvers with the ability to anticipate customers' needs.

Some organizations have two levels of visual merchandising positions: one is responsible for the overall look and colour flow of displays, and the other is responsible for maintaining window and other displays on a day-to-day basis.

Displays are usually planned two to four weeks in advance to co-ordinate with special promotions and advertising campaigns. If a visual merchandiser is working exclusively for a chain or a large organization, signage and prop packages are generally provided. Products may be specified for display and guidelines are usually fairly tight to create a uniform store presentation throughout the company.

Freelance merchandisers who work for smaller chains and independent stores may have the opportunity to work under less stringent guidelines. Some do everything from building props to using computers to produce signage.

Working Conditions

Visual merchandisers ensure that stores present a strong corporate image that appeals to the store's target market. Due to constant changes in the retail and fashion market, they must work under tight deadlines. The busiest times of the year are from August to mid-November and March.

Some visual merchandisers travel from store to store, either as an employee of a retail chain or as a freelancer.

Personal Characteristics

Visual merchandisers need the following characteristics:

- artistic ability and imagination
- a keen sense of fashion and trends and willingness to invest the time required to stay current
- the ability to visualize three-dimensional settings
- good problem-solving abilities
- the ability to work independently and in a team environment

- confidence in their ideas combined with the flexibility required to accept other people's suggestions
- good communication skills.

They should enjoy synthesizing information to develop new ideas and find practical solutions to problems, taking a methodical approach to tasks requiring precision and directing the work of others.

Educational Requirements

(section revised DECEMBER 2005)

Visual merchandiser may acquire the necessary knowledge and skills by:

- working with professional visual merchandisers who are willing to spend time sharing their knowledge and experience
- working in related fields such as set design or interior decoration (for more information, see the Set Designer and Interior Decorator occupational profiles)
- taking related post-secondary education.

Most employers prefer to hire applicants who have related post-secondary education.

Art and design programs are offered by post-secondary institutions throughout Alberta. The following institutions offer programs specifically related to visual merchandising:

- **Grant MacEwan College** in Edmonton offers a two year Design Studies diploma program with a specialization in Design and Exhibit Presentation. The admission requirements include a high school diploma with English 30 (or 75 per cent in English 33) and a portfolio of previous work.
- **Olds College** offers one year certificate and two year diploma Fashion programs. The admission requirement is a high school diploma with English Language Arts 30-1 or 30-2 and Applied Math 20 or Pure Math 20.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Visual merchandisers are employed by:

- department stores and retail chains
- media promotion companies
- independent display companies
- co-ordinators of fashion shows
- shopping mall owners.

Experienced visual merchandisers working for large retail stores may advance to senior designer positions. Further advancement opportunities are limited.

Most self-employed display designers have established themselves in the field prior to working on a freelance basis.

Visual merchandisers are part of the larger National Occupational Classification 5243: Theatre, Fashion, Exhibit and Other Creative Designers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Information, Culture and Recreation**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta (employment opportunities are generally best for those who are willing to relocate after their training)
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 600 Albertans are employed in the Theatre, Fashion, Exhibit and Other Creative Designers occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since visual merchandisers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for visual merchandisers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Theatre, Fashion, Exhibit and Other Creative Designers occupational group working part-time or full-time earned from **$13,100 to $106,500 a year.** The average salary was **$28,900 a year.**

Volunteer Manager

Produced FEBRUARY 2005

Volunteer managers plan volunteer involvement in organizations and co-ordinate volunteer programs in a variety of settings.

NOC Number(s): 4212
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: S M I

Duties

Duties and responsibilities vary from one position to another but, in general, volunteer managers:

- plan volunteer programs and identify opportunities for volunteer involvement in not-for-profit and public sector organizations
- recommend policies related to volunteer involvement in an organization
- write role descriptions for volunteers
- design orientation programs for volunteers
- recruit, interview, select and orient volunteers
- implement risk management policies
- develop volunteer recognition programs
- make staff members and the public aware of the volunteer program
- educate staff members about working with volunteers
- provide support for staff who supervise volunteers or, in some cases, supervise volunteers
- evaluate volunteer programs and volunteers
- collect statistics and write reports
- write funding proposals
- administer volunteer program budgets.

Much of the work involves supporting volunteers in their duties and helping staff members and volunteers work together co-operatively. Volunteer managers may also work with a Board of Directors.

Working Conditions

Most volunteer managers work in offices which may be shared with others. Some travel may be required to attend meetings during the day and, sometimes, during evening or weekend hours. Volunteer managers may work part-time, on contract or have additional responsibilities.

Personal Characteristics

Volunteer managers need the following characteristics:

- a demonstrated commitment to volunteerism
- strong interpersonal skills
- organizational and leadership skills
- initiative
- an outgoing, energetic and optimistic manner
- excellent communication skills including writing, negotiation and public speaking skills
- problem-solving and decision-making skills
- patience and tact in dealing with others
- a tolerance for ambiguity
- the ability to multi-task

- the ability to work independently or as part of a team.

They should enjoy helping others, compiling information and maintaining contact with other agencies, and developing innovative approaches to problems.

Educational Requirements

Volunteer managers come from a wide variety of educational backgrounds including volunteer management, adult education, human resource management, public relations, community development, social work, psychology and education. However they acquire them, volunteer managers need computer skills and the following management skills:

- interviewing skills
- training, coaching, team-building and leadership skills
- planning and administrative skills
- marketing skills
- conflict resolution skills.

In Alberta, two post-secondary institutions offer formal training programs in volunteer management:

- **Grant MacEwan College** in Edmonton offers a one year Voluntary Sector Management certificate program with a specialization in volunteer management. The program is delivered in both classroom and distance formats on a part-time or full-time basis. The entrance requirement is a high school diploma with English 30 or equivalent. Grant MacEwan College also offers shorter, non-credit professional development workshops.
- **Mount Royal College** in Calgary offers an eight course Nonprofit Management certificate program with a specialization in volunteer management. Applicants must be at least 18 years of age. The college also offers a four year bachelor's degree program in Nonprofit Studies. The entrance requirement is a high school diploma with English 30 and Social Studies or equivalent.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Volunteer Calgary offers a three day Introduction to Volunteer Management course twice a year that is accepted for credit in the Mount Royal College certificate program.

Employment and Advancement

(section revised JANUARY 2006)

Volunteer managers work in not-for-profit and public sector organizations such as:

- human and social service agencies
- cultural organizations
- leisure and sports organizations
- educational and religious institutions
- health care institutions.

Many volunteer managers work on a part-time or contract basis and must work within small budgets. Advancement opportunities depend on the nature of the organization and the manager's qualifications.

Volunteer managers are part of the National Occupational Classification 4212: Community and Social Service Workers. In Alberta, over 75 per cent of people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 9,600 Albertans are employed in the Community and Social Service Workers occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 160 to 260 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since volunteer managers form only a small part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for volunteer managers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Some volunteer managers are volunteers themselves or work on a contract basis. Salaries for managers who have full-time, paid positions vary considerably. The highest average salaries are in the public sector.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Community and Social Service Workers occupational group working part-time or full-time earned from **$14,100 to $104,900 a year**. The average salary was **$27,800 a year**.

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Warehousing Professionals

Produced FEBRUARY 2006

Warehousing professionals are responsible for general warehousing activities such as shipping and receiving and planning and managing the flow of goods into, within and from organizations.

NOC Number(s): 7452.2
Minimum Education: Designated Occupation
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M i**

Duties

Warehousing professionals oversee the movement of materials in a wide variety of industries that include agriculture, forestry, health, manufacturing, mining, oil and gas, wholesale and retail, and transportation. Their duties vary from one job to another but, in general, responsibilities can be divided into three levels: basic, intermediate and technician.

Warehousing professionals at the **basic** level:

- generate and pick orders
- pack and ship orders
- receive shipments and ensure that they are complete and in good order
- process product returns
- schedule items for delivery and co-ordinate the delivery of products to end users
- maintain inventories
- operate computer systems
- operate non-powered material handling equipment such as dollies, hand trucks and pallet jacks and powered equipment such as forklifts, cranes and conveyers to move items and place them in appropriate storage areas and bins.
- use storage systems.

Warehousing professionals at the **intermediate** level:

- manage inventory
- manage stocking and storage to prevent loss
- prepare and process orders
- process customer returns
- process the return of products to suppliers
- arrange rail, air and road transportation of materials
- calculate transportation costs and prepare transportation documents
- import and export materials
- operate electronic material identification tools and maintain material identification records
- interact with internal and external customers
- participate in business operations and planning.

Warehousing professionals at the **technician** level:

- supervise warehouse personnel
- purchase materials
- control inventory and forecast inventory needs
- apply established principles of inventory management
- plan and supervise safety programs
- oversee the ISO 9000 certification process
- practice Total Quality Management (TQM)
- design and plan warehouses.

Working Conditions

Warehousing professionals usually work indoors in office and warehouse environments. They may also work outdoors in all weather conditions. Most warehousing professionals work a 40-hour, five-day week. In large warehouses, they may work shifts.

The work is physically demanding. Warehousing professionals are on their feet all day and may be required to lift items weighing up to 25 kilograms.

Personal Characteristics

Warehousing professionals need the following characteristics:

- physical strength and stamina
- manual dexterity
- the ability to work independently
- good math, communication and computer skills
- good customer service skills
- the ability to get along well with fellow workers.

They should enjoy taking a methodical approach to their work, operating handling equipment and keeping detailed records.

Educational Requirements

Warehousing professionals is a **designated occupation** in Alberta. This means that certification is not required but trainees can apply to **Alberta Apprenticeship and Industry Training** for an Alberta Occupational Certificate.

To **enter** the warehousing professional:

- **basic** program, no minimum education level is required. However, a high school diploma with at least Alberta Math 14 (or equivalent) is strongly recommended. Applicants must find a suitable employer who is willing to train a trainee. Most employers prefer to hire high school graduates or people who already have related training or experience.
- **intermediate** program, a Warehousing Professional-Basic certificate is required.
- **technician** program, a Warehousing Professional-Intermediate certificate is required.

The **term of training** is a minimum of 12 months (1,500 hours) of work experience for each level.

Applicants who have related training or work experience may be eligible for credit or certification.

The following post-secondary institutions offer related programs:

- **Calgary Board of Education Chinook Learning Services** in Calgary offers a Warehousing certificate program.
- the **Northern Alberta Institute of Technology** in Fairview offers a Warehousing Training certificate program by non-distance and distance delivery. The entrance requirement is English 10 or 13 and a Grade 10 math.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Warehousing professionals are employed by organizations that produce, process or use products such as office supplies, tools, food goods, textile products, farm equipment or industrial supplies.

Most warehousing jobs are located in urban centres where manufacturers, wholesalers and large retailers have their warehouses.

With the appropriate training and work experience, individuals can advance through the three branches of this occupation and move into supervisory positions, or move into related fields such as purchasing, inventory control or materials management. Certified Alberta warehousing professionals who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Warehousing professionals are part of the larger National Occupational Classification 7452: Material Handlers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Wholesale Trade**
- **Transportation and Warehousing**
- **Retail Trade**
- **Management, Administrative and Other Support Services**
- **Food and Beverage Products Manufacturing**
- **Wood Products Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 20,500 Albertans are employed in the Material Handlers occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 260 to 480 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since warehousing professionals form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for warehousing professionals.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the Alberta Occupational Training Committee for this designated occupation, trainees generally earn an average of:

- **$8 an hour up to $17,000 a year** at the basic level
- **$12 an hour up to $25,000 a year** at the intermediate level
- **$16 an hour up to $33,000 a year** at the technician level **(2005 estimate)**.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Material Handlers (Equipment Operators) occupational group working part-time or full-time earned from **$12,300 to $82,700 a year.** The average salary was **$31,400 a year.**

Watch Repairer

Produced APRIL 2003

Watch repairers clean, oil, adjust and repair all types of mechanical and electronic clocks and watches.

NOC Number(s): 7344.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: O I M

Duties

Watch repairers may specialize in either watch repair or clock repair, or work on all types of timepieces. They may provide retail services in a jewellery store or repair shop, or provide wholesale services (retail companies send time pieces to them for repair at wholesale prices).

In general, to locate and correct defects, watch repairers follow a set routine that involves:

- asking the customer about the timepiece's past performance
- examining the mechanism, sometimes using a magnifying glass or loupe
- taking the timepiece apart, checking for defective parts, rust or misalignment of parts
- replacing or repairing worn or broken parts
- cleaning all parts using special cleaning and rinsing solutions and ultrasonic or mechanical cleaning machines to remove dirt and dried lubricants.

Watch repairers may also:

- test and change watch batteries
- make parts for old or discontinued time pieces
- keep records of serial and model numbers, work performed and charges for repairs.

After re-assembling a timepiece and before returning it to the customer, watch repairers use a timing machine to check timekeeping accuracy.

Working Conditions

Watch repairers sit most of the time, working at well-lighted benches. In retail shops such as jewellery or repair shops, they may work in a room at the back of the store or on an upper floor. They may be required to work some evenings and weekends. In wholesale establishments, hours of work may be shorter but the work may be less varied.

Watch repairers who repair large timepieces may make house calls.

Personal Characteristics

Watch repairers need the following characteristics:

- mechanical aptitude
- good eyesight, with or without glasses
- good form perception
- steady hands and good finger dexterity
- good organizational skills and neat work habits
- patience.

They should enjoy using tools and instruments to perform tasks requiring precision, analyzing information to identify the causes of malfunctions and taking a methodical approach to their work.

Educational Requirements

The recommended way to become a watch repairer is to take **a course in horology**, the science of measuring time by mechanical means. It is possible to train as a watch repairer by working with an experienced watch repairer for at least four years but this practical training should be supplemented by study of the theoretical aspects of watch-making.

Prospective watch repairers should discuss their career plans with experienced watch repairers before enrolling in a training program. Horology courses are offered by the **British Horological Institute** in the United Kingdom and the **National Association of Watch and Clock Collectors** in the United States.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Watch repairers are employed in:

- jewellery stores
- department stores
- repair shops that cater to the public or are associated with a factory
- wholesale repair shops.

Experienced watch repairers may specialize in unusual types of repair or advance to supervisory positions. In small shops, there is limited opportunity for advancement. Some experienced watch repairers set up their own watch repair shops or retail stores.

Watch repairers are part of the larger National Occupational Classification 7344: Jewellers, Watch Repairers and Related Occupations. In Alberta, most people employed in this classification work in the following industries:

- **Repair, Maintenance, Personal and Other Services**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

About 300 Albertans are employed in the Jewellers, Watch Repairers and Related Occupations group which is expected to expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since watch repairers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for watch repairers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised MAY 2004)

Watch repairers' wages **vary tremendously**. Experienced watch repairers may be paid an hourly wage or work on a commission basis, or a combination of both. The profits made by self-employed watch repairers (who may also sell watches and jewellery) depend on market conditions and their business skills.

Water and Wastewater Treatment Plant Operator

Produced FEBRUARY 2003

Water and wastewater treatment plant operators monitor and operate control systems and equipment in water purification and treatment plants, and wastewater, sewage treatment and liquid waste plants.

NOC Number(s): 9424.1, 9424.2
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: O I M; O I M

Duties

Water treatment plant operators control the processes and equipment used to clarify, purify and disinfect surface or well water for human consumption.

Wastewater treatment plant operators control the processes and equipment used to treat and dispose of sewage and industrial wastes.

Duties and responsibilities vary depending on the size and complexity of the plant but, in general, water and wastewater treatment plant operators:

- read and interpret meters, gauges and other sensing devices to monitor plant operation
- adjust controls to regulate flow coming into the plant and monitor its progress through various processes in the plant
- operate pumps, valves, equipment and chemical-feeding systems
- test and adjust chemical feed rates to ensure quality for disinfection, taste, odour and suppressants
- take samples of the water or wastewater
- perform routine laboratory tests and interpret results
- keep detailed daily records of chemical test results, readings and changes in plant operation
- prepare monthly and annual reports
- operate computer data acquisition and data control and alarm systems
- ensure that water or wastewater meets Alberta Environment standards at all times.

They may also:

- maintain equipment and make minor repairs to valves, pumps or other equipment
- deal directly with the public regarding water quality complaints and emergencies
- investigate taste and odour complaints
- monitor truck dump sites, which may involve sampling and interpreting lab analyses for approval to discharge
- operate sludge handling systems
- monitor and make adjustments to biological processes.

In larger plants, water and wastewater treatment plant operators are usually assigned to a particular treatment area or station. In small plants, they may operate water distribution and wastewater collection systems as well as treatment systems. In small towns or villages, they may also be responsible for water and sewer line repair and street maintenance, which may involve pick and shovel work and/or operating machines such as pneumatic jack hammers, graders and backhoes.

Working Conditions

Water and wastewater treatment plant operators work indoors and outdoors. The working environment can be dirty, cold, hot or noisy. At times, chemicals and wastewater plants may emit unpleasant odours. Safety precautions are required to reduce the risk of injury from working with dangerous gases, open tanks, electrical equipment, chemicals, confined spaces and slippery walkways. Operators may be required to lift bags of chemicals weighing up to 25 kilograms.

Since treatment plants generally operate 24 hours a day, seven days a week, operators may work shifts that include weekends and holidays. Overtime may be required during spring run off or for emergencies such as flooding or equipment failure.

Personal Characteristics

Water and wastewater treatment plant operators need the following characteristics:

- good hearing, eyesight and colour vision
- good health and stamina
- the ability to climb ladders, lift, bend and work in awkward positions
- manual dexterity
- mechanical aptitude
- good arithmetic skills for calculations using formulas, percentages and ratios
- good oral and written communication skills
- a responsible, conscientious attitude.

They should enjoy using tools and instruments to control systems and equipment, analyzing test results and instrument readings, and taking a methodical approach to collecting and analyzing samples.

Educational Requirements

The minimum education requirement for water and wastewater treatment plant operators is a **high school diploma** or equivalent, preferably with courses in mathematics, biology, chemistry and physics. Most employers prefer to hire applicants who have been certified by Alberta Environment (see Other Requirements below), are graduates of a post-secondary program in water and wastewater treatment, or have a background in chemistry, hydraulics, instrumentation and computers.

Employers may require job applicants to have a valid Alberta driver's license.

In Alberta, the **Northern Alberta Institute of Technology** in Edmonton offers a one year co-op Water and Wastewater Technician certificate program. This program is also offered on a part-time distance delivery basis. The entrance requirement is a high school diploma or equivalent.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

All water and wastewater treatment plants in Alberta must have at least one certified operator on site. There are four levels of certification, each of which has progressive education, work experience and examination requirements. For more detailed information, contact Alberta Environment.

Employment and Advancement

(section revised JANUARY 2006)

Most water and wastewater treatment plant operators are employed by municipal governments. Others are employed by:

- regional water/wastewater boards
- the federal government (for example, in the Canadian Forces)
- private utility companies
- large industrial plants
- provincial parks
- engineering consulting firms
- operator training services.

Some operators contract their services to several small communities.

Operators in small towns may be employed part-time or have additional responsibilities. They may be required to be certified by Alberta Environment for water distribution and collection **and** water treatment and wastewater treatment.

Advancement to supervisory positions generally requires certification. The level of certification required depends on the

size and complexity of the treatment plant. For example, supervisors at village treatment plants may need a level one certificate; senior supervisors at large city facilities may need a level four certificate. Advancement to management positions in large facilities may require additional post-secondary education.

Water and wastewater treatment plant operators are part of the larger National Occupational Classification 9424: Water and Waste Plant Operators. In Alberta, over 75 per cent of people employed in this classification work in the **Utilities** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Utilities industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

Over 550 Albertans are employed in the Water and Waste Plant Operators occupational group which is expected to grow 0.3 to 1.3 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Hourly wages for treatment plant operators vary depending on the size of the plant and the certification levels required, but generally range from **$12 to $28 per hour**.

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Water and Waste Plant Operators occupational group ranged from **$19,900 to $44,500 a year.** After three years, salaries ranged from **$25,000 to $49,400 a year.** The average salary was **$44,900 a year**.

Water Well Driller

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Water well drillers set up and operate mobile rotary, boring or cable tool drilling rigs used to drill residential, commercial and industrial water wells. They also conduct environmental assessment drilling.

NOC Number(s): 7373
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: O M i

Duties

To find potable water that is clean and safe for drinking, water well drillers must know the geological formations of the area in which they are working. They may assist customers in locating a well and estimating the cost.

After setting up the drilling rig, water well drillers:

- operate the rig to bore a hole for the well and line the hole with well casings (steel or plastic pipes)
- record information about the geological formations encountered
- put screens and pumps in place to develop the well
- design and install a pumping system
- clean and disinfect the well in preparation for use.

Water well drillers also disinfect, re-construct and re-develop older contaminated wells and water pumping systems.

Working Conditions

Water well drillers work outdoors and usually travel to work sites. The work is strenuous, noisy and dirty. Hours of work vary because some jobs must continue non-stop until completion. There is some risk of injury when working with power equipment.

Water well drillers may be required to lift equipment weighing over 25 kilograms.

Personal Characteristics

Water well drillers need the following characteristics:

- physical strength and stamina
- mechanical aptitude
- manual dexterity
- the ability to judge distances and spatial relationships
- the ability to work independently or with others.

They should enjoy scheduling their own hours and working independently.

Educational Requirements

To work in Alberta, water well drillers must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is two years (two 12-month periods) that include a minimum of 1,800 hours of on-the-job training and six weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at Red Deer College.

Outside the apprenticeship program, **Red Deer College** offers a one year Water Management and Drilling certificate of completion program through Continuing Education by distance. There are no formal admission requirements. Red Deer College also offers Water Well drilling programs and Pump Installer distance delivery courses.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Most water well drillers are self-employed. Some are employed by water well drilling companies. Many water well drilling operations are family-run businesses.

The demand for water well drilling services slows down somewhat in the winter. In the off-season, water well drillers may:

- work for construction companies drilling holes for pilings or drilling test holes
- maintain and upgrade their equipment
- work with water purification and water pumping systems.

Experienced water well drillers may advance to supervisory positions. Alberta certified journeyman water well drillers who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, most people employed as water well drillers work in the **Construction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Construction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 350 Albertans are employed in the Water Well Drillers occupational group, which is expected to grow up 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice water well drillers earn at least 60 per cent of the journeyman wage rate in their place of employment in the first year and 85 per cent in the second. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$14 to $24 an hour plus benefits** (2004 estimate).

In 2003, Albertans working in the Water Well Drillers occupational group earned **up to $66,800 a year as a starting wage.** The average salary was **$63,400 a year** (2003 Alberta Wage and Salary Survey).

Web Designer

Produced JULY 2004

Web designers create websites for the Internet and sites internal to their organizations.

NOC Number(s): 2175
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I M D**

Duties

This is a new and evolving occupation. Duties and responsibilities vary considerably from one position/project to another depending on the organization's needs. In general, however, web designers work with a wide variety of people in an organization to:

- determine website goals and objectives
- design website content that satisfies the webmaster, website content writers in the organizations and website users external to the organization
- use graphics programs or work with graphic artists to create unique graphics for the site that do not make site access speeds unacceptably slow
- work with marketing experts to ensure that advertisements get maximum exposure
- convert written, graphic, audio and video components to Internet-compatible formats by using software designed to facilitate the conversion process or by doing the required programming themselves
- ensure that the site operates as planned by performing site and usage analyses and modifying the site as needed
- upgrade site content on an ongoing basis to improve and keep the site visually interesting.

In large organizations, design and technical responsibilities may be divided among two or more employees.

Web designers may work with computer programmers to design and develop business applications and software tools for electronic publishing and database access.

Working Conditions

Web designers may work standard weekday hours in an office environment or work primarily evening and weekend hours (when they have access to servers and systems while fewer users are online). Overtime is often required to meet project deadlines. Occupational hazards include eyestrain and injuries related to repetitive movement.

The work can be stressful when there are technical problems and when interested parties have conflicting ideas about the design or content of a website.

Personal Characteristics

Web designers need the ability to:

- think logically and concentrate for long periods of time
- organize information effectively
- pay attention to details to avoid time-consuming and therefore costly errors
- remain patient and persistent when debugging programs
- communicate ideas clearly in person and on paper
- get along well with other team members.

They should enjoy analyzing and developing information, performing tasks requiring precision and consulting with others.

Educational Requirements

(section revised FEBRUARY 2006)

Web designers come from a wide variety of backgrounds. Some employers require applicants to have at least **two years of related post-secondary education**.

Many web designers have moved into this rapidly evolving occupation from other occupations. For example, some web designers are graduates of post-secondary education programs in computer science who have acquired the necessary writing, graphic design and management knowledge and skills through working closely with other professionals such as graphic artists and marketing managers, and through professional development activities (e.g. reading, personal experimentation, attending seminars). For information about post-secondary education programs in computer science, see the Computer Programmer occupational profile.

Some web designers have worked in fields other than computer science and acquired the necessary computer skills through work experience and professional development activities. For more information about related occupations, see the Interactive Media Developer, Graphic Designer, Librarian, Marketing Manager and Technical Writer occupational profiles.

Whatever their background, web designers must continuously upgrade their knowledge in this rapidly changing field.

The following post-secondary institutions offer programs specifically related to website design and development:

- **Academy of Learning**, a private vocational school in Edmonton South, offers a 52 week Multimedia Developer for the Internet program.
- **Alberta Career Computer Center Inc.**, a private vocational school in Edmonton, offers a 23 week Microcomputer Office and Web Design program.
- **Bow Valley College** in Calgary offers a part-time Web Site Development certificate program.
- **CDI College of Business, Technology and Health Care**, a private vocational school in Calgary and Edmonton, offers a 50 week Programmer Analyst/Internet Solution Developer program.
- **DevStudios**, a private vocational school in Edmonton, offers 30 week programs in E-Commerce MCSD.NET and e-Media and Design.
- **Grant MacEwan College** in Edmonton offers a two year Digital Arts and Media diploma program.
- **GURU Digital Arts College** in Edmonton offers a 24 week Digital Media Producer program.
- **Infogem Institute of Technology**, a private vocational school in Calgary, offers a 26 week CIW Master Designer Plus program.
- **Lethbridge Community College** offers a two year Multimedia Production diploma program.
- **Mount Royal College** in Calgary offers a Web Design certificate program through Continuing Education.
- **Red Deer College** offers a 21 week Multimedia Web Developer certificate program through Extension Services.
- **Southern Alberta Institute of Technology** in Calgary offers a two year New Media Production and Design diploma program.
- **Sprott-Shaw Community College** in Calgary offers a 35 week part-time programs: Web Developer, and Computer Graphics and Web Media.
- The **University of Calgary** offers a Web Designer and Web Developer certificate programs through the Faculty of Continuing Education.
- The **University of Lethbridge** offers a four year Bachelor of Fine Arts (BFA) degree program specializing in New Media.

Admission requirements vary but generally include a high school diploma with Grade 12 English and at least Grade 11 math, or equivalent. Some programs require a minimum average (ranging from 60 to 70 per cent) and specific courses (e.g. English 30, Pure Math 30). For current information on specific programs and mature student admission policies, check post-secondary calendars or websites.

Continuing education programs are often offered on an as needed basis.

Other Requirements

(section revised OCTOBER 2004)

Information Systems Professional is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself an Information Systems Professional, you must be a registered member of the Canadian Information Processing Society of Alberta (CIPS Alberta). You do **not** have to be registered if you do not call yourself an Information Systems Professional.

Employment and Advancement

(section revised JANUARY 2006)

Web designers may be employed by or work on a contract basis for a wide variety of organizations in the private, public and non-profit sectors. Employers may ask job candidates to submit a Web portfolio of current, active websites they have created plus descriptions of site goals, target audiences and results.

Experienced web designers may move into related occupations such as systems security analyst, information systems quality assurance analyst, computer programmer or interactive media developer. Those who have management skills may become webmasters.

Web designers are part of a larger computer systems analysts occupational group. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Oil and Gas Extraction**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,800 Albertans are employed in the Web Designers and Developers occupational group which is expected to grow 3.0 to 4.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 80 to 120 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since web designers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for web designers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Income figures for web designers **vary considerably** depending on their qualifications and the scope of the position. Inexperienced web designers may work on volunteer projects or for relatively little compensation to gain experience and build a portfolio.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Web Designers and Developers occupational group working part-time or full-time earned from **$15,900 to $143,200 a year.** The average salary was **$60,600 a year.**

© Government of Alberta, Human Resources and Employment

Web Technician

Produced JULY 2004

Web technicians set up and maintain Internet and intranet websites and web server hardware and software, and monitor and optimize network connectivity and performance.

NOC Number(s): 2281.2
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O m i**

Duties

The Internet is a huge network made up of millions of links between web servers (website computers). On each server, there may be one or more:

- Internet websites designed to facilitate communication between an organization and the general public
- intranet websites designed to facilitate communication among an organization's employees (intranet sites are not available to the public).

Web technicians help webmasters, web designers and computer programmers set up and maintain websites and web servers. Their duties and responsibilities vary from one job to another but, in general, web technicians:

- implement network traffic and security monitoring software, and optimize server performance
- modify web pages, applets and scripts
- research and apply meta-data to websites, and register websites with search engines
- respond to requests for help and information from website visitors and website designers
- ensure websites operate correctly by monitoring and testing website performance on an ongoing basis
- perform web server backup and recovery operations.

For information about computer specialists who operate and support the use of other types of networks, see the Computer and Network Operator occupational profile.

Working Conditions

Web technicians work in environmentally controlled computer rooms and offices. To avoid disrupting normal use of websites during peak use periods, technicians often work evenings and weekends. They may work 8 or 12 hour shifts (days, nights or weekends).

Some lifting (up to 10 kilograms) is required.

Personal Characteristics

Web technicians need the following characteristics:

- the ability to learn quickly, think logically and analyze complex problems
- the ability to express ideas in clear, understandable terms and communicate effectively in writing
- the ability to think creatively and visualize ideas
- good interpersonal skills for dealing with website users
- a keen interest in keeping up to date with technological developments.

They should enjoy analyzing information and solving problems, taking a methodical approach to tasks requiring precision and working with others.

Educational Requirements

Web technicians need expert-level HTML skills (HTML is the document description language used for most websites). They may be:

- graduates of post-secondary programs related to computer science
- liberal arts graduates who have acquired the necessary technical skills by taking related training programs.

In Alberta, many universities, colleges, technical institutes and private vocational schools offer post-secondary programs related to computer science. For lists of relevant programs, see the Computer and Network Operator, Computer Programmer and Web Designer occupational profiles.

Prospective web technicians are strongly advised to discuss their training options with potential employers before enrolling in a training program. Some employers require job applicants to have certification or training from specific software vendors.

Other Requirements

(section revised OCTOBER 2004)

Information Systems Professional is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself an Information Systems Professional, you must be a registered member of the Canadian Information Processing Society of Alberta (CIPS Alberta). You do **not** have to be registered if you do not call yourself an Information Systems Professional.

Employment and Advancement

Web technicians are employed by Internet service providers (ISPs), and organizations throughout the public and private sectors that maintain large websites.

Web technician is an entry level position in which new post-secondary graduates can learn more about server administration, CGI scripting and the maintenance of large websites. Experienced web technicians may move into other computer-related occupations such as computer and network operator, computer programmer, interactive media developer or web designer. Web technicians who have management-related education or experience may become webmasters.

Web technician is a new and rapidly growing occupation.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Web Technicians occupational group working part-time or full-time earned from **$19,700 to $96,200 a year.** The average salary was **$65,400 a year.**

© Government of Alberta, Human Resources and Employment

Webmaster

Produced JULY 2004

Webmasters are responsible for the design, development, maintenance and success of World Wide Web sites on the Internet and sites internal to their organizations.

NOC Number(s): 2175
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: I M D

Duties

This is a rapidly evolving occupation in which duties and responsibilities vary considerably from one job to another. For the purposes of this profile, webmasters are defined as managers who are responsible for their organizations' websites. For a description of the activities involved in designing websites, see the Web Designer occupational profile. For information about activities involved in website development, see the Computer Programmer profile.

In general, webmasters:

- ensure that websites advance their organizations' goals
- ensure optimum site performance on an ongoing basis (this often requires balancing graphic appeal against access speed requirements as well as overseeing technical activities)
- promote the website within the organization and educate people about related issues and technology
- develop and implement budgets for website development and maintenance
- co-ordinate the work of people who do website-related work (e.g. web designers, web technicians)
- select server or desktop environments and web development tools
- set standards and procedures regarding the design and production of additions to the site
- use software to generate and track site access statistics.

In large organizations, webmasters may work with a team of information specialists or a committee of representatives from various parts of the organization. In a growing number of organizations, webmasters are also responsible for developing and maintaining an intranet (an internal network similar to the Internet but accessible only to personnel within the organization).

In small organizations, webmasters may be personally responsible for everything from the initial design of the website to coding documents and monitoring site traffic and performance.

Working Conditions

Webmasters generally work standard weekday hours in an office environment. Evening and weekend work may be required for website installation and maintenance activities.

The work can be stressful when:

- there are technical problems with websites or intranets
- personnel from different parts of the organization have conflicting ideas about the purpose, design and content of the site or intranet
- people have unrealistic expectations regarding system reliability or the frequency or speed of information updating.

Occupational hazards include eyestrain from spending long hours in front of a computer screen and repetitive movement injuries.

Personal Characteristics

Webmasters need the following characteristics:

- the ability to communicate effectively with all kinds of people, in person and in writing
- the ability to lead and work effectively as part of a team
- the ability to pay careful attention to details
- excellent organizational skills
- an interest in keeping up to date with rapidly changing technology
- the ability to anticipate change and make decisions in an uncertain environment.

They should enjoy co-ordinating information, negotiating with people and developing innovative solutions to problems.

Educational Requirements

In the past, the person who first advocated the development of an organizational website was often the person who eventually became the organization's webmaster. This person may have come from a wide variety of backgrounds (e.g. marketing and business management, public relations, computer science, library science or graphic design).

Webmasters need a combination of management and technical expertise. The specific qualifications required vary depending on the nature of the position and the employing organization but generally include an understanding of principles and current practices in:

- management and administration
- technical writing and graphic design
- computer hardware and software systems.

Webmasters generally acquire the knowledge and skills they need through a combination of work experience and formal education. For example, an experienced marketing manager can acquire the required technical expertise through professional development activities such as attending seminars, reading extensively and working closely with other professionals (e.g. graphic artists, writers, computer engineers, computer programmers, database analysts, librarians). Likewise, people educated and experienced in other occupations can acquire management-related knowledge and skills through professional development acitivities.

Some employers require webmasters to have considerable computer expertise including a working knowledge of specific computer languages such as HTML (hypertext markup language), Java, PERL, ActiveX, CGI scripting or database expertise. For other positions, an overall knowledge of what is technologically possible is more important than programming skills in specific languages.

Those interested in becoming webmasters should begin by taking a post-secondary program related to management and administration, computer science or web design. (For more information, see the Web Designer, Marketing Manager, Software Engineer, Computer Programmer, Graphic Designer, Librarian and related occupational profiles.)

Continuing education programs are often offered on an as needed basis.

Other Requirements

(section revised OCTOBER 2004)

Information Systems Professional is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself an Information Systems Professional, you must be a registered member of the Canadian Information Processing Society of Alberta (CIPS Alberta). You do **not** have to be registered if you do not call yourself an Information Systems Professional.

Employment and Advancement

Webmasters may be employed by or work on a contract basis for organizations of all types including:

- wholesale or retail businesses
- large corporations
- government departments
- industrial establishments
- consulting firms
- post-secondary institutions
- non-profit organizations.

Webmaster is a management level position requiring previous related experience. Opportunities for further advancement depend on the nature of the organization and the webmaster's qualifications.

Salary

Income figures for webmasters **vary greatly** depending on the scope of the position and the webmaster's training and experience. Webmasters in small, non-profit organizations may be volunteers.

Salaries for webmasters who have management responsibilities are generally higher than for those who do not.

© Government of Alberta, Human Resources and Employment

Welder

Produced FEBRUARY 2006

Welders join and sever metal components and make metal parts, tools, machines and equipment.

NOC Number(s): 7265.1
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O M I**

Duties

Welders use the following welding processes and fillers depending on the type of metal, its size and shape and requirements for finished product strength.

- **Electric arc welding** - heat is created as an electric current flows through an arc between the tip of the welding electrode and the metal
- **Gas welding (oxy-acetylene welding)** - the flame from the combustion of burning gases melts the metal
- **Arc and gas welding** - filler materials are melted and added to fill the joint and make it stronger
- **Resistance welding** - the metal piece itself is melted as current flows through it and no filler is added.

Duties vary from one position to another but, in general, welders:

- develop patterns for projects or follow directions given in layouts, drawings and work orders
- clean, check for defects and shape component parts, sometimes using a cutting torch
- weld parts together.

Welders may also build up worn parts by welding on layers of high-strength hard-metal alloys.

Working Conditions

Welders may work outdoors on construction sites or indoors in production and repair shops. In some cases, they have to travel to job sites (e.g. oilfields). A 40-hour work week is normal, although overtime is sometimes required to meet project deadlines. There is some risk of injury when working with torches and hot metals that produce sparks and toxic gases.

Welders may be routinely required to lift heavy items.

Personal Characteristics

Welders need the following characteristics:

- manual dexterity
- good vision (glasses are acceptable)
- good hand-eye coordination
- the ability to concentrate on detailed work
- the ability to work with little direction or supervision
- patience
- the ability to keep up to date with changing technology.

They should enjoy building and working with little direction or supervision.

Educational Requirements

To work in Alberta, welders must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is three years (three 12-month periods) that include a minimum of 1,560 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Welder apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- Keyano College in Fort McMurray
- Lakeland College in Vermilion
- Lethbridge Community College
- Medicine Hat College
- the Northern Alberta Institute of Technology (NAIT) in Edmonton and Fairview
- Northern Lakes College in Grouard
- Portage College in Lac La Biche
- Red Deer College
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

NAIT also offers technical training by distance delivery.

Competency-Based Apprenticeship Training (CBAT) is also offered by NAIT and Red Deer College.

Outside the apprenticeship program, the **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Welding Engineering Technology diploma by distance and non-distance. The entrance requirement is a high school diploma with Pure Math 30 or Math 30 and English 30 or 33 or English Language Arts 30-1 or 30-2. This course is accredited by the Canadian Council of Technicians and Technologists.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Welders are employed in a variety of industries, including vessel or structural steel assembly, pipeline construction, commercial construction, industrial construction, steel fabrication and heavy equipment repair. Some open their own repair shops or work as portable rig welders who contract out their services.

Experienced welders may advance to positions such as welding inspector, welding foreman or supervisor, or plant supervisor. Alberta certified journeyman welders who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Welders are part of a larger welders and soldering machine operators occupational group. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Repair, Maintenance, Personal and Other Services**
- **Other Manufacturing**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)

- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 11,150 Albertans are employed in the Welders and Related Machine Operators occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 270 to 390 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since welders form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for welders.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice welders earn at least 60 per cent of the journeyman wage rate in their place of employment in the first year, 75 per cent in the second and 90 per cent in the third. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary considerably, but generally range from **$20 to $30 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Welders and Related Machine Operators occupational group working part-time or full-time earned from **$20,400 to $170,300 a year.** The average salary was **$58,200 a year.**

OCCinfo Alberta Occupational Profiles

Alberta Human Resources and Employment

Well Service Equipment Operator

Produced JULY 2005

Well service equipment crews are called in at different times during the development of oil and gas wells for specialized oil field service operations such as cementing, acidizing, fracturing or nitrogen injection.

NOC Number(s): 8412.2
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O M i**

Duties

Well service equipment operators provide a variety of specialized services. Their responsibilities and job titles vary from one employer to another and from one type of service to another but, in general, they:

- prepare trucks, equipment, materials and supplies
- deliver equipment and materials to well sites
- meet with rig personnel to discuss and plan specialized operations
- use hand tools to assemble and connect equipment
- direct and assist helpers, floorhands and derrickhands in the use of hoisting equipment where necessary
- monitor control panels and operate equipment controls
- keep records and prepare reports about service operations
- train and supervise helpers
- service and maintain equipment.

Power tong operators operate hydraulic power tongs that are used to connect casing as it is lowered into a well. They manage hydraulic controls that provide power and operate the power tongs, and monitor pressure gauges to make sure the correct amount of pressure is applied so casing joints are connected properly.

Down-hole tool operators, sometimes called fishing tool operators, specialize in the use of down-hole tools. They meet with drilling personnel to determine the best method and tool to use, and direct tool assembly and operation.

Pumping services involve the use of high pressure pumping equipment and chemicals, fluids or gases. Different materials are required for different operations, and pump equipment operators usually specialize in a particular type of service:

- **Cementing** services are needed when an oil or gas well is being cased or for remedial work. During the cementing operation, a special mixture of cement, water and additives is pumped through the casing or tubing to seal the casing and secure it in place.
- **Acidizing or fracturing** services may be needed to increase the flow of oil or gas from a well. In acidizing, a strong acid such as hydrochloric acid is pumped into the well to open flow channels in the rock. In fracturing, a treating fluid containing granular material (called sand) is pumped under pressure into the well to fracture the underground rock formation, create channels in the rock formation and improve production.
- **Nitrogen injection** services involve pumping nitrogen gas in combination with acidizing/fracturing fluids into wells to increase the flow of oil or gas, displace fluid from the well bore or pressure test well heads and tubing.

Depending on the job, pump equipment operators may have additional responsibilities such as mixing materials.

Working Conditions

Well service equipment crews often work out of central field stations. Field stations are located throughout the province, often in towns or cities near major drilling or production locations.

Specialized services may be required at any time of the day or night so well service equipment operators usually work on a 24 hour on-call basis. They must do a lot of travelling, frequently work long hours and may be required to lift items weighing up to 25 kilograms.

Much of the work is performed outdoors exposed to all types of weather conditions and the dirt, dust, noise and fumes common around rigs. Because the work is potentially hazardous, safety is a primary concern for everyone on a rig. Hazards include:

- working on wet, slippery rig floors
- working near or with heavy tools and moving machinery
- exposure to chemical substances such as drilling mixture additives.

Personal Characteristics

Well service equipment operators need the following characteristics:

- good communication skills (to understand and give clear, concise directions)
- initiative
- good analytical and decision-making skills
- physical strength and stamina
- the ability to work efficiently and effectively under pressure
- the ability to pay close attention to detail
- the ability to work well alone and with other people.

They should enjoy operating machinery and complex equipment, having clear rules and guidelines for their work, and solving problems.

Educational Requirements

Well service equipment operators should have at least a **high school diploma** combined with the ability and desire to learn quickly and put into practice what they have learned. Related post-secondary education and experience on a drilling rig crew or a service rig crew are definite assets. For more information, see the Drilling Rig Leasehand/Floorhand, Service Rig Personnel and Rig Technician occupational profiles.

Pump equipment operators often learn through special company training programs and on-the-job experience. They transport and use materials and gases that may be highly corrosive or poisonous (hazardous if incorrectly handled) so they are usually required to have:

- an Alberta Class 1 operator's license with air or heavy truck endorsement and no more than six demerits
- certificates in first aid, hydrogen sulphide safety (H2S Alive), blowout prevention, transportation of dangerous goods (TDG), Waste Hazard Material Information System (WHMIS) and cryogenic safety.

Some employers require acidizing operators to have related post-secondary education such as a two year diploma or four year degree in petroleum engineering (for more information, see the Petroleum Engineer and Petroleum Engineering Technologist occupational profiles).

Employment and Advancement

(section revised JANUARY 2006)

Well service equipment operators are employed by contractors in the oil and gas industry. They may start as helpers and, after on-the-job experience and in-house courses, move into operator positions.

Pump equipment operators usually specialize in one type of operation and may advance to the position of field supervisor. Those who are knowledgeable about all types of pumping operations and have leadership skills may advance to the position of station manager.

Well service equipment operators are part of the larger National Occupational Classification 8412: Oil and Gas Well Drilling Workers and Services Operators. In Alberta, most people employed in this classification work in the **Oil and Gas Extraction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Oil and Gas Extraction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 10,350 Albertans are employed in the Oil and Gas Well Drilling Workers and Services Operators occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 250 to 370 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since well service equipment operators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for well service equipment operators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Oil and Gas Well Drilling Workers and Services Operators occupational group working part-time or full-time earned from **$24,800 to $257,000 a year.** The average salary was **$60,100 a year.**

Wildland Firefighter

Produced FEBRUARY 2004

Wildland firefighters work in crews to suppress fires in remote locations.

NOC Number(s): 8422
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O M i**

Duties

Wildland firefighters work in several different types of wildland firefighting crews:

- **Helitack Crews - Type 1 Rappel** are specialised crews based in Edmonton that provide initial attack and support where they are needed. Helitack is an abbreviation for helicopter attack.
- **Helitack Crews - Type 1** are mobile, highly trained initial attack and support crews that are usually based in Wildfire Management Areas. They use both ground and helicopter transportation to get to where they are needed.
- **Sustained Action Crews - Type 2** are intermediate level firefighting crews that often include post-secondary students and people associated with First Nations Aboriginal communities, Metis settlements and communities. They are employed by contractors to suppress spreading fires that require the efforts of many units.
- **Sustained Action Crews - Type 3** have basic training. They mop up to contain or extinguish hot spots after a fire is under control and provide additional support where needed.

Duties and responsibilities vary from one type of crew to another but, in general, wildland firefighters:

- identify parts of a fire (eg. head, flank , rear, anchor point), escape routes and safety zones
- watch for threats to the control line and counter them
- check in and out at the beginning and end of each shift, and brief and debrief the crew leader
- identify hazards and make other firefighters aware of them
- systematically locate and extinguish hot spots in mop up operations
- fell trees and dig trenches to construct firelines
- use and maintain hand tools and equipment safely and effectively
- rearrange or remove fuels near the fireline
- use drip torches or fuses to conduct burnout operations
- report conditions or activities that seem unsafe or counterproductive
- maintain communications with other crew members and leaders
- look out for the safety and welfare of crew members including themselves
- report injuries and accidents.

Crews may be flown into remote locations to fight fires that are difficult to reach by other means. When required, Type 1 - Rappel crews rappel to the ground from helicopters.

Working Conditions

Wildland firefighters work outdoors in all weather conditions, usually in isolated areas. Their work is dangerous and physically demanding. Occupational hazards include smoke, intense heat, falling trees and branches, wildlife and strong winds that can quickly turn a small fire into an inferno.

Wildland firefighters are required to work on steep and uneven terrain quickly, bend down, stoop and crouch while wearing protective gear and carrying heavy equipment. They carry and use heavy equipment such as hand tools, chain saws, water pumps and hoses, often for long periods of time.

Wildland firefighters may be required to work up to 24 day shifts and may be relocated anywhere in the province as needed.

Personal Characteristics

Wildland firefighters need the following characteristics:

- a safety conscious attitude
- excellent health and physical fitness
- the physical strength and agility required to climb and balance when moving over rough terrain
- good spatial perception and awareness of what is happening around them
- good communication and basic analytical skills
- an interest in working outdoors
- the ability to work effectively with a team under stressful conditions
- the ability to react quickly to the unexpected.

They should enjoy having routine, organized work that is punctuated by periods of intense activity, and technical activities such as operating two-way radios and meteorological instruments.

Educational Requirements

In Alberta, wildland firefighters must successfully complete a training program approved by **Alberta Sustainable Resource Development**. All applicants must complete a physical fitness test and complete an interview before they are accepted for training. There is a weight limitation for individuals on crews that may be transported by helicopter.

- **Sustained Action Crews - Type 3** complete a seven day course. Instruction covers radio operation, equipment use/maintenance, map and compass reading, firefighting methods, fire behaviour, helicopter safety, pump and power saw training, and bear safety.
- **Sustained Action Crews - Type 2** are recruited and selected in consultation with local First Nations Aboriginal communities and Metis settlements by a local contractor. The contractor is responsible for providing an approved two week training course. Candidates must have valid standard first aid certificates and Class 5 driver's licences. Courses are conducted at various times throughout the year and co-ordinated by local contractors.
- **Helitack Crews - Type 1** are hired after successfully completing a two week training course at the **Hinton Training Centre**. Prior to training, candidates must have a valid standard first aid certificate with CPR, a valid Class 5 Alberta driver's licence and current abstract, and a high school diploma or equivalent.
- **Helitack Crew - Type 1 Rappel** members are selected after an interview and physical fitness test. Prior to training camp, candidates must have a valid standard first aid certificate with CPR, a valid Class 5 Alberta driver's licence and current abstract, and a high school diploma or equivalent.

All firefighters must be at least 18 years of age and pass a rigorous physical fitness test prior to and during each fire season. Those interested in a lifelong career in forest fire fighting should complete a forestry-related post-secondary program. For more information, see the Forest Technician, Forest Technologist and Forester occupational profiles.

Employers may prefer applicants who have experience as a logging or forestry labourer. A chain saw certificate, defensive driving certificate, transportation of dangerous good permit or radio operator's licence is a definite asset.

Employment and Advancement

Wildland firefighters are employed by **Alberta Sustainable Resource Development** and contractors. Most are employed on a seasonal basis from early April through late August.

The province of Alberta maintains a complement of about 3,000 certified firefighters. Many move on to full-time work in other fields so employment turnover is high in this occupation.

Salary

(section revised OCTOBER 2005)

Rates of pay for certified wildland firefighters range from **$9.33 to $19.27 an hour (2004 figures).**

© Government of Alberta, Human Resources and Employment

Wireline Field Supervisor

Produced SEPTEMBER 2005

Wireline field supervisors direct the work of wireline operators and collect and process data from wireline operations.

NOC Number(s): 8222
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **D i o**

Duties

Wireline operations draw their name from the slender, flexible, metal cable used to lower special instruments into oil and gas wells. Different types of wirelines are required for different types of work.

Electric lines, often called e-lines, have a braided outer line with a wire running through the middle. Protected from the often harsh environment of a well, the wire conducts electricity from a mobile generator to power instruments attached to the end of the line. E-lines are used for operations such as production logging, perforating and pipe recovery.

Slicklines are used for temperature and pressure surveys, and downhole completion operations.

In general, wireline crews lower, operate and raise instruments, tools and equipment such as:

- sophisticated electrical logging equipment (e-line)
- perforating guns which, when detonated, perforate well casing and permit oil and gas to flow into the well (generally e-line)
- downhole plugs
- fishing tools used to retrieve broken or lost wire or equipment.

Prior to wireline operations, field supervisors:

- assess each unique situation
- anticipate problems
- determine the appropriate method to complete the job
- decide what equipment to use
- consult and co-ordinate their work with other supervisors and managers.

During wireline operations, field supervisors often work inside a mobile unit that houses complex computer equipment. From this unit, they direct wireline operators while they lower, raise and position the special instruments or tools. E-line supervisors also interpret data received during wireline operations and process data for permanent records. Slickline operators may provide downhole pressure information or fluid levels.

Precision and accuracy in the direction of wireline operations is extremely important and involves a great deal of skill.

Working Conditions

Wireline field supervisors work outdoors and in mobile units in the field. Their hours of work, the location of the job and the amount of travel required vary with the company and type of job contracted. Long hours and extensive travel are not uncommon. In Alberta, oil and gas wells may be located near major centres, around small communities or in remote areas.

Personal Characteristics

Wireline field supervisors need the following characteristics:

- good communication and interpersonal skills
- good organizational skills
- good decision-making skills and a willingness to accept responsibility for decisions

- the ability to direct the work of others and work effectively in a team environment.

They should enjoy supervising and co-ordinating the work of others, solving problems and working with tools, instruments, equipment and machinery.

Educational Requirements

Employers generally require wireline field supervisors to have at least two or three years of experience as wireline operators. E-line supervisors need a working knowledge of electrical circuits and load calculations.

New employees generally take courses in physics, interpretation, software, safety and general operating procedures, and work with experienced wireline operators and field engineers until they are qualified to run their own truck. It generally takes six to nine months before trainees are ready to break out (work without direct supervision).

For information about related two year diploma programs, see the Electrical Engineering Technologist, Electronics Engineering Technologist and Mechanical Engineering Technologist occupational profiles.

Employment and Advancement

(section revised JANUARY 2006)

Wireline field supervisors are employed by:

- companies that specialize in wireline activities
- oil field service companies that provide wireline services as part of their operation.

Wireline field supervisors usually start in junior positions and advance to the position of field supervisor.

Supervisors who are experienced and knowledgeable in wireline services may advance to the position of station manager and eventually to senior management. Or, wireline field supervisors may specialize in one area (e.g. wireline work in open hole or cased hole oil and gas wells or in production logging operations) and work as consultants for wireline service companies.

Wireline field supervisors may have the opportunity to work overseas to gain international experience in field work or management related work.

Wireline field supervisors are part of the larger National Occupational Classification 8222: Oil and Gas Drilling and Service Supervisors. In Alberta, most people employed in this classification work in the **Oil and Gas Extraction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment in the Oil and Gas Extraction industry (for example, demand for oil and gas products, technological changes)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 13,000 Albertans are employed in the Oil and Gas Drilling and Service Supervisors occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 280 to 420 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since wireline field supervisors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for wireline field supervisors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for wireline field supervisors vary considerably.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Oil and Gas Drilling and Service Supervisors occupational group working part-time or full-time earned from **$35,900 to $265,500 a year.** The average salary was **$87,600 a year.**

Word Processing Operator

Produced OCTOBER 2005

Word processing operators use computer programs to produce, store and print documents such as letters, reports and tables.

NOC Number(s): 1411
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O M i**

Duties

Working from hand written notes, printed copy or voice recordings, word processing operators:

- use a computer keyboard to enter text or data
- arrange documents in proper formats
- proofread and edit documents
- store and print documents
- electronically sort and compile text and numerical data
- prepare and update printouts such as invoices and reports
- maintain a filing and storage system for discs or tapes
- retrieve, update and merge documents as required.

Working Conditions

Word processing operators work in an office environment, often sitting for long periods of time. The work may be detailed and much of it is repetitious.

Most word processing operators work standard weekday hours. In large law firms, they may work evening or night shifts. Overtime may be required during busy periods.

Personal Characteristics

Word processing operators need the following characteristics:

- manual dexterity and the ability to concentrate
- the ability to pay attention to detail and proofread (see what is there as opposed to what should be there)
- good organizational skills and the ability to handle a variety of different projects and complete them on time
- the ability to work well with others particularly document authors.

They should enjoy:

- working with equipment such as computers, printers and scanners
- taking a methodical approach to compiling information
- experimenting with different ways to format documents.

Educational Requirements

Although there is no standard minimum education requirement for word processing operators, most employers require **at least high school graduation and a minimum typing speed of 60 words per minute with a high degree of accuracy.** Some employers require a minimum of 80 words per minute. Word processing operators also need:

- a good knowledge of grammar and punctuation, and how to organize and format documents such as reports, letters, charts and financial statements

- proficiency in the use of the latest word processing and related software
- the ability to import and combine information from one software application into another (e.g. import information from spreadsheets to word processing programs).

High school students who have the opportunity to learn word processing techniques may be able to find work as word processing operators after graduation. Some employers provide training on the job.

Colleges, technical institutes and private vocational schools throughout Alberta offer related full-time education programs and continuing education courses. For a listing of post-secondary institutions, see the Administrative Assistant occupational profile. Programs vary greatly in content, depth of study, duration, entrance requirements and cost. Prospective students should investigate program suitability and reputation before enroling in a program.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Word processing operators are employed in very large organizations and in word processing or secretarial companies that offer word processing services to the public.

Experienced word processing operators who have the required office skills may move into other clerical and administrative support positions, or advance to supervisory positions.

Word processing operators are part of the larger National Occupational Classification 1411: General Office Clerks. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Health Care and Social Assistance**
- **Public Administration**
- **Professional and Technical Services**
- **Finance, Insurance and Real Estate**
- **Management, Administrative and Other Support Services**
- **Educational Services**
- **Retail Trade**
- **Construction**
- **Transportation and Warehousing**
- **Wholesale Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 16,000 Albertans are employed in the General Office Clerks occupational group which is expected to grow 0.2 to 1.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 200 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since word processing operators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for word processing operators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for word processing operators vary greatly depending on location, the scope and complexity of the responsibilities involved, and the qualifications of the worker.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the General Office Clerks occupational group working part-time or full-time earned from **$11,300 to $138,500 a year.** The average salary was **$34,400 a year.**
